Applicable Requirements Summary

Unit Group Process ID No.	Unit Group Process Type	SOP Index No.	Pollutant	State Rule or Federal Regulation Name	Emission Limitation, Standard or Equipment Specification Citation	Textual Description (See Special Term and Condition 1.B.)	Monitoring And Testing Requirements	Recordkeeping Requirements (30 TAC § 122.144)	Reporting Requirements (30 TAC § 122.145)
			HAPS	Subpart FFFF	The permit holder shall comply with the applicable limitation, standard and/or equipment specification requirements of 40 CFR Part 63, Subpart FFFF	comply with the applicable requirements of 40 CFR Part 63, Subpart FFFF	shall comply with the applicable monitoring and testing requirements of 40 CFR Part 63, Subpart FFFF	comply with the applicable recordkeeping requirements of 40 CFR Part 63, Subpart FFFF	comply with the applicable reporting requirements of 40 CFR Part 63, Subpart FFFF

Commented [SD25]: See responses in Unresolved Items list regarding Periodic Monitoring.

Periodic Monitoring Summary

Unit/Group/Process Information	
ID No.: PT-CLEAN	
Control Device ID No.: N/A	Control Device Type: N/A
Applicable Regulatory Requirement	
Name: 30 TAC Chapter 115, Degreasing Processes	SOP Index No.: R5412-1
Pollutant: VOC	Main Standard: § 115.412(1)
Monitoring Information	
Indicator: Visual Inspection	
Minimum Frequency: Monthly	
Averaging Period: N/A	
Deviation Limit: Any monitoring data which indicates that the cold cleaner is not in compliance with the applicable requirements of 30 TAC § 115.412(1)(A)-(F) is a deviation.	
Periodic Monitoring Text: Inspect equipment and record data monthly to ensure compliance with any applicable requirements in § 115.412(1)(A)-(F). Any monitoring data which indicates that the cold cleaner is not in compliance with the applicable requirements of § 115.412(1)(A)-(F) shall be considered and reported as a deviation.	

Periodic Monitoring Summary

Unit/Group/Process Information	
ID No.: VS-178T	
Control Device ID No.: FL-2	Control Device Type: Flare
Applicable Regulatory Requirement	
Name: 40 CFR Part 60, Subpart Kb	SOP Index No.: 60KB-FLR2
Pollutant: VOC	Main Standard: [G]§ 60.112b(a)(3)
Monitoring Information	
Indicator: VOC Concentration	
Minimum Frequency: Once per year	
Averaging Period: N/A	
Deviation Limit: VOC concentration > 500 ppmv.	
Periodic Monitoring Text: Measure and record fugitive emissions from the vapor collection system in accordance with part 60, appendix A, method 21.	

Periodic Monitoring Summary

Unit/Group/Process Information	
ID No.: VS-178T	
Control Device ID No.: FL-2	Control Device Type: Flare
Applicable Regulatory Requirement	
Name: 40 CFR Part 60, Subpart Kb	SOP Index No.: 60KB-FLR2
Pollutant: VOC	Main Standard: [G]§ 60.112b(a)(3)
Monitoring Information	
Indicator: Visual Inspection	
Minimum Frequency: Once per year	
Averaging Period: N/A	
Deviation Limit: Inspections not conducted, or defects discovered and not repaired.	
Periodic Monitoring Text: Visually inspect all components of the vapor collection system for defects, such as cracks, holes, gaps, loose connections, or broken or missing covers or other closure devices, that could result in air emissions.	

Periodic Monitoring Summary

Unit/Group/Process Information	
ID No.: VS-178T	
Control Device ID No.: TOX	Control Device Type: Thermal incinerator (direct flame incinerator/regenerative thermal oxidizer)
Applicable Regulatory Requirement	
Name: 40 CFR Part 60, Subpart Kb	SOP Index No.: 60KB-TOX
Pollutant: VOC	Main Standard: [G]§ 60.112b(a)(3)
Monitoring Information	
Indicator: Combustion Temperature / Exhaust Gas Temperature	
Minimum Frequency: Once per week	
Averaging Period: N/A	
Deviation Limit: Minimum combustion temperature of 1,800 degrees F.	
Periodic Monitoring Text: Measure and record the combustion temperature in the combustion chamber or immediately downstream of the combustion chamber. The monitoring instrumentation shall be maintained, calibrated and operated in accordance with manufacturer's specifications or other written procedures. Any monitoring data below the minimum limit shall be considered and reported as a deviation.	

Periodic Monitoring Summary

Unit/Group/Process Information	
ID No.: VS-178T	
Control Device ID No.: TOX	Control Device Type: Thermal incinerator (direct flame incinerator/regenerative thermal oxidizer)
Applicable Regulatory Requirement	
Name: 40 CFR Part 60, Subpart Kb	SOP Index No.: 60KB-TOX
Pollutant: VOC	Main Standard: [G]§ 60.112b(a)(3)
Monitoring Information	
Indicator: VOC Concentration	
Minimum Frequency: Once per year	
Averaging Period: N/A	
Deviation Limit: VOC concentration > 500 ppmv.	
Periodic Monitoring Text: Measure and record fugitive emissions from the vapor collection system in accordance with part 60, appendix A, method 21.	

Periodic Monitoring Summary

Unit/Group/Process Information	
ID No.: VS-178T	
Control Device ID No.: TOX	Control Device Type: Thermal incinerator (direct flame incinerator/regenerative thermal oxidizer)
Applicable Regulatory Requirement	
Name: 40 CFR Part 60, Subpart Kb	SOP Index No.: 60KB-TOX

Schedules

Compliance Schedule

A. Compliance Schedule

1. Specific Non-Compliance Situation

Unit/Group/ Process ID. No(s).	SOP Index No.	Pollutant	Applicable Requirement	
			Citation	Text Description
Site-wide	N/A	112(B) HAPS	63.2485(a)	Requires compliance with Table 7 control requirements for Group 1 wastewater streams

2. Compliance Status Assessment Method and Records Location

Compliance Status Assessment Method		Location of Records/Documentation
Citation	Text Description	
63.144(b)(5) and 63.2485(a)-Table 7	EPA sampling method 8260B and applicable Group 1 wastewater requirements in 63.132-63.148.	2nd quarter sampling report kept onsite

3. Non-compliance Situation Description

As previously noted in a disclosure of violations under the Texas Environmental, Health, and Safety Audit Privilege Act ("Audit Privilege Act"), Line 1 and 2 Group 1 and Group 2 definitions were not redefined/re-evaluated after modifications; Lines 1 and 2 have not complied with Group 1 requirements. Similarly, Line 3 sources were not defined as Group 1 or Group 2; Line 3 has not complied with Group 1 requirements.

4. Corrective Action Plan Description

A detailed study of the MON requirements is currently in progress. Sampling is diligently being performed to determine MON applicability. Preliminary results appear to indicate that changes will be required that can only be implemented during a shutdown. The next shutdown is scheduled to be completed by September 30, 2021.

5. List of Activities/Milestones to Implement the Corrective Action Plan

1	Consistent with the dates discussed in Noltex's disclosures of violation and subsequent quarterly reports under the Audit Act, corrective actions will be implemented during the next shutdown which is scheduled to be completed by September 30, 2021.
2	Noltex shall submit a confirmation letter to TCEQ once the corrective action plan is completed.
3	Within 60 days of the completion of all necessary corrective actions at the site, Noltex shall submit a Title V revision application to incorporate any additional applicable requirements for these sources that have not yet been included in the permit.

6. Previously Submitted Compliance Plan(s)	Type of Action	Date Submitted
	N/A	

7. Progress Report Submission Schedule	40 CFR 70 progress reports: every 6 months Audit privilege act quarterly reports: every 90 days

Appendix A

Acronym List

The following abbreviations or acronyms may be used in this permit:

ACFM ..... actual cubic feet per minute
AMOC ..... alternate means of control
ARP ..... Acid Rain Program
ASTM ..... American Society of Testing and Materials
B/PA ..... Beaumont/Port Arthur (nonattainment area)
CAM ..... Compliance Assurance Monitoring
CD ..... control device
CEMS ..... continuous emissions monitoring system
CFR ..... Code of Federal Regulations
COMS ..... continuous opacity monitoring system
CVS ..... closed vent system
D/FW ..... Dallas/Fort Worth (nonattainment area)
EP ..... emission point
EPA ..... U.S. Environmental Protection Agency
EU ..... emission unit
FCAA Amendments ..... Federal Clean Air Act Amendments
FOP ..... federal operating permit
gr/100 scf ..... grains per 100 standard cubic feet
HAP ..... hazardous air pollutant
H/G/B ..... Houston/Galveston/Brazoria (nonattainment area)
H_2S ..... hydrogen sulfide
ID No. ..... identification number
lb/hr ..... pound(s) per hour
MACT ..... Maximum Achievable Control Technology (40 CFR Part 63)
MMBtu/hr ..... Million British thermal units per hour
NA ..... nonattainment
N/A ..... not applicable
NADB ..... National Allowance Data Base
NESHAP ..... National Emission Standards for Hazardous Air Pollutants (40 CFR Part 61)
NO_x ..... nitrogen oxides
NSPS ..... New Source Performance Standard (40 CFR Part 60)
NSR ..... New Source Review
ORIS ..... Office of Regulatory Information Systems
Pb ..... lead
PBR ..... Permit By Rule
PEMS ..... predictive emissions monitoring system
PM ..... particulate matter
ppmv ..... parts per million by volume
PRO ..... process unit
PSD ..... prevention of significant deterioration
psia ..... pounds per square inch absolute
SIP ..... state implementation plan
SO_2 ..... sulfur dioxide
TCEQ ..... Texas Commission on Environmental Quality
TSP ..... total suspended particulate
TVP ..... true vapor pressure
U.S.C. ..... United States Code
VOC ..... volatile organic compound

FOP O1301 Permit Renewal TCEQ Response (3-28-2021)

Follow Up Flag: Follow up
Flag Status: Flagged

Categories: Red Category

Stuart,

Attached is a revised draft permit implementing the WDP comments as well as changes from your responses to my unresolved item list. Also attached is a document addressing the changes to the draft. The majority of that document just describes the change or confirms that issues are resolved. Five items in the document (#1-2, 12, and 16-17) require or could potentially require additional information to be submitted.

I will begin preparing the file for public notice. Besides a response to the documents attached, there are two things I need from you all:

1. A public notice location. The applicant listed TCEQ Region 12, but our regional offices are currently closed to the public, and may not be available yet during your notice. Therefore, another location is needed.
2. OP-CRO1 certifying application updates made over the course of the project. The first correspondence I have from you all was the email on 6/26/2020 about the additional changes that were going to be submitted, so I'd recommend using the Time Period option, with a start date of 6/26/2020 and an end date of when you respond. That range should cover the other submittals that have been made. Please note that in the attached document, there are a few items where you may be submitting additional information, so if you would like to wait until those items are resolved, to ensure that only one OP-CRO1 needs to be obtained, that would be acceptable.

Please respond to the revised draft and provide this information by **Monday, April 5, 2021**. If you are including the OP-CRO1 at that time, you can email me a copy to meet the deadline, but please follow up with the original OP-CRO1 in the mail.

Feel free to email with any questions. We can also arrange a phone call or virtual meeting over MS Teams if needed.

Sincerely,

Carolyn Maus, P.E.

Subject: RE: Working Draft Permit -- FOP O1301/Project 29817, Noltex, L.L.C., EVOH Copolymer Facility

Thanks, Stuart! I will be going through your response and revising the WDP as needed. If I need anything further to resolve any of the items, I will let you know.

I'll be taking some vacation time over the next two weeks so I will dive into this when I return on January 4.

Subject: RE: Working Draft Permit -- FOP O1301/Project 29817, Noltex, L.L.C., EVOH Copolymer Facility

Carolyn,

Thanks for all of your hard work preparing the Working Draft Permit. You were correct, it did take awhile to go through the Unresolved Items list and the Working Draft Permit.

Please find attached the following:

1. Working Draft Permit with Noltex comments.
2. Unresolved Items list with Noltex responses.
3. Revised forms as related to responses on the Unresolved Items list and addition of two (2) emission units that were inadvertently left off of the forms submitted for the renewal/revision. Only items that changed on the forms are submitted, with the exception of the entire OP-REQ1 form, as noted in the WDP guidance. The two (2) additional units are:
   a. GC3 – Analyzer Vent
   b. L3-72-3 – Fluidized Bed Dryer Exhaust Air Filter (Line 3)

Regarding submittal of the Certification by Responsible Official (Form OP-CRO1), Noltex prefers to wait to submit this certification for the application updates and the Working Draft Permit until changes from the comments have been completed.

Let us know if you have any additional questions or comments.

Thanks,

Stuart

Stuart Doss

Subject: Working Draft Permit -- FOP O1301/Project 29817, Noltex, L.L.C., EVOH Copolymer Facility

Hi Stuart,

I have conducted a technical review of the significant revision application and the updated renewal application forms for Noltex, L.L.C, EVOH Copolymer Facility. An electronic copy of the Working Draft Permit (WDP) is attached for your review. This WDP contains the TCEQ determination of applicable requirements based on the information submitted in your application, and any updates provided. My apologies for the extreme delay since receiving your updated materials in August – the updates were much more extensive than I had anticipated. I've also been involved with some internal process improvement initiatives that took away a lot of my application review time.

Please review the WDP and submit to me any comments you have on the working draft permit by **Friday, December 18, 2020**. In addition, please address the questions on the attached Unresolved Items list. Please submit a written response by this deadline, even if you are not making any comments on the content of the WDP. We had originally agreed that Noltex would review the draft in two weeks, but I've tacked on an extra week due to the increased size of the permit and the number of questions I included. We can certainly adjust the timeline further if that's not sufficient.

The third attachment is a draft version of the public notice letter. Since Noltex has agreed to publish notice quickly once we actually send out the public notice package, I wanted to give you an advance copy so that they can begin preparing the signs and making preliminary publication arrangements. The sign format is included in the letter and will not change. The notice itself is also included, but there will still be two updates to it. The Notice Issuance Date at the end will be the date we sent out the letter, which I have marked TBD for now. Second, I'll need another public notice location from Noltex. The application listed TCEQ Region 12, but our regional offices are currently closed to the public, and may not be available yet during your notice. I've marked that spot as TBD in the notice too. The public notice letter is just for planning

purposes. We still need to go through the WDP review process before we send out the official notice letter, so do not actually publish anything at this time.

Please review the second portion of the "SOP Technical Review Fact Sheet" located at http://www.tceq.texas.gov/assets/public/permitting/air/Guidance/Title_V/sop_wdp_factsheet.pdf. This guidance contains important information regarding WDP review and comment procedures.

Note that a Certification by Responsible Official (Form OP-CRO1) for any uncertified application information, including application updates supporting the WDP comments, is typically required to be submitted with your response to this email. After final review of the WDP, additional changes supported by application updates may require certification. I will advise you of these changes at a later date. Upon final approval of the Public Notice/Announcement Authorization Package, a duly signed OP-CRO1 form may be required which includes the specific dates or time period of all submitted application documentation that was not previously certified. Therefore, if you wish to wait on submitting the OP-CRO1 until we resolve the WDP comments, that would also be acceptable.

Contact me if you have any questions regarding the guidelines, the project schedule, or any other details regarding your application or permit.

Thank you for your cooperation.

Sincerely,

Carolyn Maus, P.E.

Response to Unresolved Item Answers (Items 1-19) and WDP Comments (Items 20-29) – Permit O1301, Project 29817

1. In addition to Keith Hamilton, our database also lists Kathy Cameron as a technical contact. Should Kathy Cameron be removed or is she still a valid contact? (It is fine to have multiple people listed.)
   Kathy Cameron is no longer with Noltex, so she may be removed and replaced with Laura Burnett. Let us know if you need any additional contact information for Laura Burnett.
   TCEQ Response: This is the information I have for Laura based on the NSR database – if anything needs to be updated, please let me know.
   Laura Burnett, Senior Environmental Engineer, Noltex L.L.C.
   12220 Strang Rd, La Porte, TX 77571-9740
   Phone: (281) 842-5039
   Fax: (281) 842-5097
   Email: laura_burnett@noltex.com
2. For the compliance plan, I've adjusted/added language in the milestones and added some citations pertaining to the Group 1 requirements. These are just for clarity. Otherwise, the plan is acceptable. If you have any questions about the adjustments I made or would like further changes, please let me know.
   Noltex has completed the MON analysis and all documentation. No further action is required. They are currently in compliance with the applicable MON requirements. The compliance plan can be removed from the permit. Let us know if you need anything else from us.
   TCEQ Response: I have removed the compliance plan from the permit. Please submit an OP-ACPS indicating there are no units out of compliance.
3. OP-REQ1 Corrections/Clarifications Needed
   a. Question I.A.4 was answered as "Yes". What that means is that each vent subject to Chapter 111, Visible Emissions has been listed as a unit on the OP-SUM, Tables 1a-1b of Form OP-UA15, and the OP-MON if monitoring is needed, and each vent will appear as a unit in the permit. The existing permit had our Special Terms and Conditions for vents subject to 111.111(a)(1)(B) rather than listing these vents as units. For now, I left I.A.4 as "No" and included these site-wide terms. If you did intend for I.A.4 to be "Yes", please provide the unit-specific forms mentioned for all 111.111(a)(1)(B) vents.
      Question I.A.4 on the OP-REQ1 Form should be "No", because each vent is not meant to be addressed individually.
   b. Question VIII.GG.1 should be "Yes" and Question VIII.GG.2 should say "Subpart ZZZZ". (EMGEN2 has limited requirement under this rule.)
      Correct.
      TCEQ Response for 3.a-b: Thanks – I have updated our database accordingly.
   c. Question XI.J.3 was previously "No" but was now left blank. Please provide answer.
      This was discussed with Laura Burnett at Noltex. Although the site previously generated VOC credits for replacement of an existing control device with a control device with a higher DRE, the generated credits have already been banked and sold. Given that the site does not currently participate in the Banking and Trading Program, the answers to Questions XI.J.2 and XI.J.3 should both be "No". The corrected OP-REQ1 Form with changes marked using track changes is attached to the email response. Let us know if you need any additional information.
      TCEQ Response: I have updated the permit terms based on the revised answers.
   d. Section XII.H should list NSR permit 19074 with its latest issuance date. Please submit a corrected page.
      The corrected OP-REQ1 Form with changes marked using track changes is attached to the email response.
      TCEQ Response: Thanks – no further information needed.

e. The NSR database now includes two active PBR registrations for this site - #160783 and #163036 – for PBRs 106.261 and 106.262. Please include these two PBRs in section XII.I. Also, please let me know if any units are authorized by this registration so I can include the registration number in the permit. Finally, please update the OP-PBRSUP if needed.
PBR 160783 is an annual registration for fugitive equipment components added at the site. The only emission units affected by this PBR are the fugitive component emission units at the site (VS-93 and L3-93-3), which are already included in the Title V Permit.
PBR 163036 is an authorization for an addition to the Line 2 process which includes several process vessels which do not vent to atmosphere and are controlled by control devices authorized under the NSR Permit 19074. This authorization also includes additional fugitive components added to VS-93, which is already included in the Title V Permit. The VS-UWC1 process vessel is controlled by control devices TOX, VS-62C, and FL-2. The VS-UWC2, VS-UWC3, and VS-UWC4 process vessels are controlled by control device RTO.
Both of these PBRs are expected to be incorporated into the NSR Permit at the next amendment/renewal. A revised OP-PBRSUP Form is attached to the email response.
TCEQ Response: The PBRs and registration numbers have been added to units V-93 and L3-93F-3 in the permit.

4. OP-SUMR Clarifications Needed
   a. The unit name for VS-23T-1 is listed as "Waste Organics Tank", which is already the name for VS-23T. Previously VS-23T-1 had a different name, so please confirm you'd like the same name for both tanks.
   VS-23T should remain the Waste Organics Tank. VS-23T-1 should be the VAC Storage Tank. In addition, Noltex requests that the name of unit ID VS-61T be changed from #2 Waste Organics Tank to Multipurpose Tank to match the name used at the site for this tank.
   TCEQ Response: The tank names have been updated in the permit.
   b. Previously VS-220T was "Polymerization Reactor (Line 2) and VS-220T-1 was "Polymerization Reactor (Line 1)". This OP-SUMR has the Line 2 and Line 1 labels flipped now. Also, the OP-2 requests a completely different name - "Stripper O/H Condenser" - for both units. Please confirm the names you'd like me to use.
   VS-220T should be Polymerization Reactor (Line 2). VS-220T-1 should be Polymerization Reactor (Line 1). The other name must have been a typo on the OP-SUMR.
   TCEQ Response: Thanks for the confirmation – tank names are correct in the permit.
   c. There are existing units VS-34 and VS-34-T1 on UA-15. The OP-2/OP-SUMR showed new units VS-34T and VS-34T-1 being added. Based on unit names, it seemed like these were the same as the existing units, so I just updated the old unit IDs (as well as the OP-UA and OP-REQ2 data). However, let me know if there should really be four units (VS-34, VS-34T, VS-34-T1, and VS-34T-1).
   You are correct, there are only 2 units. Mistake in marking them as new on the OP-SUMR.
   d. Significant revision application had "-20C Brine Storage Tank (Line 3)" for VE-025 and "+5C Brine Storage Tank (Line 3) for VE-020. Renewal application had "+5 deg Refrig Unit Tank (Line 3)" for VE-025 and "-20 deg Refrig Unit Tank (Line 3)" for VE-020. I used the newer information from the renewal application, but please confirm which unit names are correct.
   Please use the names in the renewal application are correct as reflected in the current Working Draft Permit.
   TCEQ Response to 4.c-d: Thanks for clarifying – no changes were needed in the permit.
   e. Renewal application didn't mention changing unit name for TRUCKLOAD, but OP-SUMR had "Truck Loading Liquid" while existing unit had "Truck Liquid Loading" (matching NSR permit name). I updated to new information but let me know if that isn't correct.
   Please name it Truck Liquid Loading to match the NSR.
   TCEQ Response: Unit name has been updated in the permit.
   f. FL-2 was not on OP-SUMR. I used "EVOH Flare" for unit name since that's what NSR MAERT has, but let me know if you'd like a different unit name.
   Yes FL-2 should be EVOH Flare.
   TCEQ Response: Thanks for clarifying - no changes were needed in the permit.

5. I removed the units from the permit with no applicability as requested on the renewal OP-2 (revision numbers 101-110 and 114). If we need to document any negative applicability UA data, please provide that. Otherwise, these units will also be removed from our database.
   Yes, these units need to be removed from the permit as they are not the final vent sources to control for applicability of vent source rules. There are other units after these units that vent gas directly to control and those units are included in the permit revisions. I don't believe any negative applicability is required; please let me know if you believe otherwise.
   Notes: Thanks for the explanation. You are correct that I do not need anything further for these units.
6. The OP-2 requested to add multiple units whose only data is on the OP-PBRSUP (revision numbers 127 and 141-152). To clarify, "unit IDs" that are needed for the purpose of filling out the OP-PBRSUP only and do not have any unit attribute data, OP-REQ2 data, etc. will not be included in our database or permit. These do not need to be listed on any other application forms besides the OP-PBRSUP. I don't need any further information about these, but just wanted to point this out for future applications. Let me know if you have any questions.
   Thanks, my assumption was that any unit required to be listed on a form was required to be included in the permit. I didn't see anything about PBR requirements in the Working Draft Permit other than the General Condition PBR compliance requirement in the New Source Review Authorization Requirements, which is the same as the existing permit. Just curious, does any information submitted on the OP-PBRSUP get included in the Title V Permit?
   TCEQ Response: The OP-PBRSUP is intended to be a comprehensive list of all sources authorized by PBRS and is kept in the permit file. In the Title V permit, we have a reference to the PBR Supplemental Table in the permit terms now. However, we have not changed our policies about what emission units will be included in the permit (those with applicable requirements or permit shields). For units that are already appearing in the permit for other reasons and are authorized by a registered PBR, we add the registration numbers to the NSR Authorization References by Emission Unit table, based on what is identified on the OP-SUMR. Therefore, the PBR-authorized units on the OP-SUMR and in the Title V permit will generally be a subset of those identified on the OP-PBRSUP. For the OP-SUMR, you should just continue to include on it the units you would have listed in the past (those with applicable requirements, permit shields, or simply negative applicability documentation on the UA forms), and provide the registration number for any of those using a PBR registration. Hope that clears up the situation!
7. For TTANK, the revision application included a permit shield request for Chapter 115. Did you also want to address NSPS Kb? (A permit shield is optional, but I noticed that many other units had both.)
   Yes please include a permit shield for NSPS Kb based on capacity of tank less than 75 m^3.
   TCEQ Response: A permit shield has been added to the permit.
8. There are some tanks that have Chapter 115 Vent Gas requirements (as well as permit shields for Chapter 115, Storage of VOCs and NSPS Kb stating that the tanks are process vessels), but then they also have MACT FFFF storage tank requirements. The unit IDs are L3-26T-3, L3-28T-3, VE-701, VS-23T-1, VS-26T-1, VS-28T, VS-28T-1, VS-32T, and VS-43T. Please clarify the applicable requirements for these tanks and provided updated unit attribute forms, if needed. It seems like one of the two scenarios below would be appropriate. (Also, once this is straightened out, there may be questions below for some of these IDs that will become irrelevant.)
   a. If these are process vessels (and the Chapter 115 vent gas requirements apply), then storage tank requirements from MACT FFFF would <u>not</u> apply, and they might need MACT FFFF process vent requirements instead?
      These vessels are bottoms receivers or surge control vessels within a continuous operation as defined in MACT FFFF. Bottoms receivers and surge control vessels are not defined as storage tanks in MACT FFFF. However, since the capacity of these bottoms receivers/surge control vessels meet the capacity and vapor pressure thresholds for a Group 1 storage tank they must meets the emission limits and work practice standards in MACT FFFF Table 4, per 40 CFR 63.2450(r). Since these are vessels integral to the process and are not defined as storage tanks in MACT FFFF, they do not meet the definition of storage tank in 30 TAC Chapter 115. Therefore, the emissions from these vessels are considered process vents under 30 TAC Chapter 115. In addition, the definition of process tank in NSPS Kb includes the following: "…In many process tanks, unit operations such as reactions and blending are conducted. Other process tanks, such as surge control vessels and bottoms receivers, however, may not involve unit operations."

TCEQ Response for 8.a-b: Thank you – that explanation clears things up. No changes needed to the permit.

b. On the other hand, if these are storage tanks, then wouldn't Chapter 115, Storage of VOCs apply instead of Chapter 115 Vent Gas? And might they also need applicable requirements from NSPS Kb?
Please see description above.

9. OP-UA3 Clarifications Needed:
   a. Index R5112-1.5+ATOX (Table 4b) had control devices TOX and RTO listed for L3-63T-3 and VE-451, respectively, in the revision application. The Control Device Type was OTHER. Based on data for many other units in the updated renewal forms that use these control devices, I changed this type to DIRINC. Please confirm. (Also, for VE-451, Table 4a had R5112-1.5+ARTO while Table 4b had R5112-1.5+ATOX. I used the RTO index in the permit to match the control device ID, but please let me know if you want the TOX index instead.)
   The vent for VE-451 is routed to the RTO only, so only the RTO should be included for the control device for this emission unit and the Control Device Type should be DIRINC. This information was verified as part of the TAPA audit for the facility.
   Unit L3-63T-3 (Caustic Make-up Tank) was added from the 2019 significant revision information; however, it was later confirmed that this tank does not exist. Please remove unit L3-63T-3 from the permit.
   TCEQ Response: L3-63T-3 has been removed from the permit. The flare scenarios have been removed for VE-451, as also requested in WDP comments.
   b. For L3-63T-3, index R5112-1.5+AFLR was missing from Table 4a in the revision application, but it did appear on Table 4b. I used the same Table 4a data as the rest of the index numbers for this unit but let me know if you did not intend to include the flare operating scenario at all.
   Unit L3-63T-3 (Caustic Make-up Tank) was added from the 2019 significant revision information; however, it was later confirmed that this tank does not exist. Please remove unit L3-63T-3 from the permit.
   TCEQ Response: Removed - see above.
   c. VS-118T was missing an answer for Maximum TVP on Table 3 (NSPS Kb). I used the "0.5-0.75" code for now to match the existing data. Please confirm. Also, since the capacity has been updated to "40K+", did you want to revise the SOP index number? It is currently still 60KB-20K-.
   Maximum TVP for VS-118T should be 0.5-0.75. Yes please update the SOP Index number to 60KB-40K+FR.
   TCEQ Response: SOP index number has been updated.
   d. VS-73T had SOP index number R5112-VS67 on Table 4a (Chapter 115) but had R5112-VS62C on Table 4b. I used R5112-VS62C based on the control device, but please confirm.
   The correct SOP Index number is R5112-VS62C.
   TCEQ Response for 9.d-f: Thanks – nothing further is needed.
   e. VS-473 had SOP index number R5112-VS62C-3 on Table 4b for the scenario using flare FL-2 and R5112-VS67-3 for the scenario using flare VS-62C. I corrected those to R5112-FLR2-3 and R5112-VS62C-3 to match Table 4a.
   Yes the SOP Index numbers should match those on Table 4a.
   f. Table 21e (MACT FFFF) uses SOP index number 63FFFF-76-TOX for all units for the incinerator scenario. However, Table 21a uses 63FFFF-76-CD95 for some of these (VS-178T, VS-23T-1, VS-33T, VS-60T, VS-61T, VS-26T, VS-26T-1, VS-28T, VS-28T-1, VS-32T, VS-43T, VE-701, VS-174P). For now, I just used 63FFFF-76-TOX since that seemed to match format from other rules. Please confirm.
   Yes all of the SOP index numbers for the TOX control device should be 63FFFF-76-TOX.
   g. Table 21f (MACT FFFF) was not submitted. This table is needed for all units for the incinerator scenario. I've selected answers for now based on what process vents used on UA-15, but please fill out this table so I can confirm or update the permit.
   The answers from OP-UA15 do apply. A completed OP-UA3 Table 21f is attached to the email response.
   TCEQ Response: Thanks for confirming. No changes were needed for the permit.

10. OP-UA7 Clarifications Needed
   a. Is FL-2 subject to the flare requirements in Chapter 111.111? If so, please submit the Chapter 111 table.
   FL-2 is not an acid gas flare and not used for emergency/upset conditions only. A completed OP-UA7 Table 1 is attached to the email response.
   TCEQ Response: Requirements have been added to the permit for FL-2 and VS-62C based on updated form.

b. There is a 15-character limit for SOP index numbers, so for flares VS-62C and FL-2, I had to adjust the index numbers for Chapter 115, HRVOC. I just removed the second dash. Let me know if that's acceptable.
Yes that change to the index number is acceptable.
TCEQ Response: Thanks – nothing further needed.

c. FL-2 needs answer for the "Tank Service" question on Table 5b. For now, I selected "No".
The correct answer is "No". It seems that the OP-UA7 form sent on August 14, 2020 had this question marked "No" so I am not sure what happened.
TCEQ Response: That was just my mistake – nothing further needed.

11. Fugitive unit L3-93F-3 has fugitive requirements from Chapter 115, Subchapter H (HRVOC). However, units subject to that portion of the rule must still also comply with Chapter 115, Subchapter D. Please submit Tables 2a-2k, as applicable, of UA-12.
The completed OP-UA12 Tables 2a-2k are attached to the email response. The applicable requirements for unit L3-93F-3 as related to Chapter 115, Subchapter D should be the same as the current applicable requirements for unit VS-93 fugitives.
TCEQ Response: Requirements have been added for L3-93F-3.
12. For COOLTOW and COOLTOW2, Table 2 of UA-13 indicates that the units are using an alternative monitoring/testing method per 115.764(f). Please provide a copy of the approval letter from TCEQ.
It is our understanding that an AMOC request was submitted when the HRVOC rules were first finalized. However, we have not been able to locate the letter in the TCEQ's online file room. Do you have any suggestions of who we should contact at the TCEQ to see if they can locate the letter? If it can't be found, we will resubmit an AMOC request.
TCEQ Response: I was also unable to find any record of it in the online file room. I went through several NSR and Title V application files from past projects to see if it might have been addressed within one of those projects, but I did not see anything. You could contact Anne Inman (anne.inman@tceq.texas.gov), who currently reviews/approves AMOC requests, to see if she has additional recommendations, but I think it is likely that the request will need to be submitted again.
13. For units VE-801 and VS-130P, the MACT FFFF tables of UA-14 have "TBLE35" for Unit Category, but they have "YES" for Process Wastewater. "TBLE35" is for sources subject to the requirements in 63.149 for liquid streams in open systems. The streams subject to 63.149 would otherwise be classified as wastewater due to flowrate/concentration if they had been discarded from the process (see wastewater definition in 63.101), but they are still within the process so are not classified as wastewater. Therefore, "TBLE35" would only be appropriate if Process Wastewater was "No". Please confirm which situation is correct for these units:
    a. "TBLE35" is correct for Unit Category. Process Wastewater should be "NO" and Meets 40 CFR 63.149(d) should be "YES".
    b. "YES" is correct for Process Wastewater. Unit Category should be "O/WSEP", and Control Requirement should be "COVER". In this situation, an answer would also be needed for Combination of Control Devices.
    This is the correct scenario. A revised OP-UA14 is attached to the email response.
    TCEQ Response: Permit has been updated based on the corrected attributes.
14. OP-UA15 Clarifications Needed. Also, for any updates affecting units in groups, please do not list all the individual group members on the UA form. Grouped units should use the group ID. This streamlines the form itself as well as the review time and reduces potential for errors.
    a. For VE-020 and VE-025, the revision application used index 63FFFF-VE020 and 63FFFF-VE025, respectively, on Table 13a of OP-UA15. Then Table 13b used 63FFFF-ATM for both units. Please confirm which you'd like.
    Use the index numbers 63FFFF-VE020 and 63FFFF-VE025.
    TCEQ Response: Thanks – no change needed to permit.
    b. There is an existing unit MSSVENTS with limited requirements under Chapter 115, Vent Gas Control. I wanted to check – if this just covers additional emissions from other vents during MSS activities, then it should not be listed as a separate unit ID for the Title V permit.

Unit ID MSSVENTS needs to be removed from the permit. Based on further review this was a source that was proposed to be included in the NSR permit in the past, but MSS from these operations are now covered under PBR 106.263.

TCEQ Response: MSSVENTS has been removed from the permit.

c. Some of the units with control requirements for Chapter 115, Vent Gas had index R5127-TOX on Tables 2a-2c. Based on other similar units, I changed to R5121-TOX. This was for units RES-1, RGT-2, TA-004, VS-23T-1, VS-43T, VS-220T-1, VS-220T, VS-28T, VS-28T-1, VS-32T, and RE-101. Please confirm.

Yes that is correct, the index number for units that require control should start with R5121.

TCEQ Response for 14.c-d: Thanks – nothing further needed.

d. Some of the units with exemptions for Chapter 115, Vent Gas had index numbers starting with R5121 on Table 2a. Based on other similar units, I changed this to R5127. This was for units VS-258, VS-68, VS-68-1, VS-72, VS-72-1, VS-34T, and VS-34T-1. Please confirm.

Yes that is correct, the index number for units with exemptions should start with R5127.

e. Chapter 115, Vent Gas tables listed a unit ID VE-451. However, OP-2, OP-SUMR, and OP-REQ2 listed units ID VE-415. I used VE-415 for now, but please confirm.

VE-415 is a typo, should be VE-451.

TCEQ Response: Unit ID has been updated in the permit, as also requested in WDP comments.

f. On Tables 4a-4b, units L1-WBATH, L2-WBATH, and L3-WBATH use one index number, R5121-RTO. However, the Control Device Type and Control Device ID No. on Table 4b was "DIRFLM" and "TOX" for L1-WBATH; "FLARE" and "FL-2" for L2-WBATH; and "FLARE" and "VS-62C" for L3-WBATH. I'm guessing this was a copy/paste error from the other units with three scenarios. For now, I used "DIRFLM" and "RTO" for all three units. Please confirm the correct data.

Yes this was a cut/paste error in the Table 2b. The index number for all should be R5121-RTO and DIRFLM and RTO for Control Device Type and Control Device ID No. are correct for all.

TCEQ Response: Thanks – nothing further is needed.

15. OP-UA15/OP-UA17/OP-UA48 Clarifications Needed. Also, for any updates, please do not list all the individual group members on the UA form. Grouped units should use the group ID. This streamlines the form itself as well as the review time and reduces potential for errors.

a. On UA-48, GRP-RRR has three index numbers (60RRR-8-TOX, 60RRR-8-FL2, and 60RRR-8-VS62C) where the answer to "Subject to Title 40 CFR Part 60, Subpart NNN" is "Yes", yet instead of stopping per the form instructions, the remaining questions on Tables 2a-2c are filled out. Therefore, I just wanted to make sure the answer to this NNN question is correct. If "Yes" is correct, no further data is needed after that point since most of NSPS RRR will not apply. You could also opt to use a single index number instead of three, since the control device usage won't matter. Please confirm data and let me know if you'd like to consolidate these index numbers.

Upon further review it was determined that the vent streams from the reactors are not routed to a distillation unit, but are routed to control. So, the answer to Subject to Title 40 CFR Part 60, Subpart NNN is "No". Therefore, a revised OP-UA48 Form is attached to the email response.

TCEQ Response for 15.a-b: Permit has been updated based on revised attributes.

b. Also, if the "Subject to Title 40 CFR Part 60, Subpart NNN" answer for those three scenarios is correct as "Yes", does GRP-RRR need to have a scenario identified on UA-17 for NSPS NNN? (Or are the NSPS NNN requirements for these vents addressed under different units already?)

As stated in response to Item 15.a, the answer to Subject to Title 40 CFR Part 60, Subpart NNN is "No". Therefore, no NSPS NNN scenario is required on Form OP-UA17 for GRP-RRR.

c. Since GRP-RRR has a scenario on UA-48, index 60RRR-GP3R, where "TRE Index Value" is "8+", shouldn't GRP-RRR also have a corresponding scenario on UA-15 for Chapter 115, Vent Gas where "40 CFR Part 60, Subpart RRR Requirements" is "Yes"? Right now, the Chapter 115 form only appears to represent all the scenarios where the TRE value is less than 8.0.

As stated in response to Item 15.a, the vent streams from the reactors in GRP-RRR are only directed to control. Because of this index 60RRR-GP3R and the TRE Index Value of 8+ are no longer applicable and should be

removed. Therefore, a Chapter 115 scenario where the TRE Index Value is 8+ on OP-UA15 is not required. A revised Form OP-UA48 removing the Index 60RRR-GP3R is attached to the email response.

TCEQ Response: Index 60RRR-GP3R has been removed from the permit.

d. Besides the Chapter 115 and MACT FFFF data on UA-15, GRP-RRRNNN currently has NSPS NNN data on UA-17. Does it also need data on UA-48 for NSPS RRR?

Yes data is provided on the Form OP-UA48 attached to the email response for GRP-RRRNNN.

TCEQ Response: Requirements have been added to the permit.

16. PT-CLEAN will need periodic monitoring for Chapter 115, Degreasing Processes. For now, I have used option PM-V-052 with a deviation limit commonly used by other applicants. Please submit an OP-MON to confirm this is acceptable or propose other monitoring. I have also corrected the SOP index number from R5442-1 to R5412-1, since 115.442 is from different division of the rule.

A completed case-by-case OP-MON for unit PT-CLEAN is attached to the email response.

TCEQ Response: Periodic monitoring has been added to the permit. I had to adjust the deviation limit to meet our 250-character limit, but I kept all the key points. Please let me know if it is acceptable.

17. VS-33T and VS-178T will need periodic monitoring for NSPS Kb, as follows.
    a. Index numbers 60KB-FLR2 and 60KB-VS62C will both need monitoring for the closed vent system. For now, I have selected our paired options of PM-V-058 and PM-V-059, with deviation limits commonly used by other applicants. Please submit an OP-MON to confirm this is acceptable or propose other monitoring.

    The closed vent systems for these storage tanks are part of the fugitive components in units VS-93, which are already required to be monitored under NSPS Subpart VV. The NSPS Subpart VV applicable requirements are included for units VS-93 in the Working Draft Permit. These fugitive component units are also monitored under the TCEQ 28LAER LDAR program per the requirements of the NSR Permit. Noltex believes these LDAR programs satisfy any applicable monitoring requirements and additional periodic monitoring is not required.

    TCEQ Response: Periodic monitoring must be documented for each applicable emission limit. This monitoring will either be in the rule text itself (which NSPS Kb lacks for the closed vent system) or as additional monitoring (in a PM table). Adding a PM table does not necessarily mean that the applicant has to conduct more monitoring in practice than what they may already conduct for other regulations. The same monitoring may be used for multiple rules/emission limits, but it must be listed against each limit in the permit. In other words, whatever is being done needs to be connected to NSPS Kb explicitly, so it is clear that the monitoring requirement is satisfied. In 60.482-10, NSPS VV requires an annual visual inspection of the closed vent system for leaks and also specifies that an instrument reading of 500 ppmv above background constitutes a leak, so I think the options I chose correlate to that. However, if you feel those options are not sufficiently consistent with the monitoring that is already being conducted, you can submit a case-by-case proposal with other wording.

    b. The rule has adequate monitoring language for flares, but not for other control device types. Index 60KB-VS62C will need monitoring for the control device. For now, I have selected option PM-V-007 with a placeholder deviation limit based on the temperature required by the NSR permit prior to the initial stack test. I see that the NSR permit allows different values based on conditions during later tests, so if you need a different minimum temperature, please let me know the new value. Alternatively, you may propose other monitoring.

    OP-MON Forms for Index 60KB-TOX for VS-33T and VS-178T are attached to the email response. The OP-MON forms are case-by-case proposals that match the NSR Permit TOX temperature monitoring requirements, except the monitoring frequency is Once per Week rather than continuous. This way the site is basically already meeting the requirements.

    TCEQ Response: The requested periodic monitoring has been added to the permit.

18. In the existing permit, VS-41T had requirements for both Chapter 115, Storage of VOCs and Chapter 115, Vent Gas, which I think was an error. It also had a permit shield for NSPS Kb based on being a process vessel, and our database had a Chapter 115, Storage of VOCs shield for the same reason that had not been granted. Therefore, I've removed the old UA data and requirements for Chapter 115, Storage of VOCs. I granted that permit shield. Please let me know if any further corrections are needed.

Those changes are correct. The positive and negative applicability for VS-41T should be the same as for unit VS-41T-1.

TCEQ Response: Thanks – nothing further needed.

19. VS-62C had a shield for Chapter 117 based on the site not being a major source of NOx. Since flares are exempted in any case (117.303(a)(4)), I changed the shield reason to that. That way in the future even if the site becomes major for NOx, the permit shield will still be valid. Let me know if this is acceptable.
    Yes I agree, this is a good idea. Could you also include the same permit shield for FL-2?
    TCEQ Response: Permit shield has been added for FL-2.

20. New units GC3 and L3-72-3 were added to the permit. For GC3, the SOP Index No. was listed as R5127-GC2 on the form. I figured you meant R5127-GC3 so changed it to that (consistent with how GC1 and GC2 were labeled).
21. On the OP-REQ1 that was submitted to correct answers for Item #3 above, I noticed that you had also updated a MACT FFFF answer, question VIII.AA.18. I have removed the term for process wastewater containers from the Special Terms and Conditions.
22. Removed units HE-201, HE-840, TW-250, TW-302, TW-350, TW-701, TW-750, TW-820, TW-821, and VS-220C from GRP-NNN as well as the permit, since units vent through other sources where the requirements are applied.
23. Unit L3-63T-3 removed (also mentioned in Item #9.a).
24. Unit V-415 corrected to V-451 (also mentioned in Item #14.e). For Chapter 115, Vent Gas, operating scenarios R5121-FL2 and R5121-VS62C were removed, and R5121-TOX was changed to R5121-RTO.
25. Removed units VE-502 and VE-503.
26. Changes for unit VS-75T: Chapter 115, Storage of VOC requirements were removed. For Chapter 115, Vent Gas, operating scenarios R5121-FL2 and R5121-VS62C were removed, and R5121-TOX was changed to R5121-RTO.
27. Changes for unit VS-75T-1: For Chapter 115, Vent Gas, operating scenarios R5121-FL2 and R5121-VS62C were removed, and R5121-TOX was changed to R5121-RTO.
28. Changed unit name for VS-23T-1 to VAC STORAGE TANK (also mentioned in Item# 4.a).
29. Removed duplicate listing of VS-75T from NSR Authorizations by Emission Unit table.

FEDERAL OPERATING PERMIT

A FEDERAL OPERATING PERMIT IS HEREBY ISSUED TO
Noltex, L.L.C

AUTHORIZING THE OPERATION OF
EVOH Copolymer Facility
Plastics Material and Resin Manufacturing

LOCATED AT
Harris County, Texas
Latitude 29° 42′ 4″ Longitude 95° 2′ 32″
Regulated Entity Number: RN101049518

This permit is issued in accordance with and subject to the Texas Clean Air Act (TCAA), Chapter 382 of the Texas Health and Safety Code and Title 30 Texas Administrative Code Chapter 122 (30 TAC Chapter 122), Federal Operating Permits. Under 30 TAC Chapter 122, this permit constitutes the permit holder's authority to operate the site and emission units listed in this permit. Operations of the site and emission units listed in this permit are subject to all additional rules or amended rules and orders of the Commission pursuant to the TCAA.

This permit does not relieve the permit holder from the responsibility of obtaining New Source Review authorization for new, modified, or existing facilities in accordance with 30 TAC Chapter 116, Control of Air Pollution by Permits for New Construction or Modification.

The site and emission units authorized by this permit shall be operated in accordance with 30 TAC Chapter 122, the general terms and conditions, special terms and conditions, and attachments contained herein.

This permit shall expire five years from the date of issuance. The renewal requirements specified in 30 TAC § 122.241 must be satisfied in order to renew the authorization to operate the site and emission units.

Permit No: O1301 Issuance Date: _____

_____
For the Commission

Table of Contents

General Terms and Conditions

The permit holder shall comply with all terms and conditions contained in 30 TAC § 122.143 (General Terms and Conditions), 30 TAC § 122.144 (Recordkeeping Terms and Conditions), 30 TAC § 122.145 (Reporting Terms and Conditions), and 30 TAC § 122.146 (Compliance Certification Terms and Conditions).

In accordance with 30 TAC § 122.144(1), records of required monitoring data and support information required by this permit, or any applicable requirement codified in this permit, are required to be maintained for a period of five years from the date of the monitoring report, sample, or application unless a longer data retention period is specified in an applicable requirement. The five year record retention period supersedes any less stringent retention requirement that may be specified in a condition of a permit identified in the New Source Review Authorization attachment.

If the permit holder chooses to demonstrate that this permit is no longer required, a written request to void this permit shall be submitted to the Texas Commission on Environmental Quality (TCEQ) by the Responsible Official in accordance with 30 TAC § 122.161(e). The permit holder shall comply with the permit's requirements, including compliance certification and deviation reporting, until notified by the TCEQ that this permit is voided.

The permit holder shall comply with 30 TAC Chapter 116 by obtaining a New Source Review authorization prior to new construction or modification of emission units located in the area covered by this permit.

All reports required by this permit must include in the submittal a cover letter which identifies the following information: company name, TCEQ regulated entity number, air account number (if assigned), site name, area name (if applicable), and Air Permits Division permit number(s).

Special Terms and Conditions:

Emission Limitations and Standards, Monitoring and Testing, and Recordkeeping and Reporting

1. Permit holder shall comply with the following requirements:

    A. Emission units (including groups and processes) in the Applicable Requirements Summary attachment shall meet the limitations, standards, equipment specifications, monitoring, recordkeeping, reporting, testing, and other requirements listed in the Applicable Requirements Summary attachment to assure compliance with the permit.

    B. The textual description in the column titled "Textual Description" in the Applicable Requirements Summary attachment is not enforceable and is not deemed as a substitute for the actual regulatory language. The Textual Description is provided for information purposes only.

    C. A citation listed on the Applicable Requirements Summary attachment, which has a notation [G] listed before it, shall include the referenced section and subsection for all commission rules, or paragraphs for all federal and state regulations and all subordinate paragraphs, subparagraphs and clauses, subclauses, and items contained within the referenced citation as applicable requirements.

    D. When a grouped citation, notated with a [G] in the Applicable Requirements Summary, contains multiple compliance options, the permit holder must keep records of when each compliance option was used.

E. Emission units subject to 40 CFR Part 63, Subpart FFFF as identified in the attached Applicable Requirements Summary table are subject to 30 TAC Chapter 113, Subchapter C, § 113.890 which incorporates the 40 CFR Part 63 Subpart by reference.

F. Emission units subject to 40 CFR Part 63, Subpart ZZZZ as identified in the attached Applicable Requirements Summary table are subject to 30 TAC Chapter 113, Subchapter C, §113.1090 which incorporates the 40 CFR Part 63 Subpart by reference.

2. The permit holder shall comply with the following sections of 30 TAC Chapter 101 (General Air Quality Rules):

A. Title 30 TAC § 101.1 (relating to Definitions), insofar as the terms defined in this section are used to define the terms used in other applicable requirements

B. Title 30 TAC § 101.3 (relating to Circumvention)

C. Title 30 TAC § 101.8 (relating to Sampling), if such action has been requested by the TCEQ

D. Title 30 TAC § 101.9 (relating to Sampling Ports), if such action has been requested by the TCEQ

E. Title 30 TAC § 101.10 (relating to Emissions Inventory Requirements)

F. Title 30 TAC § 101.201 (relating to Emission Event Reporting and Recordkeeping Requirements)

G. Title 30 TAC § 101.211 (relating to Scheduled Maintenance, Start-up, and Shutdown Reporting and Recordkeeping Requirements)

H. Title 30 TAC § 101.221 (relating to Operational Requirements)

I. Title 30 TAC § 101.222 (relating to Demonstrations)

J. Title 30 TAC § 101.223 (relating to Actions to Reduce Excessive Emissions)

3. Permit holder shall comply with the following requirements of 30 TAC Chapter 111:

A. Visible emissions from stationary vents with a flow rate of less than 100,000 actual cubic feet per minute and constructed after January 31, 1972 that are not listed in the Applicable Requirements Summary attachment for 30 TAC Chapter 111, Subchapter A, Division 1, shall not exceed 20% opacity averaged over a six-minute period. The permit holder shall comply with the following requirements for stationary vents at the site subject to this standard:

(i) Title 30 TAC § 111.111(a)(1)(B) (relating to Requirements for Specified Sources)

(ii) Title 30 TAC § 111.111(a)(1)(E)

(iii) Title 30 TAC § 111.111(a)(1)(F)(i), (ii), (iii), or (iv)

(iv) For emission units with vent emissions subject to 30 TAC § 111.111(a)(1)(B), complying with 30 TAC § 111.111(a)(1)(F)(ii), (iii), or (iv), and capable of producing visible emissions from, but not limited to, particulate matter, acid gases and NO_x, the permit holder shall also comply with the following periodic

monitoring requirements for the purpose of annual compliance certification under 30 TAC § 122.146. These periodic monitoring requirements do not apply to vents that are not capable of producing visible emissions such as vents that emit only colorless VOCs; vents from non-fuming liquids; vents that provide passive ventilation, such as plumbing vents; or vent emissions from any other source that does not obstruct the transmission of light. Vents, as specified in the "Applicable Requirements Summary" attachment, that are subject to the emission limitation of 30 TAC § 111.111(a)(1)(B) are not subject to the following periodic monitoring requirements:

(1) An observation of stationary vents from emission units in operation shall be conducted at least once during each calendar quarter unless the emission unit is not operating for the entire quarter.

(2) For stationary vents from a combustion source, if an alternative to the normally fired fuel is fired for a period greater than or equal to 24 consecutive hours, the permit holder shall conduct an observation of the stationary vent for each such period to determine if visible emissions are present. If such period is greater than 3 months, observations shall be conducted once during each quarter. Supplementing the normally fired fuel with natural gas or fuel gas to increase the net heating value to the minimum required value does not constitute creation of an alternative fuel.

(3) Records of all observations shall be maintained.

(4) Visible emissions observations of emission units operated during daylight hours shall be conducted no earlier than one hour after sunrise and no later than one hour before sunset. Visible emissions observations of emission units operated only at night must be made with additional lighting and the temporary installation of contrasting backgrounds. Visible emissions observations shall be made during times when the activities described in 30 TAC § 111.111(a)(1)(E) are not taking place. Visible emissions shall be determined with each stationary vent in clear view of the observer. The observer shall be at least 15 feet, but not more than 0.25 mile, away from each stationary vent during the observation. For outdoor locations, the observer shall select a position where the sun is not directly in the observer's eyes. When condensed water vapor is present within the plume, as it emerges from the emissions outlet, observations must be made beyond the point in the plume at which condensed water vapor is no longer visible. When water vapor within the plume condenses and becomes visible at a distance from the emissions outlet, the observation shall be evaluated at the outlet prior to condensation of water vapor. A certified opacity reader is not required for visible emissions observations.

(5) Compliance Certification:

(a) If visible emissions are not present during the observation, the RO may certify that the source is in compliance with the applicable opacity requirement in 30 TAC § 111.111(a)(1) and (a)(1)(B).

(b) However, if visible emissions are present during the observation, the permit holder shall either list this occurrence as a deviation on the next deviation report as required under

30 TAC § 122.145(2) or conduct the appropriate opacity test specified in 30 TAC § 111.111(a)(1)(F) as soon as practicable, but no later than 24 hours after observing visible emissions to determine if the source is in compliance with the opacity requirements. If an opacity test is performed and the source is determined to be in compliance, the RO may certify that the source is in compliance with the applicable opacity requirement. However, if an opacity test is performed and the source is determined to be out of compliance, the permit holder shall list this occurrence as a deviation on the next deviation report as required under 30 TAC § 122.145(2). The opacity test must be performed by a certified opacity reader.

(c) Some vents may be subject to multiple visible emission or monitoring requirements. All credible data must be considered when certifying compliance with this requirement even if the observation or monitoring was performed to demonstrate compliance with a different requirement.

B. For visible emissions from a building, enclosed facility, or other structure; the permit holder shall comply with the following requirements:

(i) Title 30 TAC § 111.111(a)(7)(A) (relating to Requirements for Specified Sources)

(ii) Title 30 TAC § 111.111(a)(7)(B)(i) or (ii)

(iii) For a building containing an air emission source, enclosed facility, or other structure containing or associated with an air emission source subject to 30 TAC § 111.111(a)(7)(A), complying with 30 TAC § 111.111(a)(7)(B)(i) or (ii), and capable of producing visible emissions from, but not limited to, particulate matter, acid gases and NO_x, the permit holder shall also comply with the following periodic monitoring requirements for the purpose of annual compliance certification under 30 TAC § 122.146:

(1) An observation of visible emissions from a building containing an air emission source, enclosed facility, or other structure containing or associated with an air emission source which is required to comply with 30 TAC § 111.111(a)(7)(A) shall be conducted at least once during each calendar quarter unless the air emission source or enclosed facility is not operating for the entire quarter.

(2) Records of all observations shall be maintained.

(3) Visible emissions observations of air emission sources or enclosed facilities operated during daylight hours shall be conducted no earlier than one hour after sunrise and no later than one hour before sunset. Visible emissions observations of air emission sources or enclosed facilities operated only at night must be made with additional lighting and the temporary installation of contrasting backgrounds. Visible emissions shall be determined with each emissions outlet in clear view of the observer. The observer shall be at least 15 feet, but not more than 0.25 mile, away from each emissions outlet during the observation. For outdoor locations, the observer shall select a position where the sun is not directly in the observer's eyes. When condensed water vapor is present within the plume, as it emerges from the emissions outlet, observations must be made beyond the point in the plume at which

condensed water vapor is no longer visible. When water vapor within the plume condenses and becomes visible at a distance from the emissions outlet, the observation shall be evaluated at the outlet prior to condensation of water vapor. A certified opacity reader is not required for visible emissions observations.

(4) Compliance Certification:

(a) If visible emissions are not present during the observation, the RO may certify that the source is in compliance with the applicable opacity requirement in 30 TAC § 111.111(a)(7) and (a)(7)(A).

(b) However, if visible emissions are present during the observation, the permit holder shall either list this occurrence as a deviation on the next deviation report as required under 30 TAC § 122.145(2) or conduct the appropriate opacity test specified in 30 TAC § 111.111(a)(7)(B) as soon as practicable, but no later than 24 hours after observing visible emissions to determine if the source is in compliance with the opacity requirements. If an opacity test is performed and the source is determined to be in compliance, the RO may certify that the source is in compliance with the applicable opacity requirement. However, if an opacity test is performed and the source is determined to be out of compliance, the permit holder shall list this occurrence as a deviation on the next deviation report as required under 30 TAC § 122.145(2). The opacity test must be performed by a certified opacity reader.

C. Certification of opacity readers determining opacities under Method 9 (as outlined in 40 CFR Part 60, Appendix A) to comply with opacity monitoring requirements shall be accomplished by completing the Visible Emissions Evaluators Course, or approved agency equivalent, no more than 180 days before the opacity reading.

D. For emission units with contributions from uncombined water, the permit holder shall comply with the requirements of 30 TAC § 111.111(b).

E. Emission limits on nonagricultural processes, except for the steam generators specified in 30 TAC § 111.153, shall comply with the following requirements:

(i) Emissions of PM from any source may not exceed the allowable rates as required in 30 TAC § 111.151(a) (relating to Allowable Emissions Limits)

(ii) Sources with an effective stack height (h_e) less than the standard effective stack height (H_e), must reduce the allowable emission level by multiplying it by $[h_e/H_e]^2$ as required in 30 TAC § 111.151(b)

(iii) Effective stack height shall be calculated by the equation specified in 30 TAC § 111.151(c)

4. For storage vessels maintaining working pressure as specified in 30 TAC Chapter 115, Subchapter B, Division 1: Storage of Volatile Organic Compounds, the permit holder shall comply with the requirements of 30 TAC § 115.112(e)(1).

5. For industrial wastewater specified in 30 TAC Chapter 115, Subchapter B, the permit holder shall comply with the following requirements:

   A. Title 30 TAC § 115.145 (relating to Approved Test Methods)

   B. Title 30 TAC § 115.146 (relating to Recordkeeping Requirements)

   C. Title 30 TAC § 115.147(1) (relating to Exemptions)

   D. Title 30 TAC § 115.148 (relating to Determination of Wastewater Characteristics)

6. The permit holder shall comply with the following requirements of 30 TAC Chapter 115, Subchapter F, Division 3, Degassing of Storage Tanks, Transport Vessels and Marine Vessels:

   A. For degassing of stationary VOC storage tanks, the permit holder shall comply with the following requirements:

      (i) Title 30 TAC § 115.541(a) - (c) (relating to Emission Specifications)

      (ii) Title 30 TAC § 115.541(f) (relating to Emission Specifications), for floating roof storage tanks

      (iii) Title 30 TAC § 115.542(a) and (a)(1), (a)(2), (a)(3) or (a)(4) (relating to Control Requirements). Where the requirements of 30 TAC Chapter 115, Subchapter F contain multiple compliance options, the permit holder shall keep records of when each compliance option was used.

      (iv) Title 30 TAC § 115.542(b) - (d), (relating to Control Requirements)

      (v) Title 30 TAC § 115.543 (relating to Alternate Control Requirements)

      (vi) Title 30 TAC § 115.544(a)(1) and (a)(2) (relating to Inspection, Monitoring, and Testing Requirements), for inspections

      (vii) Title 30 TAC § 115.544(b) (relating to Inspection, Monitoring, and Testing Requirements), for monitoring

      (viii) Title 30 TAC § 115.544(b)(1) and (b)(2) (relating to Inspection, Monitoring, and Testing Requirements), for monitoring of control devices

      (ix) Title 30 TAC § 115.544(b)(2)(A) - (J) (relating to Inspection, Monitoring, and Testing Requirements), for monitoring (as appropriate to the control device)

      (x) Title 30 TAC § 115.544(b)(3), (b)(4) and (b)(6) (relating to Inspection, Monitoring, and Testing Requirements), for VOC concentration or lower explosive limit threshold monitoring

      (xi) Title 30 TAC § 115.544(c), and (c)(1) - (c)(3) (relating to Inspection, Monitoring, and Testing Requirements), for testing of control devices used to comply with 30 TAC § 115.542(a)(1)

      (xii) Title 30 TAC § 115.545(1) - (7), (9) - (11) and (13) (relating to Approved Test Methods)

(xiii) Title 30 TAC § 115.546(a), (a)(1) and (a)(3) (relating to Recordkeeping and Notification Requirements), for recordkeeping

(xiv) Title 30 TAC § 115.546(a)(2) and (a)(2)(A) - (J) (relating to Recordkeeping and Notification Requirements), for recordkeeping (as appropriate to the control device)

(xv) Title 30 TAC § 115.546(a)(4) (relating to Recordkeeping and Notification Requirements), for recordkeeping of testing of control devices used to comply with 30 TAC § 115.542(a)(1)

(xvi) Title 30 TAC § 115.546(b) (relating to Recordkeeping and Notification Requirements), for notification

(xvii) Title 30 TAC § 115.547(4) (relating to Exemptions)

7. The permit holder shall comply with the requirements of 30 TAC § 115.722(b) (relating to Site-wide Cap and Control Requirements) and the requirements of 30 TAC § 115.726(g) (relating to Recordkeeping and Reporting Requirements).

8. The permit holder shall comply with the requirements of 30 TAC § 115.761(b) (relating to Site-wide Cap) and the requirements of 30 TAC § 115.766(g) (relating to Recordkeeping and Reporting Requirements).

9. The permit holder shall comply with the following requirements of 30 TAC Chapter 117:

A. For boilers, process heaters, stationary reciprocating engines, and turbines (including duct burners) exempt from Subchapter D, Division 1 at minor sources of NO_x under 30 TAC § 117.2003(a), the permit holder shall comply with 30 TAC §§ 117.2030(c), 117.2035(g), 117.2045(b) and 117.2045(c).

10. The permit holder shall comply with the following requirements for units subject to any subpart of 40 CFR Part 60, unless otherwise stated in the applicable subpart:

A. Title 40 CFR § 60.7 (relating to Notification and Recordkeeping)

B. Title 40 CFR § 60.8 (relating to Performance Tests)

C. Title 40 CFR § 60.11 (relating to Compliance with Standards and Maintenance Requirements)

D. Title 40 CFR § 60.12 (relating to Circumvention)

E. Title 40 CFR § 60.13 (relating to Monitoring Requirements)

F. Title 40 CFR § 60.14 (relating to Modification)

G. Title 40 CFR § 60.15 (relating to Reconstruction)

H. Title 40 CFR § 60.19 (relating to General Notification and Reporting Requirements)

11. The permit holder shall comply with the requirements of 30 TAC Chapter 113, Subchapter C, § 113.100 for units subject to any subpart of 40 CFR Part 63, unless otherwise stated in the applicable subpart.

12. For miscellaneous chemical process facilities subject to maintenance wastewater requirements as specified in 40 CFR § 63.2485, Table 7, the permit holder shall comply with the requirements of 40 CFR § 63.105 (relating to Maintenance Wastewater Requirements) (Title 30 TAC Chapter 113, Subchapter C, § 113.890 incorporated by reference).

13. For miscellaneous chemical process facilities with Group 2 wastewater streams subject to wastewater operations requirements in 40 CFR Part 63, Subpart FFFF, the permit holder shall comply with the requirements of 40 CFR § 63.132(a), (a)(1), (a)(1)(i), and (a)(3) as specified in § 63.2485(a) (Title 30 TAC Chapter 113, Subchapter C, § 113.890 incorporated by reference).

14. The permit holder shall comply with certified registrations submitted to the TCEQ for purposes of establishing federally enforceable emission limits. A copy of the certified registration shall be maintained with the permit. Records sufficient to demonstrate compliance with the established limits shall be maintained. The certified registration and records demonstrating compliance shall be provided, on request, to representatives of the appropriate TCEQ regional office and any local air pollution control agency having jurisdiction over the site. The permit holder shall submit updated certified registrations when changes at the site require establishment of new emission limits. If changes result in emissions that do not remain below major source thresholds, the permit holder shall submit a revision application to codify the appropriate requirements in the permit.

Additional Monitoring Requirements

15. The permit holder shall comply with the periodic monitoring requirements as specified in the attached "Periodic Monitoring Summary" upon issuance of the permit. Except for, as applicable, monitoring malfunctions, associated repairs, and required quality assurance or control activities (including, as applicable, calibration checks and required zero and span adjustments), the permit holder shall conduct all monitoring in continuous operation (or shall collect data at all required intervals) at all times that the pollutant-specific emissions unit is operating. The permit holder may elect to collect monitoring data on a more frequent basis and average the data, consistent with the averaging time or minimum frequency specified in the "Periodic Monitoring Summary," for purposes of determining whether a deviation has occurred. However, the additional data points must be collected on a regular basis. In no event shall data be collected and used in particular instances to avoid reporting deviations. Deviations shall be reported according to 30 TAC § 122.145 (Reporting Terms and Conditions).

New Source Review Authorization Requirements

16. Permit holder shall comply with the requirements of New Source Review authorizations issued or claimed by the permit holder for the permitted area, including permits, permits by rule (including the permits by rule identified in the PBR Supplemental Tables in the application), standard permits, flexible permits, special permits, permits for existing facilities including Voluntary Emissions Reduction Permits and Electric Generating Facility Permits issued under 30 TAC Chapter 116, Subchapter I, or special exemptions referenced in the New Source Review Authorization References attachment. These requirements:

    A. Are incorporated by reference into this permit as applicable requirements

    B. Shall be located with this operating permit

    C. Are not eligible for a permit shield

17. The permit holder shall comply with the general requirements of 30 TAC Chapter 106, Subchapter A or the general requirements, if any, in effect at the time of the claim of any PBR.

18. The permit holder shall maintain records to demonstrate compliance with any emission limitation or standard that is specified in a permit by rule (PBR) or Standard Permit listed in the New Source Review Authorizations attachment. The records shall yield reliable data from the relevant time period that are representative of the emission unit's compliance with the PBR or Standard Permit. These records may include, but are not limited to, production capacity and throughput, hours of operation, safety data sheets (SDS), chemical composition of raw materials, speciation of air contaminant data, engineering calculations, maintenance records, fugitive data, performance tests, capture/control device efficiencies, direct pollutant monitoring (CEMS, COMS, or PEMS), or control device parametric monitoring. These records shall be made readily accessible and available as required by 30 TAC § 122.144. Any monitoring or recordkeeping data indicating noncompliance with the PBR or Standard Permit shall be considered and reported as a deviation according to 30 TAC § 122.145 (Reporting Terms and Conditions).

Compliance Requirements

19. The permit holder shall certify compliance in accordance with 30 TAC § 122.146. The permit holder shall comply with 30 TAC § 122.146 using at a minimum, but not limited to, the continuous or intermittent compliance method data from monitoring, recordkeeping, reporting, or testing required by the permit and any other credible evidence or information. The certification period may not exceed 12 months and the certification must be submitted within 30 days after the end of the period being certified.

20. Use of Emission Credits to comply with applicable requirements:

    A. Unless otherwise prohibited, the permit holder may use emission credits to comply with the following applicable requirements listed elsewhere in this permit:

        (i) Title 30 TAC Chapter 115

        (ii) Title 30 TAC Chapter 117

        (iii) Offsets for Title 30 TAC Chapter 116

    B. The permit holder shall comply with the following requirements in order to use the emission credits to comply with the applicable requirements:

        (i) The permit holder must notify the TCEQ according to 30 TAC § 101.306(c)-(d)

        (ii) The emission credits to be used must meet all the geographic, timeliness, applicable pollutant type, and availability requirements listed in 30 TAC Chapter 101, Subchapter H, Division 1

        (iii) The executive director has approved the use of the credit according to 30 TAC § 101.306(c)-(d)

        (iv) The permit holder keeps records of the use of credits towards compliance with the applicable requirements in accordance with 30 TAC § 101.302(g) and 30 TAC Chapter 122

        (v) Title 30 TAC § 101.305 (relating to Emission Reductions Achieved Outside the United States)

21. Use of Discrete Emission Credits to comply with the applicable requirements:

A. Unless otherwise prohibited, the permit holder may use discrete emission credits to comply with the following applicable requirements listed elsewhere in this permit:

(i) Title 30 TAC Chapter 115

(ii) Title 30 TAC Chapter 117

(iii) If applicable, offsets for Title 30 TAC Chapter 116

(iv) Temporarily exceed state NSR permit allowables

B. The permit holder shall comply with the following requirements in order to use the credit to comply with the applicable requirements:

(i) The permit holder must notify the TCEQ according to 30 TAC § 101.376(d)

(ii) The discrete emission credits to be used must meet all the geographic, timeliness, applicable pollutant type, and availability requirements listed in 30 TAC Chapter 101, Subchapter H, Division 4

(iii) The executive director has approved the use of the discrete emission credits according to 30 TAC § 101.376(d)(1)(A)

(iv) The permit holder keeps records of the use of credits towards compliance with the applicable requirements in accordance with 30 TAC § 101.372(h) and 30 TAC Chapter 122

(v) Title 30 TAC § 101.375 (relating to Emission Reductions Achieved Outside the United States)

Risk Management Plan

22. For processes subject to 40 CFR Part 68 and specified in 40 CFR § 68.10, the permit holder shall comply with the requirements of the Accidental Release Prevention Provisions in 40 CFR Part 68. The permit holder shall submit to the appropriate agency either a compliance schedule for meeting the requirements of 40 CFR Part 68 by the date provided in 40 CFR § 68.10(a), or as part of the compliance certification submitted under this permit, a certification statement that the source is in compliance with all requirements of 40 CFR Part 68, including the registration and submission of a risk management plan.

Protection of Stratospheric Ozone

23. Permit holders at a site subject to Title VI of the FCAA Amendments shall meet the following requirements for protection of stratospheric ozone:

A. Any on site servicing, maintenance, and repair on refrigeration and nonmotor vehicle air-conditioning appliances using ozone-depleting refrigerants or non-exempt substitutes shall be conducted in accordance with 40 CFR Part 82, Subpart F. Permit holders shall ensure that repairs on or refrigerant removal from refrigeration and nonmotor vehicle air-conditioning appliances using ozone-depleting refrigerants are performed only by properly certified technicians using certified equipment. Records shall be maintained as required by 40 CFR Part 82, Subpart F.

Permit Location

24. The permit holder shall maintain a copy of this permit and records related to requirements listed in this permit on site.

Permit Shield (30 TAC § 122.148)

25. A permit shield is granted for the emission units, groups, or processes specified in the attached "Permit Shield." Compliance with the conditions of the permit shall be deemed compliance with the specified potentially applicable requirements or specified potentially applicable state-only requirements listed in the attachment "Permit Shield." Permit shield provisions shall not be modified by the executive director until notification is provided to the permit holder. No later than 90 days after notification of a change in a determination made by the executive director, the permit holder shall apply for the appropriate permit revision to reflect the new determination. Provisional terms are not eligible for this permit shield. Any term or condition, under a permit shield, shall not be protected by the permit shield if it is replaced by a provisional term or condition or the basis of the term and condition changes.

Applicable Requirements Summary

Note: A “none” entry may be noted for some emission sources in this permit’s “Applicable Requirements Summary” under the heading of “Monitoring and Testing Requirements” and/or “Recordkeeping Requirements” and/or “Reporting Requirements.” Such a notation indicates that there are no requirements for the indicated emission source as identified under the respective column heading(s) for the stated portion of the regulation when the emission source is operating under the conditions of the specified SOP Index Number. However, other relevant requirements pursuant to 30 TAC Chapter 122 including Recordkeeping Terms and Conditions (30 TAC § 122.144), Reporting Terms and Conditions (30 TAC § 122.145), and Compliance Certification Terms and Conditions (30 TAC § 122.146) continue to apply.

Unit Summary

Unit/Group/ Process ID No.	Unit Type	Group/Inclusive Units	SOP Index No.	Regulation	Requirement Driver
					Limitation = No equivalent emission limitation is used for valves in gas/vapor or light liquid service., Equivalent Emission Limitation = No equivalent emission limitation is used for valves in heavy liquid service., Equivalent Emission Limitation = No equivalent emission limitation is used for flanges and other connectors., Equivalent Emission Limitation = No equivalent emission limitation is used for enclosed combustion devices., Equivalent Emission Limitation = No equivalent emission limitation is used for flares., Vacuum Service = The fugitive unit does not contain equipment in vacuum serv
VS-93	FUGITIVE EMISSION UNITS	N/A	60VV-300-	40 CFR Part 60, Subpart VV	Vacuum Service = The fugitive unit does not contain equipment in vacuum service., VOC Service = Fugitive unit contains equipment designed to operate in VOC service less than 300 hours per year.
VS-93	FUGITIVE EMISSION UNITS	N/A	60VV-VACU	40 CFR Part 60, Subpart VV	Vacuum Service = The fugitive unit contains equipment in vacuum service.
VS-93	FUGITIVE EMISSION UNITS	N/A	63FFFF	40 CFR Part 63, Subpart FFFF	No changing attributes.

Applicable Requirements Summary

Unit Group Process ID No.	Unit Group Process Type	SOP Index No.	Pollutant	State Rule or Federal Regulation Name	Emission Limitation, Standard or Equipment Specification Citation	Textual Description (See Special Term and Condition 1.B.)	Monitoring And Testing Requirements	Recordkeeping Requirements (30 TAC § 122.144)	Reporting Requirements (30 TAC § 122.145)
COOLTOW	EU	R5761-COOLTOW	Highly Reactive VOC	30 TAC Chapter 115, HRVOC Cooling Towers	§ 115.761(c)(1) § 115.761(c)(3) § 115.766(i)	HRVOC emissions at each site located in Harris County that is subject to this division or Division 1 of this subchapter must not exceed 1,200 pounds of HRVOCs per one-hour block period from any flare, vent, pressure relief valve, cooling tower, or any combination.	§ 115.764(c) § 115.764(f)	§ 115.766(a)(1) § 115.766(a)(2) § 115.766(a)(3) § 115.766(a)(5) § 115.766(a)(6) § 115.766(c) [G]§ 115.766(g) [G]§ 115.766(h) § 115.766(i)(1)	§ 115.766(i)(2)

Additional Monitoring Requirements

Periodic Monitoring Summary

Unit/Group/Process Information	
ID No.: PT-CLEAN	
Control Device ID No.: N/A	Control Device Type: N/A
Applicable Regulatory Requirement	
Name: 30 TAC Chapter 115, Degreasing Processes	SOP Index No.: R5412-1
Pollutant: VOC	Main Standard: § 115.412(1)
Monitoring Information	
Indicator: Visual Inspection	
Minimum Frequency: Monthly	
Averaging Period: N/A	
Deviation Limit: Inspection not conducted. No cover, or cover open when unit not in use. Device not properly labeled. Waste solvent not stored in closed container, or parts not drained for at least 15 seconds, or porous or absorbent materials degreased in unit.	
Periodic Monitoring Text: Inspect equipment and record data monthly to ensure compliance with § 115.412(1)(A), (C), and (F). Any monitoring data which indicates that the cold cleaner is not in compliance with the applicable requirements of § 115.412(1)(A), (C), or (F) shall be considered and reported as a deviation.	

Periodic Monitoring Summary

Unit/Group/Process Information	
ID No.: VS-178T	
Control Device ID No.: FL-2	Control Device Type: Flare
Applicable Regulatory Requirement	
Name: 40 CFR Part 60, Subpart Kb	SOP Index No.: 60KB-FLR2
Pollutant: VOC	Main Standard: [G]§ 60.112b(a)(3)
Monitoring Information	
Indicator: VOC Concentration	
Minimum Frequency: Once per year	
Averaging Period: N/A	
Deviation Limit: VOC concentration > 500 ppmv.	
Periodic Monitoring Text: Measure and record fugitive emissions from the vapor collection system in accordance with part 60, appendix A, method 21.	

Periodic Monitoring Summary

Unit/Group/Process Information	
ID No.: VS-178T	
Control Device ID No.: FL-2	Control Device Type: Flare
Applicable Regulatory Requirement	
Name: 40 CFR Part 60, Subpart Kb	SOP Index No.: 60KB-FLR2
Pollutant: VOC	Main Standard: [G]§ 60.112b(a)(3)
Monitoring Information	
Indicator: Visual Inspection	
Minimum Frequency: Once per year	
Averaging Period: N/A	
Deviation Limit: Inspections not conducted, or defects discovered and not repaired.	
Periodic Monitoring Text: Visually inspect all components of the vapor collection system for defects, such as cracks, holes, gaps, loose connections, or broken or missing covers or other closure devices, that could result in air emissions.	

Periodic Monitoring Summary

Unit/Group/Process Information	
ID No.: VS-178T	
Control Device ID No.: TOX	Control Device Type: Thermal incinerator (direct flame incinerator/regenerative thermal oxidizer)
Applicable Regulatory Requirement	
Name: 40 CFR Part 60, Subpart Kb	SOP Index No.: 60KB-TOX
Pollutant: VOC	Main Standard: [G]§ 60.112b(a)(3)
Monitoring Information	
Indicator: Firebox Temperature	
Minimum Frequency: Once per week	
Averaging Period: N/A	
Deviation Limit: Minimum firebox temperature of 1,800 degrees F.	
Periodic Monitoring Text: Monitor and record the firebox temperature in the thermal oxidizer. The temperature measurement device shall be installed, calibrated and maintained according to accepted practice and the manufacturer's specifications. Any monitoring data below the minimum limit shall be considered and reported as a deviation.	

Periodic Monitoring Summary

Unit/Group/Process Information	
ID No.: VS-178T	
Control Device ID No.: TOX	Control Device Type: Thermal incinerator (direct flame incinerator/regenerative thermal oxidizer)
Applicable Regulatory Requirement

Control Device ID No.: FL-2	Control Device Type: Flare
Applicable Regulatory Requirement	
Name: 40 CFR Part 60, Subpart Kb	SOP Index No.: 60KB-FLR2
Pollutant: VOC	Main Standard: [G]§ 60.112b(a)(3)
Monitoring Information	
Indicator: VOC Concentration	
Minimum Frequency: Once per year	
Averaging Period: N/A	
Deviation Limit: VOC concentration > 500 ppmv.	
Periodic Monitoring Text: Measure and record fugitive emissions from the vapor collection system in accordance with part 60, appendix A, method 21.	

Periodic Monitoring Summary

Unit/Group/Process Information	
ID No.: VS-33T	
Control Device ID No.: FL-2	Control Device Type: Flare
Applicable Regulatory Requirement	
Name: 40 CFR Part 60, Subpart Kb	SOP Index No.: 60KB-FLR2
Pollutant: VOC	Main Standard: [G]§ 60.112b(a)(3)
Monitoring Information	
Indicator: Visual Inspection	
Minimum Frequency: Once per year	
Averaging Period: N/A	
Deviation Limit: Inspections not conducted, or defects discovered and not repaired.	
Periodic Monitoring Text: Visually inspect all components of the vapor collection system for defects, such as cracks, holes, gaps, loose connections, or broken or missing covers or other closure devices, that could result in air emissions.	

Periodic Monitoring Summary

Unit/Group/Process Information	
ID No.: VS-33T	
Control Device ID No.: TOX	Control Device Type: Thermal incinerator (direct flame incinerator/regenerative thermal oxidizer)
Applicable Regulatory Requirement	
Name: 40 CFR Part 60, Subpart Kb	SOP Index No.: 60KB-TOX
Pollutant: VOC	Main Standard: [G]§ 60.112b(a)(3)
Monitoring Information	
Indicator: Firebox Temperature	
Minimum Frequency: Once per week	
Averaging Period: N/A	
Deviation Limit: Minimum firebox temperature of 1,800 degrees F.	
Periodic Monitoring Text: Monitor and record the firebox temperature in the thermal oxidizer. The temperature measurement device shall be installed, calibrated, and maintained according to accepted practice and the manufacturer's specifications. Any monitoring data below the minimum limit shall be considered and reported as a deviation.

Permit Shield

Permit Shield

The Executive Director of the TCEQ has determined that the permit holder is not required to comply with the specific regulation(s) identified for each emission unit, group, or process in this table.

Unit / Group / Process ID No.	Group / Inclusive Units	Regulation	Basis of Determination
AKMU-P	N/A	30 TAC Chapter 115, Storage of VOCs	Vessel is less than 1,000 gallons capacity.
AKMU-P	N/A	40 CFR Part 60, Subpart Kb	Vessel is less than 75 cubic meters capacity.
AKMU-TK1	N/A	30 TAC Chapter 115, Storage of VOCs	Vessel is less than 1,000 gallons capacity.
AKMU-TK1	N/A	40 CFR Part 60, Subpart Kb	Vessel is less than 75 cubic meters capacity.
AKMU-TK2	N/A	30 TAC Chapter 115, Storage of VOCs	Vessel is less than 1,000 gallons capacity.
AKMU-TK2	N/A	40 CFR Part 60, Subpart Kb	Vessel is less than 75 cubic meters capacity.
BLCH-TK	N/A	30 TAC Chapter 115, Storage of VOCs	Vessel does not store volatile organic liquid.
BLCH-TK	N/A	40 CFR Part 60, Subpart Kb	Vessel does not store volatile organic liquid.
CAUS-1	N/A	30 TAC Chapter 115, Storage of VOCs	Vessel does not store volatile organic liquid.
CAUS-1	N/A	40 CFR Part 60, Subpart Kb	Vessel does not store volatile organic liquid.
CL5898	N/A	30 TAC Chapter 115, Storage of VOCs	Vessel is less than 1,000 gallons capacity.
CL5898	N/A	40 CFR Part 60, Subpart Kb	Vessel is less than 75 cubic meters capacity.
COOLTOW	N/A	40 CFR Part 63, Subpart Q	Chromium is not used in the cooling water.
COOLTOW2	N/A	40 CFR Part 63, Subpart Q	Chromium is not used in the cooling water.
EMGEN	N/A	40 CFR Part 60, Subpart IIII	Engine manufactured before July 11, 2005.
EMGEN	N/A	40 CFR Part 63, Subpart ZZZZ	Existing emergency stationary RICE with > 500 brake HP at a major source of HAPs and does not operate/is not contractually obligated to be available for > 15 hours per calendar year for the purposes specified later in rule text.
FL-2	N/A	30 TAC Chapter 117, Subchapter B	Flares are exempted from the regulation.
FUEL-2	N/A	30 TAC Chapter 115, Storage of VOCs	Vessel is less than 1,000 gallons capacity.

Permit Shield

The Executive Director of the TCEQ has determined that the permit holder is not required to comply with the specific regulation(s) identified for each emission unit, group, or process in this table.

Unit / Group / Process ID No.	Group / Inclusive Units	Regulation	Basis of Determination
FUEL-2	N/A	40 CFR Part 60, Subpart Kb	Vessel is less than 75 cubic meters capacity.
H2SO4	N/A	40 CFR Part 60, Subpart Kb	Tank capacity is less than 75 cubic meters.
HE-470	N/A	30 TAC Chapter 115, Storage of VOCs	Process vessel and not a storage vessel.
HE-470	N/A	40 CFR Part 60, Subpart Kb	Process vessel and not a storage vessel.
HE-471	N/A	30 TAC Chapter 115, Storage of VOCs	Process vessel and not a storage vessel.
HE-471	N/A	40 CFR Part 60, Subpart Kb	Process vessel and not a storage vessel.
L1_2-POLY	N/A	30 TAC Chapter 115, Storage of VOCs	Vessel is less than 1,000 gallons capacity.
L1_2-POLY	N/A	40 CFR Part 60, Subpart Kb	Vessel is less than 75 cubic meters capacity.
L3-152	N/A	30 TAC Chapter 115, Storage of VOCs	Vessel does not store volatile organic liquid.
L3-152	N/A	40 CFR Part 60, Subpart Kb	Vessel does not store volatile organic liquid.
L3-260	N/A	30 TAC Chapter 115, Storage of VOCs	Vessel is less than 1,000 gallons capacity.
L3-260	N/A	40 CFR Part 60, Subpart Kb	Vessel is less than 75 cubic meters capacity.
L3-26T-3	N/A	30 TAC Chapter 115, Storage of VOCs	Process vessel and not a storage vessel.
L3-26T-3	N/A	40 CFR Part 60, Subpart Kb	Process vessel and not a storage vessel.
L3-28T-3	N/A	30 TAC Chapter 115, Storage of VOCs	Process vessel and not a storage vessel.
L3-28T-3	N/A	40 CFR Part 60, Subpart Kb	Process vessel and not a storage vessel.
L3-37T-3	N/A	30 TAC Chapter 115, Storage of VOCs	Process vessel and not a storage vessel.
L3-37T-3	N/A	40 CFR Part 60, Subpart Kb	Process vessel and not a storage vessel.
L3-45T-3	N/A	30 TAC Chapter 115, Storage of VOCs	Process vessel and not a storage vessel.
L3-45T-3	N/A	40 CFR Part 60, Subpart Kb	Process vessel and not a storage vessel.
L3-78-3	N/A	30 TAC Chapter 115, Storage of VOCs	Process vessel and not a storage vessel.

Permit Shield

The Executive Director of the TCEQ has determined that the permit holder is not required to comply with the specific regulation(s) identified for each emission unit, group, or process in this table.

Unit / Group / Process ID No.	Group / Inclusive Units	Regulation	Basis of Determination
L3-78-3	N/A	40 CFR Part 60, Subpart Kb	Process vessel and not a storage vessel.
L3-AF	N/A	30 TAC Chapter 115, Storage of VOCs	Vessel is less than 1,000 gallons capacity.
L3-AF	N/A	40 CFR Part 60, Subpart Kb	Vessel is less than 75 cubic meters capacity.
L3-BLEACH	N/A	30 TAC Chapter 115, Storage of VOCs	Vessel is less than 1,000 gallons capacity.
L3-BLEACH	N/A	40 CFR Part 60, Subpart Kb	Vessel is less than 75 cubic meters capacity.
L3-CL5898	N/A	30 TAC Chapter 115, Storage of VOCs	Vessel is less than 1,000 gallons capacity.
L3-CL5898	N/A	40 CFR Part 60, Subpart Kb	Vessel is less than 75 cubic meters capacity.
L3-POLY	N/A	30 TAC Chapter 115, Storage of VOCs	Vessel is less than 1,000 gallons capacity.
L3-POLY	N/A	40 CFR Part 60, Subpart Kb	Vessel is less than 75 cubic meters capacity.
NEUT-1	N/A	40 CFR Part 60, Subpart Kb	Storage vessel is greater than 75 cubic meters and less than 151 cubic meters storing volatile organic liquid with vapor pressure less than 15.0 kPa.
SPT-AF	N/A	30 TAC Chapter 115, Storage of VOCs	Vessel is less than 1,000 gallons capacity.
SPT-AF	N/A	40 CFR Part 60, Subpart Kb	Vessel is less than 75 cubic meters capacity.
SPT-DIS	N/A	30 TAC Chapter 115, Storage of VOCs	Vessel is less than 1,000 gallons capacity.
SPT-DIS	N/A	40 CFR Part 60, Subpart Kb	Vessel is less than 75 cubic meters capacity.
SURCT	N/A	30 TAC Chapter 115, Surface Coating Operations	Surface coating of fixed immovable structures not included in the list of surface coating processes in 115.420(a).
SURCT	N/A	40 CFR Part 63, Subpart MMMM	Surface coating operations that occur due to facility maintenance operations.
TA-004	N/A	30 TAC Chapter 115, Storage of VOCs	Process vessel and not a storage vessel.

Permit Shield

The Executive Director of the TCEQ has determined that the permit holder is not required to comply with the specific regulation(s) identified for each emission unit, group, or process in this table.

Unit / Group / Process ID No.	Group / Inclusive Units	Regulation	Basis of Determination
TA-004	N/A	40 CFR Part 60, Subpart Kb	Process vessel and not a storage vessel.
TTANK	N/A	30 TAC Chapter 115, Storage of VOCs	Storage tank has a storage capacity less than 1,000 gallons.
TTANK	N/A	40 CFR Part 60, Subpart Kb	Tank capacity is less than 75 cubic meters.
VE-020	N/A	30 TAC Chapter 115, Storage of VOCs	Process vessel and not a storage vessel.
VE-020	N/A	40 CFR Part 60, Subpart Kb	Process vessel and not a storage vessel.
VE-025	N/A	30 TAC Chapter 115, Storage of VOCs	Process vessel and not a storage vessel.
VE-025	N/A	40 CFR Part 60, Subpart Kb	Process vessel and not a storage vessel.
VE-030	N/A	30 TAC Chapter 115, Storage of VOCs	Vessel is less than 1,000 gallons capacity.
VE-030	N/A	40 CFR Part 60, Subpart Kb	Vessel is less than 75 cubic meters capacity.
VE-101	N/A	30 TAC Chapter 115, Storage of VOCs	Process vessel and not a storage vessel.
VE-101	N/A	40 CFR Part 60, Subpart Kb	Process vessel and not a storage vessel.
VE-102	N/A	30 TAC Chapter 115, Storage of VOCs	Process vessel and not a storage vessel.
VE-102	N/A	40 CFR Part 60, Subpart Kb	Process vessel and not a storage vessel.
VE-170	N/A	30 TAC Chapter 115, Storage of VOCs	Process vessel and not a storage vessel.
VE-170	N/A	40 CFR Part 60, Subpart Kb	Process vessel and not a storage vessel.
VE-171	N/A	30 TAC Chapter 115, Storage of VOCs	Process vessel and not a storage vessel.
VE-171	N/A	40 CFR Part 60, Subpart Kb	Process vessel and not a storage vessel.
VE-350	N/A	30 TAC Chapter 115, Storage of VOCs	Process vessel and not a storage vessel.
VE-350	N/A	40 CFR Part 60, Subpart Kb	Process vessel and not a storage vessel.
VE-401	N/A	30 TAC Chapter 115, Storage of VOCs	Process vessel and not a storage vessel.

Permit Shield

The Executive Director of the TCEQ has determined that the permit holder is not required to comply with the specific regulation(s) identified for each emission unit, group, or process in this table.

Unit / Group / Process ID No.	Group / Inclusive Units	Regulation	Basis of Determination
VE-401	N/A	40 CFR Part 60, Subpart Kb	Process vessel and not a storage vessel.
VE-450	N/A	30 TAC Chapter 115, Storage of VOCs	Process vessel and not a storage vessel.
VE-450	N/A	40 CFR Part 60, Subpart Kb	Process vessel and not a storage vessel.
VE-451	N/A	30 TAC Chapter 115, Storage of VOCs	Process vessel and not a storage vessel.
VE-451	N/A	40 CFR Part 60, Subpart Kb	Process vessel and not a storage vessel.
VE-471	N/A	30 TAC Chapter 115, Storage of VOCs	Process vessel and not a storage vessel.
VE-471	N/A	40 CFR Part 60, Subpart Kb	Process vessel and not a storage vessel.
VE-472	N/A	40 CFR Part 60, Subpart Kb	Vessel is less than 75 cubic meters capacity.
VE-701	N/A	30 TAC Chapter 115, Storage of VOCs	Process vessel and not a storage vessel.
VE-701	N/A	40 CFR Part 60, Subpart Kb	Process vessel and not a storage vessel.
VE-902	N/A	30 TAC Chapter 115, Storage of VOCs	Process vessel and not a storage vessel.
VE-902	N/A	40 CFR Part 60, Subpart Kb	Process vessel and not a storage vessel.
VE-911	N/A	30 TAC Chapter 115, Storage of VOCs	Process vessel and not a storage vessel.
VE-911	N/A	40 CFR Part 60, Subpart Kb	Process vessel and not a storage vessel.
VS-112	N/A	30 TAC Chapter 115, Vent Gas Controls	Vent gas stream is a combustion unit exhaust stream from a unit which is not being used as a control device for any vent gas stream subject to this division and originating from a non-combustion source.
VS-118T	N/A	40 CFR Part 60, Subpart Kb	The vessel contains a volatile organic liquid with a maximum true vapor pressure less than 0.5 psia (3.5 kPa).
VS-127T	N/A	30 TAC Chapter 115, Storage of VOCs	Process vessel and not a storage vessel.

Permit Shield

The Executive Director of the TCEQ has determined that the permit holder is not required to comply with the specific regulation(s) identified for each emission unit, group, or process in this table.

Unit / Group / Process ID No.	Group / Inclusive Units	Regulation	Basis of Determination
VS-127T	N/A	40 CFR Part 60, Subpart Kb	Process vessel and not a storage vessel.
VS-131T	N/A	30 TAC Chapter 115, Storage of VOCs	Process vessel and not a storage vessel.
VS-131T	N/A	40 CFR Part 60, Subpart Kb	Process vessel and not a storage vessel.
VS-174P	N/A	30 TAC Chapter 115, Storage of VOCs	Process vessel and not a storage vessel.
VS-174P	N/A	40 CFR Part 60, Subpart Kb	Process vessel and not a storage vessel.
VS-210T	N/A	30 TAC Chapter 115, Storage of VOCs	Process vessel and not a storage vessel.
VS-210T	N/A	40 CFR Part 60, Subpart Kb	Process vessel and not a storage vessel.
VS-210T-1	N/A	30 TAC Chapter 115, Storage of VOCs	Process vessel and not a storage vessel.
VS-210T-1	N/A	40 CFR Part 60, Subpart Kb	Process vessel and not a storage vessel.
VS-23T	N/A	40 CFR Part 60, Subpart Kb	Tank capacity is less than 75 cubic meters.
VS-23T-1	N/A	30 TAC Chapter 115, Storage of VOCs	Process vessel and not a storage vessel.
VS-23T-1	N/A	40 CFR Part 60, Subpart Kb	Process vessel and not a storage vessel.
VS-24T	N/A	30 TAC Chapter 115, Storage of VOCs	Process vessel and not a storage vessel.
VS-24T	N/A	40 CFR Part 60, Subpart Kb	Tank is defined as a process vessel according §60.111b.
VS-24T-1	N/A	30 TAC Chapter 115, Storage of VOCs	Process vessel and not a storage vessel.
VS-24T-1	N/A	40 CFR Part 60, Subpart Kb	Process vessel and not a storage vessel.
VS-255T	N/A	30 TAC Chapter 115, Storage of VOCs	Tank capacity is less than 1000 gallons
VS-255T	N/A	40 CFR Part 60, Subpart Kb	Tank Capacity is less than 75 cubic meters
VS-259T	N/A	30 TAC Chapter 115, Storage of VOCs	Vessel is less than 1,000 gallons capacity.
VS-259T	N/A	40 CFR Part 60, Subpart Kb	Vessel is less than 75 cubic meters capacity.

Permit Shield

The Executive Director of the TCEQ has determined that the permit holder is not required to comply with the specific regulation(s) identified for each emission unit, group, or process in this table.

Unit / Group / Process ID No.	Group / Inclusive Units	Regulation	Basis of Determination
VS-262T	N/A	30 TAC Chapter 115, Storage of VOCs	Process vessel and not a storage vessel.
VS-262T	N/A	40 CFR Part 60, Subpart Kb	Process vessel and not a storage vessel.
VS-263T	N/A	40 CFR Part 60, Subpart Kb	Tank capacity is less than 75 cubic meters.
VS-264T	N/A	40 CFR Part 60, Subpart Kb	Material stored is not a volatile organic liquid.
VS-26T	N/A	30 TAC Chapter 115, Storage of VOCs	Process vessel and not a storage vessel.
VS-26T	N/A	40 CFR Part 60, Subpart Kb	Process vessel and not a storage vessel.
VS-26T-1	N/A	30 TAC Chapter 115, Storage of VOCs	Process vessel and not a storage vessel.
VS-26T-1	N/A	40 CFR Part 60, Subpart Kb	Process vessel and not a storage vessel.

VS-54T	N/A	40 CFR Part 60, Subpart Kb	Process vessel and not a storage vessel.
VS-54T-1	N/A	30 TAC Chapter 115, Storage of VOCs	Process vessel and not a storage vessel.
VS-54T-1	N/A	40 CFR Part 60, Subpart Kb	Process vessel and not a storage vessel.
VS-55T	N/A	30 TAC Chapter 115, Storage of VOCs	Process vessel and not a storage vessel.
VS-55T	N/A	40 CFR Part 60, Subpart Kb	Process vessel and not a storage vessel.
VS-56T	N/A	30 TAC Chapter 115, Storage of VOCs	Process vessel and not a storage vessel.
VS-56T	N/A	40 CFR Part 60, Subpart Kb	Process vessel and not a storage vessel.
VS-59T-1	N/A	30 TAC Chapter 115, Storage of VOCs	Tank capacity is less than 1,000 gallons.
VS-59T-1	N/A	40 CFR Part 60, Subpart Kb	Tank capacity is less than 75 cubic meters.
VS-60T	N/A	40 CFR Part 60, Subpart Kb	Tank capacity is less than 75 cubic meters.
VS-61T	N/A	40 CFR Part 60, Subpart Kb	Tank capacity is less than 75 cubic meters.
VS-62C	N/A	30 TAC Chapter 117, Subchapter B	Flares are exempted from the regulation.
VS-62T	N/A	30 TAC Chapter 115, Storage of VOCs	Process vessel and not a storage vessel.
VS-62T	N/A	40 CFR Part 60, Subpart Kb	Process vessel and not a storage vessel.
VS-63T	N/A	40 CFR Part 60, Subpart Kb	Tank capacity is less than 75 cubic meters.
VS-64T	N/A	30 TAC Chapter 115, Storage of VOCs	Process vessel and not a storage vessel.
VS-64T	N/A	40 CFR Part 60, Subpart Kb	Process vessel and not a storage vessel.
VS-66T	N/A	30 TAC Chapter 115, Storage of VOCs	Process vessel and not a storage vessel.
VS-66T	N/A	40 CFR Part 60, Subpart Kb	Process vessel and not a storage vessel.
VS-71	N/A	30 TAC Chapter 115, Vent Gas Controls	Vent gas stream is a combustion unit exhaust

Permit Shield

The Executive Director of the TCEQ has determined that the permit holder is not required to comply with the specific regulation(s) identified for each emission unit, group, or process in this table.

Unit / Group / Process ID No.	Group / Inclusive Units	Regulation	Basis of Determination
			stream from a unit which is not being used as a control device for any vent gas stream subject to this Division and originates from a non-combustion source.
VS-71T	N/A	30 TAC Chapter 115, Storage of VOCs	Process vessel and not a storage vessel.
VS-71T	N/A	40 CFR Part 60, Subpart Kb	Tank is defined as a process vessel according §60.111b.
VS-71T-1	N/A	30 TAC Chapter 115, Storage of VOCs	Process vessel and not a storage vessel.
VS-71T-1	N/A	40 CFR Part 60, Subpart Kb	Tank is defined as a process vessel according §60.111b.
VS-73	N/A	30 TAC Chapter 115, Vent Gas Controls	Vent gas stream is a combustion unit exhaust stream from a unit which is not being used as a control device for any vent gas stream subject to this Division and originates from a non-combustion source.
VS-73T	N/A	40 CFR Part 60, Subpart Kb	Vessel is less than 75 cubic meters capacity.
VS-74T	N/A	30 TAC Chapter 115, Storage of VOCs	Process vessel and not a storage vessel.
VS-74T	N/A	40 CFR Part 60, Subpart Kb	Process vessel and not a storage vessel.
VS-74T-1	N/A	30 TAC Chapter 115, Storage of VOCs	Process vessel and not a storage vessel.
VS-74T-1	N/A	40 CFR Part 60, Subpart Kb	Process vessel and not a storage vessel.
VS-75T	N/A	30 TAC Chapter 115, Storage of VOCs	Process vessel and not a storage vessel.
VS-75T	N/A	40 CFR Part 60, Subpart Kb	Process vessel and not a storage vessel.
VS-75T-1	N/A	30 TAC Chapter 115, Storage of VOCs	Process vessel and not a storage vessel.
VS-75T-1	N/A	40 CFR Part 60, Subpart Kb	Process vessel and not a storage vessel.

Permit Shield

The Executive Director of the TCEQ has determined that the permit holder is not required to comply with the specific regulation(s) identified for each emission unit, group, or process in this table.

Unit / Group / Process ID No.	Group / Inclusive Units	Regulation	Basis of Determination
VS-76T	N/A	30 TAC Chapter 115, Storage of VOCs	Process vessel and not a storage vessel.
VS-76T	N/A	40 CFR Part 60, Subpart Kb	Process vessel and not a storage vessel.
VS-76T-1	N/A	30 TAC Chapter 115, Storage of VOCs	Process vessel and not a storage vessel.
VS-76T-1	N/A	40 CFR Part 60, Subpart Kb	Process vessel and not a storage vessel.
VS-77T	N/A	30 TAC Chapter 115, Storage of VOCs	Capacity is less than 1,000 gallons.
VS-77T	N/A	40 CFR Part 60, Subpart Kb	Tank capacity is less than 75 cubic meters.
VS-79T	N/A	30 TAC Chapter 115, Storage of VOCs	Process vessel and not a storage vessel.
VS-79T	N/A	40 CFR Part 60, Subpart Kb	Process vessel and not a storage vessel.
VS-80T	N/A	30 TAC Chapter 115, Storage of VOCs	Tank capacity is less than 1,000 gallons.
VS-80T	N/A	40 CFR Part 60, Subpart Kb	Tank capacity is less than 75 cubic meters.
VS-81T	N/A	40 CFR Part 60, Subpart Kb	Tank capacity is less than 75 cubic meters.
VS-82T	N/A	40 CFR Part 60, Subpart Kb	Tank capacity is less than 75 cubic meters.
VS-84T	N/A	30 TAC Chapter 115, Storage of VOCs	Process vessel and not a storage vessel.
VS-84T	N/A	40 CFR Part 60, Subpart Kb	Process vessel and not a storage vessel.
VS-85	N/A	30 TAC Chapter 115, Vent Gas Controls	Vent gas stream is a combustion unit exhaust stream from a unit which is not being used as a control device for any vent gas stream subject to this Division and originates from a non-combustion source.
VS-86T	N/A	30 TAC Chapter 115, Storage of VOCs	Process vessel and not a storage vessel.

VS-91T	N/A	30 TAC Chapter 115, Storage of VOCs	Tank capacity is less than 1,000 gallons.
VS-91T	N/A	40 CFR Part 60, Subpart Kb	Tank capacity is less than 75 cubic meters.

New Source Review Authorization References

New Source Review Authorization References

The New Source Review authorizations listed in the table below are applicable requirements under 30 TAC Chapter 122 and enforceable under this operating permit.

Title 30 TAC Chapter 116 Permits, Special Permits, and Other Authorizations (Other Than Permits By Rule, PSD Permits, or NA Permits) for the Application Area.	
Authorization No.: 19074	Issuance Date: 06/09/2020
Permits By Rule (30 TAC Chapter 106) for the Application Area	
Number: 106.261	Version No./Date: 11/01/2003
Number: 106.262	Version No./Date: 11/01/2003
Number: 106.263	Version No./Date: 11/01/2001
Number: 106.373	Version No./Date: 09/04/2000
Number: 106.454	Version No./Date: 11/01/2001
Number: 106.472	Version No./Date: 09/04/2000

New Source Review Authorization References by Emissions Unit

The following is a list of New Source Review (NSR) authorizations for emission units listed elsewhere in this operating permit. The NSR authorizations are applicable requirements under 30 TAC Chapter 122 and enforceable under this operating permit.

Unit/Group/Process ID No.	Emission Unit Name/Description	New Source Review Authorization**
AKMU-P	ADDITIVE K MAKE-UP POT	19074
AKMU-TK1	ADDITIVE K MAKE-UP TANK	19074
AKMU-TK2	ADDITIVE K MAKE-UP TANK	19074
BLCH-TK	BLEACH TANK	106.472/09/04/2000
CAUS-1	AQUEOUS CAUSTIC SOLUTION TANK	106.472/09/04/2000
CL5898	DISPERSANT SOLUTION TOTE	106.472/09/04/2000
COOLTOW	COOLING TOWER	19074
COOLTOW2	COOLING TOWER 2 (LINE 3)	19074
EMGEN	EMERGENCY GENERATOR	19074
EMGEN2	EMERGENCY GENERATOR 2	19074
FL-2	EVOH FLARE	19074
FUEL-2	DIESEL TANK FOR AUXILIARY EQUIPMENT	106.472/09/04/2000
GC1	ANALYZER VENT	19074
GC2	ANALYZER VENT	19074
GC3	ANALYZER VENT	19074
H2SO4	SULFURIC ACID STORAGE TANK	19074
HE-252	RAC COLUMN O/H CONDENSER (LINE 3)	19074
HE-301	ALCOHOLYSIS O/H CONDENSER (LINE 3)	19074
HE-350	FLASHER O/H CONDENSER (LINE 3)	19074

Appendix A

Acronym List

The following abbreviations or acronyms may be used in this permit:

ACFM ..... actual cubic feet per minute
AMOC ..... alternate means of control
ARP ..... Acid Rain Program
ASTM ..... American Society of Testing and Materials
B/PA ..... Beaumont/Port Arthur (nonattainment area)
CAM ..... Compliance Assurance Monitoring
CD ..... control device
CEMS ..... continuous emissions monitoring system
CFR ..... Code of Federal Regulations
COMS ..... continuous opacity monitoring system
CVS ..... closed vent system
D/FW ..... Dallas/Fort Worth (nonattainment area)
EP ..... emission point
EPA ..... U.S. Environmental Protection Agency
EU ..... emission unit
FCAA Amendments ..... Federal Clean Air Act Amendments
FOP ..... federal operating permit
gr/100 scf ..... grains per 100 standard cubic feet
HAP ..... hazardous air pollutant
H/G/B ..... Houston/Galveston/Brazoria (nonattainment area)
H_2S ..... hydrogen sulfide
ID No. ..... identification number
lb/hr ..... pound(s) per hour
MACT ..... Maximum Achievable Control Technology (40 CFR Part 63)
MMBtu/hr ..... Million British thermal units per hour
NA ..... nonattainment
N/A ..... not applicable
NADB ..... National Allowance Data Base

Follow Up Flag: Follow up
Flag Status: Flagged

Categories: Red Category

Carolyn,

We have no additional comments on the revised WDP. I have also attached the most recent "Response to WDP Comments and Unresolved Item Answers" Word document with Noltex responses on all items in the document. I addition, the revised OP-ACPS is attached showing all emission units are in compliance.

Regarding the public notice location, all of the Harris County public library locations are still closed; therefore, Noltex is not aware of a public place that is open to make a copy of the application documents and draft permit physically available. However, we understand that due to the COVID situation causing public places to close that would otherwise be available to maintain copies of documents for public notice, the TCEQ has setup a system to provide for online availability of these documents on the TCEQ website. Please let us know what Noltex needs to do to utilize the TCEQ online system for public notice documents.

Noltex prefers to wait provide a signed OP-CRO1 to certify all information submitted on or after 6/26/2020 until all items are resolved.

Let us know if you have any additional questions or comments.

Thanks,

Stuart

Subject: RE: Working Draft Permit -- FOP O1301/Project 29817, Noltex, L.L.C., EVOH Copolymer Facility

Stuart,

Attached is a revised draft permit implementing the WDP comments as well as changes from your responses to my unresolved item list. Also attached is a document addressing the changes to the draft. The majority of that document just describes the change or confirms that issues are resolved. Five items in the document (#1-2, 12, and 16-17) require or could potentially require additional information to be submitted.

I will begin preparing the file for public notice. Besides a response to the documents attached, there are two things I need from you all:

1. A public notice location. The applicant listed TCEQ Region 12, but our regional offices are currently closed to the public, and may not be available yet during your notice. Therefore, another location is needed.
2. OP-CRO1 certifying application updates made over the course of the project. The first correspondence I have from you all was the email on 6/26/2020 about the additional changes that were going to be submitted, so I'd recommend using the Time Period option, with a start date of 6/26/2020 and an end date of when you respond. That range should cover the other submittals that have been made. Please note that in the attached document, there are a few items where you may be submitting additional information, so if you would like to wait until those items are resolved, to ensure that only one OP-CRO1 needs to be obtained, that would be acceptable.

Please respond to the revised draft and provide this information by **Monday, April 5, 2021**. If you are including the OP-CRO1 at that time, you can email me a copy to meet the deadline, but please follow up with the original OP-CRO1 in the mail.

Feel free to email with any questions. We can also arrange a phone call or virtual meeting over MS Teams if needed.

Sincerely,

Carolyn Maus, P.E.

Thanks, Stuart! I will be going through your response and revising the WDP as needed. If I need anything further to resolve any of the items, I will let you know.

I'll be taking some vacation time over the next two weeks so I will dive into this when I return on January 4.

Subject: RE: Working Draft Permit -- FOP O1301/Project 29817, Noltex, L.L.C., EVOH Copolymer Facility

Carolyn,

Thanks for all of your hard work preparing the Working Draft Permit. You were correct, it did take awhile to go through the Unresolved Items list and the Working Draft Permit.

Please find attached the following:

1. Working Draft Permit with Noltex comments.
2. Unresolved Items list with Noltex responses.
3. Revised forms as related to responses on the Unresolved Items list and addition of two (2) emission units that were inadvertently left off of the forms submitted for the renewal/revision. Only items that changed on the forms are submitted, with the exception of the entire OP-REQ1 form, as noted in the WDP guidance. The two (2) additional units are:
   a. GC3 – Analyzer Vent
   b. L3-72-3 – Fluidized Bed Dryer Exhaust Air Filter (Line 3)

Regarding submittal of the Certification by Responsible Official (Form OP-CRO1), Noltex prefers to wait to submit this certification for the application updates and the Working Draft Permit until changes from the comments have been completed.

Let us know if you have any additional questions or comments.

Thanks,

Stuart

Subject: Working Draft Permit -- FOP O1301/Project 29817, Noltex, L.L.C., EVOH Copolymer Facility

Hi Stuart,

I have conducted a technical review of the significant revision application and the updated renewal application forms for Noltex, L.L.C, EVOH Copolymer Facility. An electronic copy of the Working Draft Permit (WDP) is attached for your review. This WDP contains the TCEQ determination of applicable requirements based on the information submitted in your application, and any updates provided. My apologies for the extreme delay since receiving your updated materials in August – the updates were much more extensive than I had anticipated. I've also been involved with some internal process improvement initiatives that took away a lot of my application review time.

Please review the WDP and submit to me any comments you have on the working draft permit by **Friday, December 18, 2020**. In addition, please address the questions on the attached Unresolved Items list. Please submit a written response by this deadline, even if you are not making any comments on the content of the WDP. We had originally agreed that Noltex would review the draft in two weeks, but I've tacked on an extra week due to the increased size of the permit and the number of questions I included. We can certainly adjust the timeline further if that's not sufficient.

The third attachment is a draft version of the public notice letter. Since Noltex has agreed to publish notice quickly once we actually send out the public notice package, I wanted to give you an advance copy so that they can begin preparing the signs and making preliminary publication arrangements. The sign format is included in the letter and will not change. The notice itself is also included, but there will still be two updates to it. The Notice Issuance Date at the end will be the date we sent out the letter, which I have marked TBD for now. Second, I'll need another public notice location from Noltex. The application listed TCEQ Region 12, but our regional offices are currently closed to the public, and may not be available yet during your notice. I've marked that spot as TBD in the notice too. The public notice letter is just for planning purposes. We still need to go through the WDP review process before we send out the official notice letter, so do not actually publish anything at this time.

Please review the second portion of the "SOP Technical Review Fact Sheet" located at http://www.tceq.texas.gov/assets/public/permitting/air/Guidance/Title_V/sop_wdp_factsheet.pdf. This guidance contains important information regarding WDP review and comment procedures.

Note that a Certification by Responsible Official (Form OP-CRO1) for any uncertified application information, including application updates supporting the WDP comments, is typically required to be submitted with your response to this email. After final review of the WDP, additional changes supported by application updates may require certification. I

will advise you of these changes at a later date. Upon final approval of the Public Notice/Announcement Authorization Package, a duly signed OP-CRO1 form may be required which includes the specific dates or time period of all submitted application documentation that was not previously certified. Therefore, if you wish to wait on submitting the OP-CRO1 until we resolve the WDP comments, that would also be acceptable.

Contact me if you have any questions regarding the guidelines, the project schedule, or any other details regarding your application or permit.

Thank you for your cooperation.

Sincerely,

Carolyn Maus, P.E.

Texas Commission on Environmental Quality
Form OP-ACPS
Application Compliance Plan and Schedule

Date: 04/05/2021	**Regulated Entity No.:** RN101049518	**Permit No.:** O1301
Company Name: Noltex LLC		**Area Name:** EVOH Copolymer Facility

- Part 1 of this form must be submitted with all initial FOP applications and renewal applications.
- The Responsible Official must use Form OP-CRO1 (Certification by Responsible Official) to certify information contained in this form in accordance with 30 TAC § 122.132(d)(8).

Part 1

A.	**Compliance Plan — Future Activity Committal Statement**	
The *Responsible Official* commits, utilizing reasonable effort, to the following: As the responsible official it is my intent that all emission units shall continue to be in compliance with all applicable requirements they are currently in compliance with, and all emission units shall be in compliance by the compliance dates with any applicable requirements that become effective during the permit term.		
B.	**Compliance Certification - Statement for Units in Compliance* (Indicate response by entering an "X" in the appropriate column)**	
1.	With the exception of those emission units listed in the Compliance Schedule section of this form (Part 2, below), and based, at minimum, on the compliance method specified in the associated applicable requirements, are all emission units addressed in this application in compliance with all their respective applicable requirements as identified in this application?	☒ YES ☐ NO
2.	Are there any non-compliance situations addressed in the Compliance Schedule Section of this form (Part 2)?	☐ YES ☒ NO
3.	If the response to Item B.2, above, is "Yes," indicate the total number of Part 2 attachments included in this submittal. *(For reference only)*	
*	*For Site Operating Permits (SOPs), the complete application should be consulted for applicable requirements and their corresponding emission units when assessing compliance status.* *For General Operating Permits (GOPs), the application documentation, particularly Form OP-REQ1 should be consulted as well as the requirements contained in the appropriate General Permits portion of 30 TAC Chapter 122.* *Compliance should be assessed based, at a minimum, on the required monitoring, testing, record keeping, and/or reporting requirements, as appropriate, associated with the applicable requirement in question.*	

Response to Unresolved Item Answers (Items 1-19) and WDP Comments (Items 20-29) – Permit O1301, Project 29817

1. In addition to Keith Hamilton, our database also lists Kathy Cameron as a technical contact. Should Kathy Cameron be removed or is she still a valid contact? (It is fine to have multiple people listed.)

   Kathy Cameron is no longer with Noltex, so she may be removed and replaced with Laura Burnett. Let us know if you need any additional contact information for Laura Burnett.

   TCEQ Response: This is the information I have for Laura based on the NSR database – if anything needs to be updated, please let me know.

   Laura Burnett, Senior Environmental Engineer, Noltex L.L.C.
   12220 Strang Rd, La Porte, TX 77571-9740
   Phone: (281) 842-5039
   Fax: (281) 842-5097
   Email: laura_burnett@noltex.com

   This contact information is correct.

2. For the compliance plan, I've adjusted/added language in the milestones and added some citations pertaining to the Group 1 requirements. These are just for clarity. Otherwise, the plan is acceptable. If you have any questions about the adjustments I made or would like further changes, please let me know.

   Noltex has completed the MON analysis and all documentation. No further action is required. They are currently in compliance with the applicable MON requirements. The compliance plan can be removed from the permit. Let us know if you need anything else from us.

   TCEQ Response: I have removed the compliance plan from the permit. Please submit an OP-ACPS indicating there are no units out of compliance.

   Revised OP-ACPS is attached to the email response.

3. OP-REQ1 Corrections/Clarifications Needed

   a. Question I.A.4 was answered as "Yes". What that means is that each vent subject to Chapter 111, Visible Emissions has been listed as a unit on the OP-SUM, Tables 1a-1b of Form OP-UA15, and the OP-MON if monitoring is needed, and each vent will appear as a unit in the permit. The existing permit had our Special Terms and Conditions for vents subject to 111.111(a)(1)(B) rather than listing these vents as units. For now, I left I.A.4 as "No" and included these site-wide terms. If you did intend for I.A.4 to be "Yes", please provide the unit-specific forms mentioned for all 111.111(a)(1)(B) vents.

      Question I.A.4 on the OP-REQ1 Form should be "No", because each vent is not meant to be addressed individually.

   b. Question VIII.GG.1 should be "Yes" and Question VIII.GG.2 should say "Subpart ZZZZ". (EMGEN2 has limited requirement under this rule.)

      Correct.

      TCEQ Response for 3.a-b: Thanks – I have updated our database accordingly.

   c. Question XI.J.3 was previously "No" but was now left blank. Please provide answer.

      This was discussed with Laura Burnett at Noltex. Although the site previously generated VOC credits for replacement of an existing control device with a control device with a higher DRE, the generated credits have already been banked and sold. Given that the site does not currently participate in the Banking and Trading Program, the answers to Questions XI.J.2 and XI.J.3 should both be "No". The corrected OP-REQ1 Form with changes marked using track changes is attached to the email response. Let us know if you need any additional information.

      TCEQ Response: I have updated the permit terms based on the revised answers.

   d. Section XII.H should list NSR permit 19074 with its latest issuance date. Please submit a corrected page.

      The corrected OP-REQ1 Form with changes marked using track changes is attached to the email response.

TCEQ Response: Thanks – no further information needed.

An alteration for the NSR permit was issued 1/26/2021. Does the date for the permit need to change on the Title V draft?

e. The NSR database now includes two active PBR registrations for this site - #160783 and #163036 – for PBRs 106.261 and 106.262. Please include these two PBRs in section XII.I. Also, please let me know if any units are authorized by this registration so I can include the registration number in the permit. Finally, please update the OP-PBRSUP if needed.

PBR 160783 is an annual registration for fugitive equipment components added at the site. The only emission units affected by this PBR are the fugitive component emission units at the site (VS-93 and L3-93-3), which are already included in the Title V Permit.

PBR 163036 is an authorization for an addition to the Line 2 process which includes several process vessels which do not vent to atmosphere and are controlled by control devices authorized under the NSR Permit 19074. This authorization also includes additional fugitive components added to VS-93, which is already included in the Title V Permit. The VS-UWC1 process vessel is controlled by control devices TOX, VS-62C, and FL-2. The VS-UWC2, VS-UWC3, and VS-UWC4 process vessels are controlled by control device RTO.

Both of these PBRs are expected to be incorporated into the NSR Permit at the next amendment/renewal. A revised OP-PBRSUP Form is attached to the email response.

TCEQ Response: The PBRs and registration numbers have been added to units V-93 and L3-93F-3 in the permit.

4. OP-SUMR Clarifications Needed

a. The unit name for VS-23T-1 is listed as "Waste Organics Tank", which is already the name for VS-23T. Previously VS-23T-1 had a different name, so please confirm you'd like the same name for both tanks.

VS-23T should remain the Waste Organics Tank. VS-23T-1 should be the VAC Storage Tank. In addition, Noltex requests that the name of unit ID VS-61T be changed from #2 Waste Organics Tank to Multipurpose Tank to match the name used at the site for this tank.

TCEQ Response: The tank names have been updated in the permit.

b. Previously VS-220T was "Polymerization Reactor (Line 2) and VS-220T-1 was "Polymerization Reactor (Line 1)". This OP-SUMR has the Line 2 and Line 1 labels flipped now. Also, the OP-2 requests a completely different name - "Stripper O/H Condenser" - for both units. Please confirm the names you'd like me to use.

VS-220T should be Polymerization Reactor (Line 2). VS-220T-1 should be Polymerization Reactor (Line 1). The other name must have been a typo on the OP-SUMR.

TCEQ Response: Thanks for the confirmation – tank names are correct in the permit.

c. There are existing units VS-34 and VS-34-T1 on UA-15. The OP-2/OP-SUMR showed new units VS-34T and VS-34T-1 being added. Based on unit names, it seemed like these were the same as the existing units, so I just updated the old unit IDs (as well as the OP-UA and OP-REQ2 data). However, let me know if there should really be four units (VS-34, VS-34T, VS-34-T1, and VS-34T-1).

You are correct, there are only 2 units. Mistake in marking them as new on the OP-SUMR.

d. Significant revision application had "-20C Brine Storage Tank (Line 3)" for VE-025 and "+5C Brine Storage Tank (Line 3) for VE-020. Renewal application had "+5 deg Refrig Unit Tank (Line 3)" for VE-025 and "-20 deg Refrig Unit Tank (Line 3)" for VE-020. I used the newer information from the renewal application, but please confirm which unit names are correct.

Please use the names in the renewal application are correct as reflected in the current Working Draft Permit.

TCEQ Response to 4.c-d: Thanks for clarifying – no changes were needed in the permit.

e. Renewal application didn't mention changing unit name for TRUCKLOAD, but OP-SUMR had "Truck Loading Liquid" while existing unit had "Truck Liquid Loading" (matching NSR permit name). I updated to new information but let me know if that isn't correct.

Please name it Truck Liquid Loading to match the NSR.

TCEQ Response: Unit name has been updated in the permit.

f. FL-2 was not on OP-SUMR. I used "EVOH Flare" for unit name since that's what NSR MAERT has, but let me know if you'd like a different unit name.

Yes FL-2 should be EVOH Flare.

TCEQ Response: Thanks for clarifying - no changes were needed in the permit.

5. I removed the units from the permit with no applicability as requested on the renewal OP-2 (revision numbers 101-110 and 114). If we need to document any negative applicability UA data, please provide that. Otherwise, these units will also be removed from our database.
   Yes, these units need to be removed from the permit as they are not the final vent sources to control for applicability of vent source rules. There are other units after these units that vent gas directly to control and those units are included in the permit revisions. I don't believe any negative applicability is required; please let me know if you believe otherwise.
   Notes: Thanks for the explanation. You are correct that I do not need anything further for these units.
6. The OP-2 requested to add multiple units whose only data is on the OP-PBRSUP (revision numbers 127 and 141-152). To clarify, "unit IDs" that are needed for the purpose of filling out the OP-PBRSUP only and do not have any unit attribute data, OP-REQ2 data, etc. will not be included in our database or permit. These do not need to be listed on any other application forms besides the OP-PBRSUP. I don't need any further information about these, but just wanted to point this out for future applications. Let me know if you have any questions.
   Thanks, my assumption was that any unit required to be listed on a form was required to be included in the permit. I didn't see anything about PBR requirements in the Working Draft Permit other than the General Condition PBR compliance requirement in the New Source Review Authorization Requirements, which is the same as the existing permit. Just curious, does any information submitted on the OP-PBRSUP get included in the Title V Permit?
   TCEQ Response: The OP-PBRSUP is intended to be a comprehensive list of all sources authorized by PBRS and is kept in the permit file. In the Title V permit, we have a reference to the PBR Supplemental Table in the permit terms now. However, we have not changed our policies about what emission units will be included in the permit (those with applicable requirements or permit shields). For units that are already appearing in the permit for other reasons and are authorized by a registered PBR, we add the registration numbers to the NSR Authorization References by Emission Unit table, based on what is identified on the OP-SUMR. Therefore, the PBR-authorized units on the OP-SUMR and in the Title V permit will generally be a subset of those identified on the OP-PBRSUP. For the OP-SUMR, you should just continue to include on it the units you would have listed in the past (those with applicable requirements, permit shields, or simply negative applicability documentation on the UA forms), and provide the registration number for any of those using a PBR registration. Hope that clears up the situation!
7. For TTANK, the revision application included a permit shield request for Chapter 115. Did you also want to address NSPS Kb? (A permit shield is optional, but I noticed that many other units had both.)
   Yes please include a permit shield for NSPS Kb based on capacity of tank less than 75 m^3.
   TCEQ Response: A permit shield has been added to the permit.
8. There are some tanks that have Chapter 115 Vent Gas requirements (as well as permit shields for Chapter 115, Storage of VOCs and NSPS Kb stating that the tanks are process vessels), but then they also have MACT FFFF storage tank requirements. The unit IDs are L3-26T-3, L3-28T-3, VE-701, VS-23T-1, VS-26T-1, VS-28T, VS-28T-1, VS-32T, and VS-43T. Please clarify the applicable requirements for these tanks and provided updated unit attribute forms, if needed. It seems like one of the two scenarios below would be appropriate. (Also, once this is straightened out, there may be questions below for some of these IDs that will become irrelevant.)
   a. If these are process vessels (and the Chapter 115 vent gas requirements apply), then storage tank requirements from MACT FFFF would <u>not</u> apply, and they might need MACT FFFF process vent requirements instead?
      These vessels are bottoms receivers or surge control vessels within a continuous operation as defined in MACT FFFF. Bottoms receivers and surge control vessels are not defined as storage tanks in MACT FFFF. However, since the capacity of these bottoms receivers/surge control vessels meet the capacity and vapor pressure thresholds for a Group 1 storage tank they must meets the emission limits and work practice standards in MACT FFFF Table 4, per 40 CFR 63.2450(r). Since these are vessels integral to the process and are not defined as storage tanks in MACT FFFF, they do not meet the definition of storage tank in 30 TAC Chapter 115. Therefore, the emissions from these vessels are considered process vents under 30 TAC Chapter 115. In addition, the definition of process tank in NSPS Kb includes the following: "…In many process tanks, unit

operations such as reactions and blending are conducted. Other process tanks, such as surge control vessels and bottoms receivers, however, may not involve unit operations."

TCEQ Response for 8.a-b: Thank you – that explanation clears things up. No changes needed to the permit.

b. On the other hand, if these are storage tanks, then wouldn't Chapter 115, Storage of VOCs apply instead of Chapter 115 Vent Gas? And might they also need applicable requirements from NSPS Kb?

Please see description above.

9. OP-UA3 Clarifications Needed:
   a. Index R5112-1.5+ATOX (Table 4b) had control devices TOX and RTO listed for L3-63T-3 and VE-451, respectively, in the revision application. The Control Device Type was OTHER. Based on data for many other units in the updated renewal forms that use these control devices, I changed this type to DIRINC. Please confirm. (Also, for VE-451, Table 4a had R5112-1.5+ARTO while Table 4b had R5112-1.5+ATOX. I used the RTO index in the permit to match the control device ID, but please let me know if you want the TOX index instead.)

      The vent for VE-451 is routed to the RTO only, so only the RTO should be included for the control device for this emission unit and the Control Device Type should be DIRINC. This information was verified as part of the TAPA audit for the facility.

      Unit L3-63T-3 (Caustic Make-up Tank) was added from the 2019 significant revision information; however, it was later confirmed that this tank does not exist. Please remove unit L3-63T-3 from the permit.

      TCEQ Response: L3-63T-3 has been removed from the permit. The flare scenarios have been removed for VE-451, as also requested in WDP comments.

   b. For L3-63T-3, index R5112-1.5+AFLR was missing from Table 4a in the revision application, but it did appear on Table 4b. I used the same Table 4a data as the rest of the index numbers for this unit but let me know if you did not intend to include the flare operating scenario at all.

      Unit L3-63T-3 (Caustic Make-up Tank) was added from the 2019 significant revision information; however, it was later confirmed that this tank does not exist. Please remove unit L3-63T-3 from the permit.

      TCEQ Response: Removed - see above.

   c. VS-118T was missing an answer for Maximum TVP on Table 3 (NSPS Kb). I used the "0.5-0.75" code for now to match the existing data. Please confirm. Also, since the capacity has been updated to "40K+", did you want to revise the SOP index number? It is currently still 60KB-20K-.

      Maximum TVP for VS-118T should be 0.5-0.75. Yes please update the SOP Index number to 60KB-40K+FR.

      TCEQ Response: SOP index number has been updated.

   d. VS-73T had SOP index number R5112-VS67 on Table 4a (Chapter 115) but had R5112-VS62C on Table 4b. I used R5112-VS62C based on the control device, but please confirm.

      The correct SOP Index number is R5112-VS62C.

      TCEQ Response for 9.d-f: Thanks – nothing further is needed.

   e. VS-473 had SOP index number R5112-VS62C-3 on Table 4b for the scenario using flare FL-2 and R5112-VS67-3 for the scenario using flare VS-62C. I corrected those to R5112-FLR2-3 and R5112-VS62C-3 to match Table 4a.

      Yes the SOP Index numbers should match those on Table 4a.

   f. Table 21e (MACT FFFF) uses SOP index number 63FFFF-76-TOX for all units for the incinerator scenario. However, Table 21a uses 63FFFF-76-CD95 for some of these (VS-178T, VS-23T-1, VS-33T, VS-60T, VS-61T, VS-26T, VS-26T-1, VS-28T, VS-28T-1, VS-32T, VS-43T, VE-701, VS-174P). For now, I just used 63FFFF-76-TOX since that seemed to match format from other rules. Please confirm.

      Yes all of the SOP index numbers for the TOX control device should be 63FFFF-76-TOX.

   g. Table 21f (MACT FFFF) was not submitted. This table is needed for all units for the incinerator scenario. I've selected answers for now based on what process vents used on UA-15, but please fill out this table so I can confirm or update the permit.

      The answers from OP-UA15 do apply. A completed OP-UA3 Table 21f is attached to the email response.

      TCEQ Response: Thanks for confirming. No changes were needed for the permit.

10. OP-UA7 Clarifications Needed
    a. Is FL-2 subject to the flare requirements in Chapter 111.111? If so, please submit the Chapter 111 table.

FL-2 is not an acid gas flare and not used for emergency/upset conditions only. A completed OP-UA7 Table 1 is attached to the email response.

TCEQ Response: Requirements have been added to the permit for FL-2 and VS-62C based on updated form.

b. There is a 15-character limit for SOP index numbers, so for flares VS-62C and FL-2, I had to adjust the index numbers for Chapter 115, HRVOC. I just removed the second dash. Let me know if that's acceptable.

Yes that change to the index number is acceptable.

TCEQ Response: Thanks – nothing further needed.

c. FL-2 needs answer for the "Tank Service" question on Table 5b. For now, I selected "No".

The correct answer is "No". It seems that the OP-UA7 form sent on August 14, 2020 had this question marked "No" so I am not sure what happened.

TCEQ Response: That was just my mistake – nothing further needed.

11. Fugitive unit L3-93F-3 has fugitive requirements from Chapter 115, Subchapter H (HRVOC). However, units subject to that portion of the rule must still also comply with Chapter 115, Subchapter D. Please submit Tables 2a-2k, as applicable, of UA-12.

The completed OP-UA12 Tables 2a-2k are attached to the email response. The applicable requirements for unit L3-93F-3 as related to Chapter 115, Subchapter D should be the same as the current applicable requirements for unit VS-93 fugitives.

TCEQ Response: Requirements have been added for L3-93F-3.

12. For COOLTOW and COOLTOW2, Table 2 of UA-13 indicates that the units are using an alternative monitoring/testing method per 115.764(f). Please provide a copy of the approval letter from TCEQ.

It is our understanding that an AMOC request was submitted when the HRVOC rules were first finalized. However, we have not been able to locate the letter in the TCEQ's online file room. Do you have any suggestions of who we should contact at the TCEQ to see if they can locate the letter? If it can't be found, we will resubmit an AMOC request.

TCEQ Response: I was also unable to find any record of it in the online file room. I went through several NSR and Title V application files from past projects to see if it might have been addressed within one of those projects, but I did not see anything. You could contact Anne Inman (anne.inman@tceq.texas.gov), who currently reviews/approves AMOC requests, to see if she has additional recommendations, but I think it is likely that the request will need to be submitted again.

We will contact Anne Inman to see if she has any additional recommendations for the AMOC.

13. For units VE-801 and VS-130P, the MACT FFFF tables of UA-14 have "TBLE35" for Unit Category, but they have "YES" for Process Wastewater. "TBLE35" is for sources subject to the requirements in 63.149 for liquid streams in open systems. The streams subject to 63.149 would otherwise be classified as wastewater due to flowrate/concentration if they had been discarded from the process (see wastewater definition in 63.101), but they are still within the process so are not classified as wastewater. Therefore, "TBLE35" would only be appropriate if Process Wastewater was "No". Please confirm which situation is correct for these units:

a. "TBLE35" is correct for Unit Category. Process Wastewater should be "NO" and Meets 40 CFR 63.149(d) should be "YES".

b. "YES" is correct for Process Wastewater. Unit Category should be "O/WSEP", and Control Requirement should be "COVER". In this situation, an answer would also be needed for Combination of Control Devices.

This is the correct scenario. A revised OP-UA14 is attached to the email response.

TCEQ Response: Permit has been updated based on the corrected attributes.

14. OP-UA15 Clarifications Needed. Also, for any updates affecting units in groups, please do not list all the individual group members on the UA form. Grouped units should use the group ID. This streamlines the form itself as well as the review time and reduces potential for errors.

a. For VE-020 and VE-025, the revision application used index 63FFFF-VE020 and 63FFFF-VE025, respectively, on Table 13a of OP-UA15. Then Table 13b used 63FFFF-ATM for both units. Please confirm which you'd like.

Use the index numbers 63FFFF-VE020 and 63FFFF-VE025.

TCEQ Response: Thanks – no change needed to permit.

b. There is an existing unit MSSVENTS with limited requirements under Chapter 115, Vent Gas Control. I wanted to check – if this just covers additional emissions from other vents during MSS activities, then it should not be listed as a separate unit ID for the Title V permit.
Unit ID MSSVENTS needs to be removed from the permit. Based on further review this was a source that was proposed to be included in the NSR permit in the past, but MSS from these operations are now covered under PBR 106.263.
TCEQ Response: MSSVENTS has been removed from the permit.

c. Some of the units with control requirements for Chapter 115, Vent Gas had index R5127-TOX on Tables 2a-2c. Based on other similar units, I changed to R5121-TOX. This was for units RES-1, RGT-2, TA-004, VS-23T-1, VS-43T, VS-220T-1, VS-220T, VS-28T, VS-28T-1, VS-32T, and RE-101. Please confirm.
Yes that is correct, the index number for units that require control should start with R5121.
TCEQ Response for 14.c-d: Thanks – nothing further needed.

d. Some of the units with exemptions for Chapter 115, Vent Gas had index numbers starting with R5121 on Table 2a. Based on other similar units, I changed this to R5127. This was for units VS-258, VS-68, VS-68-1, VS-72, VS-72-1, VS-34T, and VS-34T-1. Please confirm.
Yes that is correct, the index number for units with exemptions should start with R5127.

e. Chapter 115, Vent Gas tables listed a unit ID VE-451. However, OP-2, OP-SUMR, and OP-REQ2 listed units ID VE-415. I used VE-415 for now, but please confirm.
VE-415 is a typo, should be VE-451.
TCEQ Response: Unit ID has been updated in the permit, as also requested in WDP comments.

f. On Tables 4a-4b, units L1-WBATH, L2-WBATH, and L3-WBATH use one index number, R5121-RTO. However, the Control Device Type and Control Device ID No. on Table 4b was "DIRFLM" and "TOX" for L1-WBATH; "FLARE" and "FL-2" for L2-WBATH; and "FLARE" and "VS-62C" for L3-WBATH. I'm guessing this was a copy/paste error from the other units with three scenarios. For now, I used "DIRFLM" and "RTO" for all three units. Please confirm the correct data.
Yes this was a cut/paste error in the Table 2b. The index number for all should be R5121-RTO and DIRFLM and RTO for Control Device Type and Control Device ID No. are correct for all.
TCEQ Response: Thanks – nothing further is needed.

15. OP-UA15/OP-UA17/OP-UA48 Clarifications Needed. Also, for any updates, please do not list all the individual group members on the UA form. Grouped units should use the group ID. This streamlines the form itself as well as the review time and reduces potential for errors.

a. On UA-48, GRP-RRR has three index numbers (60RRR-8-TOX, 60RRR-8-FL2, and 60RRR-8-VS62C) where the answer to "Subject to Title 40 CFR Part 60, Subpart NNN" is "Yes", yet instead of stopping per the form instructions, the remaining questions on Tables 2a-2c are filled out. Therefore, I just wanted to make sure the answer to this NNN question is correct. If "Yes" is correct, no further data is needed after that point since most of NSPS RRR will not apply. You could also opt to use a single index number instead of three, since the control device usage won't matter. Please confirm data and let me know if you'd like to consolidate these index numbers.
Upon further review it was determined that the vent streams from the reactors are not routed to a distillation unit, but are routed to control. So, the answer to Subject to Title 40 CFR Part 60, Subpart NNN is "No". Therefore, a revised OP-UA48 Form is attached to the email response.
TCEQ Response for 15.a-b: Permit has been updated based on revised attributes.

b. Also, if the "Subject to Title 40 CFR Part 60, Subpart NNN" answer for those three scenarios is correct as "Yes", does GRP-RRR need to have a scenario identified on UA-17 for NSPS NNN? (Or are the NSPS NNN requirements for these vents addressed under different units already?)
As stated in response to Item 15.a, the answer to Subject to Title 40 CFR Part 60, Subpart NNN is "No". Therefore, no NSPS NNN scenario is required on Form OP-UA17 for GRP-RRR.

c. Since GRP-RRR has a scenario on UA-48, index 60RRR-GP3R, where "TRE Index Value" is "8+", shouldn't GRP-RRR also have a corresponding scenario on UA-15 for Chapter 115, Vent Gas where "40 CFR Part 60, Subpart RRR

Requirements" is "Yes"? Right now, the Chapter 115 form only appears to represent all the scenarios where the TRE value is less than 8.0.

As stated in response to Item 15.a, the vent streams from the reactors in GRP-RRR are only directed to control. Because of this index 60RRR-GP3R and the TRE Index Value of 8+ are no longer applicable and should be removed. Therefore, a Chapter 115 scenario where the TRE Index Value is 8+ on OP-UA15 is not required. A revised Form OP-UA48 removing the Index 60RRR-GP3R is attached to the email response.

TCEQ Response: Index 60RRR-GP3R has been removed from the permit.

d. Besides the Chapter 115 and MACT FFFF data on UA-15, GRP-RRRNNN currently has NSPS NNN data on UA-17. Does it also need data on UA-48 for NSPS RRR?

Yes data is provided on the Form OP-UA48 attached to the email response for GRP-RRRNNN.

TCEQ Response: Requirements have been added to the permit.

16. PT-CLEAN will need periodic monitoring for Chapter 115, Degreasing Processes. For now, I have used option PM-V-052 with a deviation limit commonly used by other applicants. Please submit an OP-MON to confirm this is acceptable or propose other monitoring. I have also corrected the SOP index number from R5442-1 to R5412-1, since 115.442 is from different division of the rule.

A completed case-by-case OP-MON for unit PT-CLEAN is attached to the email response.

TCEQ Response: Periodic monitoring has been added to the permit. I had to adjust the deviation limit to meet our 250-character limit, but I kept all the key points. Please let me know if it is acceptable.

Yes I believe the language captures the required items sufficiently.

17. VS-33T and VS-178T will need periodic monitoring for NSPS Kb, as follows.
    a. Index numbers 60KB-FLR2 and 60KB-VS62C will both need monitoring for the closed vent system. For now, I have selected our paired options of PM-V-058 and PM-V-059, with deviation limits commonly used by other applicants. Please submit an OP-MON to confirm this is acceptable or propose other monitoring.

The closed vent systems for these storage tanks are part of the fugitive components in units VS-93, which are already required to be monitored under NSPS Subpart VV. The NSPS Subpart VV applicable requirements are included for units VS-93 in the Working Draft Permit. These fugitive component units are also monitored under the TCEQ 28LAER LDAR program per the requirements of the NSR Permit. Noltex believes these LDAR programs satisfy any applicable monitoring requirements and additional periodic monitoring is not required.

TCEQ Response: Periodic monitoring must be documented for each applicable emission limit. This monitoring will either be in the rule text itself (which NSPS Kb lacks for the closed vent system) or as additional monitoring (in a PM table). Adding a PM table does not necessarily mean that the applicant has to conduct more monitoring in practice than what they may already conduct for other regulations. The same monitoring may be used for multiple rules/emission limits, but it must be listed against each limit in the permit. In other words, whatever is being done needs to be connected to NSPS Kb explicitly, so it is clear that the monitoring requirement is satisfied. In 60.482-10, NSPS VV requires an annual visual inspection of the closed vent system for leaks and also specifies that an instrument reading of 500 ppmv above background constitutes a leak, so I think the options I chose correlate to that. However, if you feel those options are not sufficiently consistent with the monitoring that is already being conducted, you can submit a case-by-case proposal with other wording.

These monitoring options are acceptable, because the site is already conducting these actions based on either NSPS Subpart VV or the TCEQ 28LAER LDAR program.

    b. The rule has adequate monitoring language for flares, but not for other control device types. Index 60KB-VS62C will need monitoring for the control device. For now, I have selected option PM-V-007 with a placeholder deviation limit based on the temperature required by the NSR permit prior to the initial stack test. I see that the NSR permit allows different values based on conditions during later tests, so if you need a different minimum temperature, please let me know the new value. Alternatively, you may propose other monitoring.

OP-MON Forms for Index 60KB-TOX for VS-33T and VS-178T are attached to the email response. The OP-MON forms are case-by-case proposals that match the NSR Permit TOX temperature monitoring requirements, except the monitoring frequency is Once per Week rather than continuous. This way the site is basically already meeting the requirements.

TCEQ Response: The requested periodic monitoring has been added to the permit.

18. In the existing permit, VS-41T had requirements for both Chapter 115, Storage of VOCs and Chapter 115, Vent Gas, which I think was an error. It also had a permit shield for NSPS Kb based on being a process vessel, and our database had a Chapter 115, Storage of VOCs shield for the same reason that had not been granted. Therefore, I've removed the old UA data and requirements for Chapter 115, Storage of VOCs. I granted that permit shield. Please let me know if any further corrections are needed.
    Those changes are correct. The positive and negative applicability for VS-41T should be the same as for unit VS-41T-1.
    TCEQ Response: Thanks – nothing further needed.
19. VS-62C had a shield for Chapter 117 based on the site not being a major source of NOx. Since flares are exempted in any case (117.303(a)(4)), I changed the shield reason to that. That way in the future even if the site becomes major for NOx, the permit shield will still be valid. Let me know if this is acceptable.
    Yes I agree, this is a good idea. Could you also include the same permit shield for FL-2?
    TCEQ Response: Permit shield has been added for FL-2.

20. New units GC3 and L3-72-3 were added to the permit. For GC3, the SOP Index No. was listed as R5127-GC2 on the form. I figured you meant R5127-GC3 so changed it to that (consistent with how GC1 and GC2 were labeled).
    Correct.
21. On the OP-REQ1 that was submitted to correct answers for Item #3 above, I noticed that you had also updated a MACT FFFF answer, question VIII.AA.18. I have removed the term for process wastewater containers from the Special Terms and Conditions.
    Correct.
22. Removed units HE-201, HE-840, TW-250, TW-302, TW-350, TW-701, TW-750, TW-820, TW-821, and VS-220C from GRP-NNN as well as the permit, since units vent through other sources where the requirements are applied.
    Correct.
23. Unit L3-63T-3 removed (also mentioned in Item #9.a).
    Correct.
24. Unit V-415 corrected to V-451 (also mentioned in Item #14.e). For Chapter 115, Vent Gas, operating scenarios R5121-FL2 and R5121-VS62C were removed, and R5121-TOX was changed to R5121-RTO.
    Correct.
25. Removed units VE-502 and VE-503.
    Correct.
26. Changes for unit VS-75T: Chapter 115, Storage of VOC requirements were removed. For Chapter 115, Vent Gas, operating scenarios R5121-FL2 and R5121-VS62C were removed, and R5121-TOX was changed to R5121-RTO.
    Correct.
27. Changes for unit VS-75T-1: For Chapter 115, Vent Gas, operating scenarios R5121-FL2 and R5121-VS62C were removed, and R5121-TOX was changed to R5121-RTO.
    Correct.
28. Changed unit name for VS-23T-1 to VAC STORAGE TANK (also mentioned in Item# 4.a).
    Correct.
29. Removed duplicate listing of VS-75T from NSR Authorizations by Emission Unit table.
    Correct.

FOP O1301 Permit Renewal TCEQ Response (4-8-2021)

Stuart Doss

Follow Up Flag: Follow up
Flag Status: Flagged

Categories: Red Category

Hi Stuart,

Thanks for your response. After looking over everything, I believe the only further change to the WDP is to incorporate the alteration you mentioned for NSR permit 19074. I updated the issuance date to 01/27/2021 (our NSR database and the permit face list this as the issuance date instead of 01/26/2021). Attached is a revised WDP reflecting that change.

Regarding the public notice question, my management has given the go-ahead to proceed with the online notice process. Noltex will need to determine an online location where they will post their application and documents during public notice. You will send me the web address (link) and then we'll put that link in the public notice that Noltex will publish. Once the link becomes active (documents are posted), TCEQ will post the link on our website also.

Please provide the following response by Wednesday, April 14, 2021:

1) Confirm whether any units need to be removed from the Title V permit due to the NSR alteration, since I see that several EPNs were removed.
2) Link for planned web posting of public notice documents and application
3) Provide the OP-CRO1 to certify application submittals from 6/26/2020 until your response. An electronic copy may be submitted to meet the deadline, but please follow up with a hard copy when possible.

Let me know if you have any questions about the public notice process or anything else.

Thanks!
-Carolyn

Subject: RE: Working Draft Permit -- FOP O1301/Project 29817, Noltex, L.L.C., EVOH Copolymer Facility

Carolyn,

We have no additional comments on the revised WDP. I have also attached the most recent "Response to WDP Comments and Unresolved Item Answers" Word document with Noltex responses on all items in the document. I addition, the revised OP-ACPS is attached showing all emission units are in compliance.

Regarding the public notice location, all of the Harris County public library locations are still closed; therefore, Noltex is not aware of a public place that is open to make a copy of the application documents and draft permit physically available. However, we understand that due to the COVID situation causing public places to close that would otherwise be available to maintain copies of documents for public notice, the TCEQ has setup a system to provide for online availability of these documents on the TCEQ website. Please let us know what Noltex needs to do to utilize the TCEQ online system for public notice documents.

Noltex prefers to wait provide a signed OP-CRO1 to certify all information submitted on or after 6/26/2020 until all items are resolved.

Let us know if you have any additional questions or comments.

Thanks,

Stuart

Subject: RE: Working Draft Permit -- FOP O1301/Project 29817, Noltex, L.L.C., EVOH Copolymer Facility

Stuart,

Attached is a revised draft permit implementing the WDP comments as well as changes from your responses to my unresolved item list. Also attached is a document addressing the changes to the draft. The majority of that document

just describes the change or confirms that issues are resolved. Five items in the document (#1-2, 12, and 16-17) require or could potentially require additional information to be submitted.

I will begin preparing the file for public notice. Besides a response to the documents attached, there are two things I need from you all:

1. A public notice location. The applicant listed TCEQ Region 12, but our regional offices are currently closed to the public, and may not be available yet during your notice. Therefore, another location is needed.
2. OP-CRO1 certifying application updates made over the course of the project. The first correspondence I have from you all was the email on 6/26/2020 about the additional changes that were going to be submitted, so I'd recommend using the Time Period option, with a start date of 6/26/2020 and an end date of when you respond. That range should cover the other submittals that have been made. Please note that in the attached document, there are a few items where you may be submitting additional information, so if you would like to wait until those items are resolved, to ensure that only one OP-CRO1 needs to be obtained, that would be acceptable.

Please respond to the revised draft and provide this information by **Monday, April 5, 2021**. If you are including the OP-CRO1 at that time, you can email me a copy to meet the deadline, but please follow up with the original OP-CRO1 in the mail.

Feel free to email with any questions. We can also arrange a phone call or virtual meeting over MS Teams if needed.

Sincerely,

Carolyn Maus, P.E.

Subject: RE: Working Draft Permit -- FOP O1301/Project 29817, Noltex, L.L.C., EVOH Copolymer Facility

Carolyn,

Thanks for all of your hard work preparing the Working Draft Permit. You were correct, it did take awhile to go through the Unresolved Items list and the Working Draft Permit.

Please find attached the following:

1. Working Draft Permit with Noltex comments.
2. Unresolved Items list with Noltex responses.
3. Revised forms as related to responses on the Unresolved Items list and addition of two (2) emission units that were inadvertently left off of the forms submitted for the renewal/revision. Only items that changed on the forms are submitted, with the exception of the entire OP-REQ1 form, as noted in the WDP guidance. The two (2) additional units are:
   a. GC3 – Analyzer Vent
   b. L3-72-3 – Fluidized Bed Dryer Exhaust Air Filter (Line 3)

Regarding submittal of the Certification by Responsible Official (Form OP-CRO1), Noltex prefers to wait to submit this certification for the application updates and the Working Draft Permit until changes from the comments have been completed.

Let us know if you have any additional questions or comments.

Thanks,

Stuart

Subject: Working Draft Permit -- FOP O1301/Project 29817, Noltex, L.L.C., EVOH Copolymer Facility

Hi Stuart,

I have conducted a technical review of the significant revision application and the updated renewal application forms for Noltex, L.L.C, EVOH Copolymer Facility. An electronic copy of the Working Draft Permit (WDP) is attached for your review. This WDP contains the TCEQ determination of applicable requirements based on the information submitted in your application, and any updates provided. My apologies for the extreme delay since receiving your updated materials in August – the updates were much more extensive than I had anticipated. I've also been involved with some internal process improvement initiatives that took away a lot of my application review time.

Please review the WDP and submit to me any comments you have on the working draft permit by **Friday, December 18, 2020**. In addition, please address the questions on the attached Unresolved Items list. Please submit a written response by this deadline, even if you are not making any comments on the content of the WDP. We had originally agreed that Noltex would review the draft in two weeks, but I've tacked on an extra week due to the increased size of the permit and the number of questions I included. We can certainly adjust the timeline further if that's not sufficient.

The third attachment is a draft version of the public notice letter. Since Noltex has agreed to publish notice quickly once we actually send out the public notice package, I wanted to give you an advance copy so that they can begin preparing the signs and making preliminary publication arrangements. The sign format is included in the letter and will not change. The notice itself is also included, but there will still be two updates to it. The Notice Issuance Date at the end will be the date we sent out the letter, which I have marked TBD for now. Second, I'll need another public notice location from Noltex. The application listed TCEQ Region 12, but our regional offices are currently closed to the public, and may not be available yet during your notice. I've marked that spot as TBD in the notice too. The public notice letter is just for planning purposes. We still need to go through the WDP review process before we send out the official notice letter, so do not actually publish anything at this time.

Please review the second portion of the "SOP Technical Review Fact Sheet" located at http://www.tceq.texas.gov/assets/public/permitting/air/Guidance/Title_V/sop_wdp_factsheet.pdf. This guidance contains important information regarding WDP review and comment procedures.

Note that a Certification by Responsible Official (Form OP-CRO1) for any uncertified application information, including application updates supporting the WDP comments, is typically required to be submitted with your response to this email. After final review of the WDP, additional changes supported by application updates may require certification. I will advise you of these changes at a later date. Upon final approval of the Public Notice/Announcement Authorization Package, a duly signed OP-CRO1 form may be required which includes the specific dates or time period of all submitted application documentation that was not previously certified. Therefore, if you wish to wait on submitting the OP-CRO1 until we resolve the WDP comments, that would also be acceptable.

Contact me if you have any questions regarding the guidelines, the project schedule, or any other details regarding your application or permit.

Thank you for your cooperation.

Sincerely,

Carolyn Maus, P.E.

FEDERAL OPERATING PERMIT

A FEDERAL OPERATING PERMIT IS HEREBY ISSUED TO
Noltex, L.L.C

AUTHORIZING THE OPERATION OF
EVOH Copolymer Facility
Plastics Material and Resin Manufacturing

LOCATED AT
Harris County, Texas
Latitude 29° 42′ 4″ Longitude 95° 2′ 32″
Regulated Entity Number: RN101049518

This permit is issued in accordance with and subject to the Texas Clean Air Act (TCAA), Chapter 382 of the Texas Health and Safety Code and Title 30 Texas Administrative Code Chapter 122 (30 TAC Chapter 122), Federal Operating Permits. Under 30 TAC Chapter 122, this permit constitutes the permit holder's authority to operate the site and emission units listed in this permit. Operations of the site and emission units listed in this permit are subject to all additional rules or amended rules and orders of the Commission pursuant to the TCAA.

This permit does not relieve the permit holder from the responsibility of obtaining New Source Review authorization for new, modified, or existing facilities in accordance with 30 TAC Chapter 116, Control of Air Pollution by Permits for New Construction or Modification.

The site and emission units authorized by this permit shall be operated in accordance with 30 TAC Chapter 122, the general terms and conditions, special terms and conditions, and attachments contained herein.

This permit shall expire five years from the date of issuance. The renewal requirements specified in 30 TAC § 122.241 must be satisfied in order to renew the authorization to operate the site and emission units.

Permit No: O1301 Issuance Date: _____

_____
For the Commission

Table of Contents

General Terms and Conditions

The permit holder shall comply with all terms and conditions contained in 30 TAC § 122.143 (General Terms and Conditions), 30 TAC § 122.144 (Recordkeeping Terms and Conditions), 30 TAC § 122.145 (Reporting Terms and Conditions), and 30 TAC § 122.146 (Compliance Certification Terms and Conditions).

In accordance with 30 TAC § 122.144(1), records of required monitoring data and support information required by this permit, or any applicable requirement codified in this permit, are required to be maintained for a period of five years from the date of the monitoring report, sample, or application unless a longer data retention period is specified in an applicable requirement. The five year record retention period supersedes any less stringent retention requirement that may be specified in a condition of a permit identified in the New Source Review Authorization attachment.

If the permit holder chooses to demonstrate that this permit is no longer required, a written request to void this permit shall be submitted to the Texas Commission on Environmental Quality (TCEQ) by the Responsible Official in accordance with 30 TAC § 122.161(e). The permit holder shall comply with the permit's requirements, including compliance certification and deviation reporting, until notified by the TCEQ that this permit is voided.

The permit holder shall comply with 30 TAC Chapter 116 by obtaining a New Source Review authorization prior to new construction or modification of emission units located in the area covered by this permit.

All reports required by this permit must include in the submittal a cover letter which identifies the following information: company name, TCEQ regulated entity number, air account number (if assigned), site name, area name (if applicable), and Air Permits Division permit number(s).

Special Terms and Conditions:

Emission Limitations and Standards, Monitoring and Testing, and Recordkeeping and Reporting

1. Permit holder shall comply with the following requirements:

    A. Emission units (including groups and processes) in the Applicable Requirements Summary attachment shall meet the limitations, standards, equipment specifications, monitoring, recordkeeping, reporting, testing, and other requirements listed in the Applicable Requirements Summary attachment to assure compliance with the permit.

    B. The textual description in the column titled "Textual Description" in the Applicable Requirements Summary attachment is not enforceable and is not deemed as a substitute for the actual regulatory language. The Textual Description is provided for information purposes only.

    C. A citation listed on the Applicable Requirements Summary attachment, which has a notation [G] listed before it, shall include the referenced section and subsection for all commission rules, or paragraphs for all federal and state regulations and all subordinate paragraphs, subparagraphs and clauses, subclauses, and items contained within the referenced citation as applicable requirements.

    D. When a grouped citation, notated with a [G] in the Applicable Requirements Summary, contains multiple compliance options, the permit holder must keep records of when each compliance option was used.

E. Emission units subject to 40 CFR Part 63, Subpart FFFF as identified in the attached Applicable Requirements Summary table are subject to 30 TAC Chapter 113, Subchapter C, § 113.890 which incorporates the 40 CFR Part 63 Subpart by reference.

F. Emission units subject to 40 CFR Part 63, Subpart ZZZZ as identified in the attached Applicable Requirements Summary table are subject to 30 TAC Chapter 113, Subchapter C, §113.1090 which incorporates the 40 CFR Part 63 Subpart by reference.

2. The permit holder shall comply with the following sections of 30 TAC Chapter 101 (General Air Quality Rules):

A. Title 30 TAC § 101.1 (relating to Definitions), insofar as the terms defined in this section are used to define the terms used in other applicable requirements

B. Title 30 TAC § 101.3 (relating to Circumvention)

C. Title 30 TAC § 101.8 (relating to Sampling), if such action has been requested by the TCEQ

D. Title 30 TAC § 101.9 (relating to Sampling Ports), if such action has been requested by the TCEQ

E. Title 30 TAC § 101.10 (relating to Emissions Inventory Requirements)

F. Title 30 TAC § 101.201 (relating to Emission Event Reporting and Recordkeeping Requirements)

G. Title 30 TAC § 101.211 (relating to Scheduled Maintenance, Start-up, and Shutdown Reporting and Recordkeeping Requirements)

H. Title 30 TAC § 101.221 (relating to Operational Requirements)

I. Title 30 TAC § 101.222 (relating to Demonstrations)

J. Title 30 TAC § 101.223 (relating to Actions to Reduce Excessive Emissions)

3. Permit holder shall comply with the following requirements of 30 TAC Chapter 111:

A. Visible emissions from stationary vents with a flow rate of less than 100,000 actual cubic feet per minute and constructed after January 31, 1972 that are not listed in the Applicable Requirements Summary attachment for 30 TAC Chapter 111, Subchapter A, Division 1, shall not exceed 20% opacity averaged over a six-minute period. The permit holder shall comply with the following requirements for stationary vents at the site subject to this standard:

(i) Title 30 TAC § 111.111(a)(1)(B) (relating to Requirements for Specified Sources)

(ii) Title 30 TAC § 111.111(a)(1)(E)

(iii) Title 30 TAC § 111.111(a)(1)(F)(i), (ii), (iii), or (iv)

(iv) For emission units with vent emissions subject to 30 TAC § 111.111(a)(1)(B), complying with 30 TAC § 111.111(a)(1)(F)(ii), (iii), or (iv), and capable of producing visible emissions from, but not limited to, particulate matter, acid gases and NO_x, the permit holder shall also comply with the following periodic

monitoring requirements for the purpose of annual compliance certification under 30 TAC § 122.146. These periodic monitoring requirements do not apply to vents that are not capable of producing visible emissions such as vents that emit only colorless VOCs; vents from non-fuming liquids; vents that provide passive ventilation, such as plumbing vents; or vent emissions from any other source that does not obstruct the transmission of light. Vents, as specified in the "Applicable Requirements Summary" attachment, that are subject to the emission limitation of 30 TAC § 111.111(a)(1)(B) are not subject to the following periodic monitoring requirements:

(1) An observation of stationary vents from emission units in operation shall be conducted at least once during each calendar quarter unless the emission unit is not operating for the entire quarter.

(2) For stationary vents from a combustion source, if an alternative to the normally fired fuel is fired for a period greater than or equal to 24 consecutive hours, the permit holder shall conduct an observation of the stationary vent for each such period to determine if visible emissions are present. If such period is greater than 3 months, observations shall be conducted once during each quarter. Supplementing the normally fired fuel with natural gas or fuel gas to increase the net heating value to the minimum required value does not constitute creation of an alternative fuel.

(3) Records of all observations shall be maintained.

(4) Visible emissions observations of emission units operated during daylight hours shall be conducted no earlier than one hour after sunrise and no later than one hour before sunset. Visible emissions observations of emission units operated only at night must be made with additional lighting and the temporary installation of contrasting backgrounds. Visible emissions observations shall be made during times when the activities described in 30 TAC § 111.111(a)(1)(E) are not taking place. Visible emissions shall be determined with each stationary vent in clear view of the observer. The observer shall be at least 15 feet, but not more than 0.25 mile, away from each stationary vent during the observation. For outdoor locations, the observer shall select a position where the sun is not directly in the observer's eyes. When condensed water vapor is present within the plume, as it emerges from the emissions outlet, observations must be made beyond the point in the plume at which condensed water vapor is no longer visible. When water vapor within the plume condenses and becomes visible at a distance from the emissions outlet, the observation shall be evaluated at the outlet prior to condensation of water vapor. A certified opacity reader is not required for visible emissions observations.

(5) Compliance Certification:

(a) If visible emissions are not present during the observation, the RO may certify that the source is in compliance with the applicable opacity requirement in 30 TAC § 111.111(a)(1) and (a)(1)(B).

(b) However, if visible emissions are present during the observation, the permit holder shall either list this occurrence as a deviation on the next deviation report as required under

30 TAC § 122.145(2) or conduct the appropriate opacity test specified in 30 TAC § 111.111(a)(1)(F) as soon as practicable, but no later than 24 hours after observing visible emissions to determine if the source is in compliance with the opacity requirements. If an opacity test is performed and the source is determined to be in compliance, the RO may certify that the source is in compliance with the applicable opacity requirement. However, if an opacity test is performed and the source is determined to be out of compliance, the permit holder shall list this occurrence as a deviation on the next deviation report as required under 30 TAC § 122.145(2). The opacity test must be performed by a certified opacity reader.

(c) Some vents may be subject to multiple visible emission or monitoring requirements. All credible data must be considered when certifying compliance with this requirement even if the observation or monitoring was performed to demonstrate compliance with a different requirement.

B. For visible emissions from a building, enclosed facility, or other structure; the permit holder shall comply with the following requirements:

(i) Title 30 TAC § 111.111(a)(7)(A) (relating to Requirements for Specified Sources)

(ii) Title 30 TAC § 111.111(a)(7)(B)(i) or (ii)

(iii) For a building containing an air emission source, enclosed facility, or other structure containing or associated with an air emission source subject to 30 TAC § 111.111(a)(7)(A), complying with 30 TAC § 111.111(a)(7)(B)(i) or (ii), and capable of producing visible emissions from, but not limited to, particulate matter, acid gases and NO_x, the permit holder shall also comply with the following periodic monitoring requirements for the purpose of annual compliance certification under 30 TAC § 122.146:

(1) An observation of visible emissions from a building containing an air emission source, enclosed facility, or other structure containing or associated with an air emission source which is required to comply with 30 TAC § 111.111(a)(7)(A) shall be conducted at least once during each calendar quarter unless the air emission source or enclosed facility is not operating for the entire quarter.

(2) Records of all observations shall be maintained.

(3) Visible emissions observations of air emission sources or enclosed facilities operated during daylight hours shall be conducted no earlier than one hour after sunrise and no later than one hour before sunset. Visible emissions observations of air emission sources or enclosed facilities operated only at night must be made with additional lighting and the temporary installation of contrasting backgrounds. Visible emissions shall be determined with each emissions outlet in clear view of the observer. The observer shall be at least 15 feet, but not more than 0.25 mile, away from each emissions outlet during the observation. For outdoor locations, the observer shall select a position where the sun is not directly in the observer's eyes. When condensed water vapor is present within the plume, as it emerges from the emissions outlet, observations must be made beyond the point in the plume at which

condensed water vapor is no longer visible. When water vapor within the plume condenses and becomes visible at a distance from the emissions outlet, the observation shall be evaluated at the outlet prior to condensation of water vapor. A certified opacity reader is not required for visible emissions observations.

(4) Compliance Certification:

(a) If visible emissions are not present during the observation, the RO may certify that the source is in compliance with the applicable opacity requirement in 30 TAC § 111.111(a)(7) and (a)(7)(A).

(b) However, if visible emissions are present during the observation, the permit holder shall either list this occurrence as a deviation on the next deviation report as required under 30 TAC § 122.145(2) or conduct the appropriate opacity test specified in 30 TAC § 111.111(a)(7)(B) as soon as practicable, but no later than 24 hours after observing visible emissions to determine if the source is in compliance with the opacity requirements. If an opacity test is performed and the source is determined to be in compliance, the RO may certify that the source is in compliance with the applicable opacity requirement. However, if an opacity test is performed and the source is determined to be out of compliance, the permit holder shall list this occurrence as a deviation on the next deviation report as required under 30 TAC § 122.145(2). The opacity test must be performed by a certified opacity reader.

C. Certification of opacity readers determining opacities under Method 9 (as outlined in 40 CFR Part 60, Appendix A) to comply with opacity monitoring requirements shall be accomplished by completing the Visible Emissions Evaluators Course, or approved agency equivalent, no more than 180 days before the opacity reading.

D. For emission units with contributions from uncombined water, the permit holder shall comply with the requirements of 30 TAC § 111.111(b).

E. Emission limits on nonagricultural processes, except for the steam generators specified in 30 TAC § 111.153, shall comply with the following requirements:

(i) Emissions of PM from any source may not exceed the allowable rates as required in 30 TAC § 111.151(a) (relating to Allowable Emissions Limits)

(ii) Sources with an effective stack height (h_e) less than the standard effective stack height (H_e), must reduce the allowable emission level by multiplying it by $[h_e/H_e]^2$ as required in 30 TAC § 111.151(b)

(iii) Effective stack height shall be calculated by the equation specified in 30 TAC § 111.151(c)

4. For storage vessels maintaining working pressure as specified in 30 TAC Chapter 115, Subchapter B, Division 1: Storage of Volatile Organic Compounds, the permit holder shall comply with the requirements of 30 TAC § 115.112(e)(1).

5. For industrial wastewater specified in 30 TAC Chapter 115, Subchapter B, the permit holder shall comply with the following requirements:

   A. Title 30 TAC § 115.145 (relating to Approved Test Methods)

   B. Title 30 TAC § 115.146 (relating to Recordkeeping Requirements)

   C. Title 30 TAC § 115.147(1) (relating to Exemptions)

   D. Title 30 TAC § 115.148 (relating to Determination of Wastewater Characteristics)

6. The permit holder shall comply with the following requirements of 30 TAC Chapter 115, Subchapter F, Division 3, Degassing of Storage Tanks, Transport Vessels and Marine Vessels:

   A. For degassing of stationary VOC storage tanks, the permit holder shall comply with the following requirements:

      (i) Title 30 TAC § 115.541(a) - (c) (relating to Emission Specifications)

      (ii) Title 30 TAC § 115.541(f) (relating to Emission Specifications), for floating roof storage tanks

      (iii) Title 30 TAC § 115.542(a) and (a)(1), (a)(2), (a)(3) or (a)(4) (relating to Control Requirements). Where the requirements of 30 TAC Chapter 115, Subchapter F contain multiple compliance options, the permit holder shall keep records of when each compliance option was used.

      (iv) Title 30 TAC § 115.542(b) - (d), (relating to Control Requirements)

      (v) Title 30 TAC § 115.543 (relating to Alternate Control Requirements)

      (vi) Title 30 TAC § 115.544(a)(1) and (a)(2) (relating to Inspection, Monitoring, and Testing Requirements), for inspections

      (vii) Title 30 TAC § 115.544(b) (relating to Inspection, Monitoring, and Testing Requirements), for monitoring

      (viii) Title 30 TAC § 115.544(b)(1) and (b)(2) (relating to Inspection, Monitoring, and Testing Requirements), for monitoring of control devices

      (ix) Title 30 TAC § 115.544(b)(2)(A) - (J) (relating to Inspection, Monitoring, and Testing Requirements), for monitoring (as appropriate to the control device)

      (x) Title 30 TAC § 115.544(b)(3), (b)(4) and (b)(6) (relating to Inspection, Monitoring, and Testing Requirements), for VOC concentration or lower explosive limit threshold monitoring

      (xi) Title 30 TAC § 115.544(c), and (c)(1) - (c)(3) (relating to Inspection, Monitoring, and Testing Requirements), for testing of control devices used to comply with 30 TAC § 115.542(a)(1)

      (xii) Title 30 TAC § 115.545(1) - (7), (9) - (11) and (13) (relating to Approved Test Methods)

(xiii) Title 30 TAC § 115.546(a), (a)(1) and (a)(3) (relating to Recordkeeping and Notification Requirements), for recordkeeping

(xiv) Title 30 TAC § 115.546(a)(2) and (a)(2)(A) - (J) (relating to Recordkeeping and Notification Requirements), for recordkeeping (as appropriate to the control device)

(xv) Title 30 TAC § 115.546(a)(4) (relating to Recordkeeping and Notification Requirements), for recordkeeping of testing of control devices used to comply with 30 TAC § 115.542(a)(1)

(xvi) Title 30 TAC § 115.546(b) (relating to Recordkeeping and Notification Requirements), for notification

(xvii) Title 30 TAC § 115.547(4) (relating to Exemptions)

7. The permit holder shall comply with the requirements of 30 TAC § 115.722(b) (relating to Site-wide Cap and Control Requirements) and the requirements of 30 TAC § 115.726(g) (relating to Recordkeeping and Reporting Requirements).

8. The permit holder shall comply with the requirements of 30 TAC § 115.761(b) (relating to Site-wide Cap) and the requirements of 30 TAC § 115.766(g) (relating to Recordkeeping and Reporting Requirements).

9. The permit holder shall comply with the following requirements of 30 TAC Chapter 117:

A. For boilers, process heaters, stationary reciprocating engines, and turbines (including duct burners) exempt from Subchapter D, Division 1 at minor sources of NO_x under 30 TAC § 117.2003(a), the permit holder shall comply with 30 TAC §§ 117.2030(c), 117.2035(g), 117.2045(b) and 117.2045(c).

10. The permit holder shall comply with the following requirements for units subject to any subpart of 40 CFR Part 60, unless otherwise stated in the applicable subpart:

A. Title 40 CFR § 60.7 (relating to Notification and Recordkeeping)

B. Title 40 CFR § 60.8 (relating to Performance Tests)

C. Title 40 CFR § 60.11 (relating to Compliance with Standards and Maintenance Requirements)

D. Title 40 CFR § 60.12 (relating to Circumvention)

E. Title 40 CFR § 60.13 (relating to Monitoring Requirements)

F. Title 40 CFR § 60.14 (relating to Modification)

G. Title 40 CFR § 60.15 (relating to Reconstruction)

H. Title 40 CFR § 60.19 (relating to General Notification and Reporting Requirements)

11. The permit holder shall comply with the requirements of 30 TAC Chapter 113, Subchapter C, § 113.100 for units subject to any subpart of 40 CFR Part 63, unless otherwise stated in the applicable subpart.

12. For miscellaneous chemical process facilities subject to maintenance wastewater requirements as specified in 40 CFR § 63.2485, Table 7, the permit holder shall comply with the requirements of 40 CFR § 63.105 (relating to Maintenance Wastewater Requirements) (Title 30 TAC Chapter 113, Subchapter C, § 113.890 incorporated by reference).

13. For miscellaneous chemical process facilities with Group 2 wastewater streams subject to wastewater operations requirements in 40 CFR Part 63, Subpart FFFF, the permit holder shall comply with the requirements of 40 CFR § 63.132(a), (a)(1), (a)(1)(i), and (a)(3) as specified in § 63.2485(a) (Title 30 TAC Chapter 113, Subchapter C, § 113.890 incorporated by reference).

14. The permit holder shall comply with certified registrations submitted to the TCEQ for purposes of establishing federally enforceable emission limits. A copy of the certified registration shall be maintained with the permit. Records sufficient to demonstrate compliance with the established limits shall be maintained. The certified registration and records demonstrating compliance shall be provided, on request, to representatives of the appropriate TCEQ regional office and any local air pollution control agency having jurisdiction over the site. The permit holder shall submit updated certified registrations when changes at the site require establishment of new emission limits. If changes result in emissions that do not remain below major source thresholds, the permit holder shall submit a revision application to codify the appropriate requirements in the permit.

Additional Monitoring Requirements

15. The permit holder shall comply with the periodic monitoring requirements as specified in the attached "Periodic Monitoring Summary" upon issuance of the permit. Except for, as applicable, monitoring malfunctions, associated repairs, and required quality assurance or control activities (including, as applicable, calibration checks and required zero and span adjustments), the permit holder shall conduct all monitoring in continuous operation (or shall collect data at all required intervals) at all times that the pollutant-specific emissions unit is operating. The permit holder may elect to collect monitoring data on a more frequent basis and average the data, consistent with the averaging time or minimum frequency specified in the "Periodic Monitoring Summary," for purposes of determining whether a deviation has occurred. However, the additional data points must be collected on a regular basis. In no event shall data be collected and used in particular instances to avoid reporting deviations. Deviations shall be reported according to 30 TAC § 122.145 (Reporting Terms and Conditions).

New Source Review Authorization Requirements

16. Permit holder shall comply with the requirements of New Source Review authorizations issued or claimed by the permit holder for the permitted area, including permits, permits by rule (including the permits by rule identified in the PBR Supplemental Tables in the application), standard permits, flexible permits, special permits, permits for existing facilities including Voluntary Emissions Reduction Permits and Electric Generating Facility Permits issued under 30 TAC Chapter 116, Subchapter I, or special exemptions referenced in the New Source Review Authorization References attachment. These requirements:

    A. Are incorporated by reference into this permit as applicable requirements

    B. Shall be located with this operating permit

    C. Are not eligible for a permit shield

17. The permit holder shall comply with the general requirements of 30 TAC Chapter 106, Subchapter A or the general requirements, if any, in effect at the time of the claim of any PBR.

18. The permit holder shall maintain records to demonstrate compliance with any emission limitation or standard that is specified in a permit by rule (PBR) or Standard Permit listed in the New Source Review Authorizations attachment. The records shall yield reliable data from the relevant time period that are representative of the emission unit's compliance with the PBR or Standard Permit. These records may include, but are not limited to, production capacity and throughput, hours of operation, safety data sheets (SDS), chemical composition of raw materials, speciation of air contaminant data, engineering calculations, maintenance records, fugitive data, performance tests, capture/control device efficiencies, direct pollutant monitoring (CEMS, COMS, or PEMS), or control device parametric monitoring. These records shall be made readily accessible and available as required by 30 TAC § 122.144. Any monitoring or recordkeeping data indicating noncompliance with the PBR or Standard Permit shall be considered and reported as a deviation according to 30 TAC § 122.145 (Reporting Terms and Conditions).

Compliance Requirements

19. The permit holder shall certify compliance in accordance with 30 TAC § 122.146. The permit holder shall comply with 30 TAC § 122.146 using at a minimum, but not limited to, the continuous or intermittent compliance method data from monitoring, recordkeeping, reporting, or testing required by the permit and any other credible evidence or information. The certification period may not exceed 12 months and the certification must be submitted within 30 days after the end of the period being certified.

20. Use of Emission Credits to comply with applicable requirements:

    A. Unless otherwise prohibited, the permit holder may use emission credits to comply with the following applicable requirements listed elsewhere in this permit:

        (i) Title 30 TAC Chapter 115

        (ii) Title 30 TAC Chapter 117

        (iii) Offsets for Title 30 TAC Chapter 116

    B. The permit holder shall comply with the following requirements in order to use the emission credits to comply with the applicable requirements:

        (i) The permit holder must notify the TCEQ according to 30 TAC § 101.306(c)-(d)

        (ii) The emission credits to be used must meet all the geographic, timeliness, applicable pollutant type, and availability requirements listed in 30 TAC Chapter 101, Subchapter H, Division 1

        (iii) The executive director has approved the use of the credit according to 30 TAC § 101.306(c)-(d)

        (iv) The permit holder keeps records of the use of credits towards compliance with the applicable requirements in accordance with 30 TAC § 101.302(g) and 30 TAC Chapter 122

        (v) Title 30 TAC § 101.305 (relating to Emission Reductions Achieved Outside the United States)

21. Use of Discrete Emission Credits to comply with the applicable requirements:

A. Unless otherwise prohibited, the permit holder may use discrete emission credits to comply with the following applicable requirements listed elsewhere in this permit:

(i) Title 30 TAC Chapter 115

(ii) Title 30 TAC Chapter 117

(iii) If applicable, offsets for Title 30 TAC Chapter 116

(iv) Temporarily exceed state NSR permit allowables

B. The permit holder shall comply with the following requirements in order to use the credit to comply with the applicable requirements:

(i) The permit holder must notify the TCEQ according to 30 TAC § 101.376(d)

(ii) The discrete emission credits to be used must meet all the geographic, timeliness, applicable pollutant type, and availability requirements listed in 30 TAC Chapter 101, Subchapter H, Division 4

(iii) The executive director has approved the use of the discrete emission credits according to 30 TAC § 101.376(d)(1)(A)

(iv) The permit holder keeps records of the use of credits towards compliance with the applicable requirements in accordance with 30 TAC § 101.372(h) and 30 TAC Chapter 122

(v) Title 30 TAC § 101.375 (relating to Emission Reductions Achieved Outside the United States)

Risk Management Plan

22. For processes subject to 40 CFR Part 68 and specified in 40 CFR § 68.10, the permit holder shall comply with the requirements of the Accidental Release Prevention Provisions in 40 CFR Part 68. The permit holder shall submit to the appropriate agency either a compliance schedule for meeting the requirements of 40 CFR Part 68 by the date provided in 40 CFR § 68.10(a), or as part of the compliance certification submitted under this permit, a certification statement that the source is in compliance with all requirements of 40 CFR Part 68, including the registration and submission of a risk management plan.

Protection of Stratospheric Ozone

23. Permit holders at a site subject to Title VI of the FCAA Amendments shall meet the following requirements for protection of stratospheric ozone:

A. Any on site servicing, maintenance, and repair on refrigeration and nonmotor vehicle air-conditioning appliances using ozone-depleting refrigerants or non-exempt substitutes shall be conducted in accordance with 40 CFR Part 82, Subpart F. Permit holders shall ensure that repairs on or refrigerant removal from refrigeration and nonmotor vehicle air-conditioning appliances using ozone-depleting refrigerants are performed only by properly certified technicians using certified equipment. Records shall be maintained as required by 40 CFR Part 82, Subpart F.

Permit Location

24. The permit holder shall maintain a copy of this permit and records related to requirements listed in this permit on site.

Permit Shield (30 TAC § 122.148)

25. A permit shield is granted for the emission units, groups, or processes specified in the attached "Permit Shield." Compliance with the conditions of the permit shall be deemed compliance with the specified potentially applicable requirements or specified potentially applicable state-only requirements listed in the attachment "Permit Shield." Permit shield provisions shall not be modified by the executive director until notification is provided to the permit holder. No later than 90 days after notification of a change in a determination made by the executive director, the permit holder shall apply for the appropriate permit revision to reflect the new determination. Provisional terms are not eligible for this permit shield. Any term or condition, under a permit shield, shall not be protected by the permit shield if it is replaced by a provisional term or condition or the basis of the term and condition changes.

Applicable Requirements Summary

Note: A “none” entry may be noted for some emission sources in this permit’s “Applicable Requirements Summary” under the heading of “Monitoring and Testing Requirements” and/or “Recordkeeping Requirements” and/or “Reporting Requirements.” Such a notation indicates that there are no requirements for the indicated emission source as identified under the respective column heading(s) for the stated portion of the regulation when the emission source is operating under the conditions of the specified SOP Index Number. However, other relevant requirements pursuant to 30 TAC Chapter 122 including Recordkeeping Terms and Conditions (30 TAC § 122.144), Reporting Terms and Conditions (30 TAC § 122.145), and Compliance Certification Terms and Conditions (30 TAC § 122.146) continue to apply.

Unit Summary

Unit/Group/ Process ID No.	Unit Type	Group/Inclusive Units	SOP Index No.	Regulation	Requirement Driver
					used for pressure relief devices in heavy or light liquid service., Complying with 40 CFR § 60.482-8 = Pressure relief devices in heavy or light liquid service are complying with the requirements of § 60.482-8., 2.0% = The fugitive unit is not complying with an allowable percentage of valves leaking equal to or less than 2.0%., Valves in Heavy Liquid Service = The fugitive unit contains valves in heavy liquid service., Vapor Recovery System = The fugitive unit does not contain vapor recovery systems., Enclosed Combustion Device = The fugitive unit contains enclosed combustion devices., Flare = The fugitive unit contains flares., Equivalent Emission Limitation = No equivalent emission limitation is used for pumps in light liquid service., Equivalent Emission Limitation = No equivalent emission limitation is used for pumps in heavy liquid service., Equivalent Emission Limitation = No equivalent emission limitation is used for compressors., Equivalent Emission Limitation = No equivalent emission limitation is used for sampling connection systems., Equivalent Emission Limitation = No equivalent emission limitation is used for open-ended valves or lines., Equivalent Emission

Unit Summary

Unit/Group/ Process ID No.	Unit Type	Group/Inclusive Units	SOP Index No.	Regulation	Requirement Driver
					Limitation = No equivalent emission limitation is used for valves in gas/vapor or light liquid service., Equivalent Emission Limitation = No equivalent emission limitation is used for valves in heavy liquid service., Equivalent Emission Limitation = No equivalent emission limitation is used for flanges and other connectors., Equivalent Emission Limitation = No equivalent emission limitation is used for enclosed combustion devices., Equivalent Emission Limitation = No equivalent emission limitation is used for flares., Vacuum Service = The fugitive unit does not contain equipment in vacuum serv
VS-93	FUGITIVE EMISSION UNITS	N/A	60VV-300-	40 CFR Part 60, Subpart VV	Vacuum Service = The fugitive unit does not contain equipment in vacuum service., VOC Service = Fugitive unit contains equipment designed to operate in VOC service less than 300 hours per year.
VS-93	FUGITIVE EMISSION UNITS	N/A	60VV-VACU	40 CFR Part 60, Subpart VV	Vacuum Service = The fugitive unit contains equipment in vacuum service.
VS-93	FUGITIVE EMISSION UNITS	N/A	63FFFF	40 CFR Part 63, Subpart FFFF	No changing attributes.

Additional Monitoring Requirements

Periodic Monitoring Summary

Unit/Group/Process Information	
ID No.: PT-CLEAN	
Control Device ID No.: N/A	Control Device Type: N/A
Applicable Regulatory Requirement	
Name: 30 TAC Chapter 115, Degreasing Processes	SOP Index No.: R5412-1
Pollutant: VOC	Main Standard: § 115.412(1)
Monitoring Information	
Indicator: Visual Inspection	
Minimum Frequency: Monthly	
Averaging Period: N/A	
Deviation Limit: Inspection not conducted. No cover, or cover open when unit not in use. Device not properly labeled. Waste solvent not stored in closed container, or parts not drained for at least 15 seconds, or porous or absorbent materials degreased in unit.	
Periodic Monitoring Text: Inspect equipment and record data monthly to ensure compliance with § 115.412(1)(A), (C), and (F). Any monitoring data which indicates that the cold cleaner is not in compliance with the applicable requirements of § 115.412(1)(A), (C), or (F) shall be considered and reported as a deviation.	

Periodic Monitoring Summary

Unit/Group/Process Information	
ID No.: VS-178T	
Control Device ID No.: FL-2	Control Device Type: Flare
Applicable Regulatory Requirement	
Name: 40 CFR Part 60, Subpart Kb	SOP Index No.: 60KB-FLR2
Pollutant: VOC	Main Standard: [G]§ 60.112b(a)(3)
Monitoring Information	
Indicator: VOC Concentration	
Minimum Frequency: Once per year	
Averaging Period: N/A	
Deviation Limit: VOC concentration > 500 ppmv.	
Periodic Monitoring Text: Measure and record fugitive emissions from the vapor collection system in accordance with part 60, appendix A, method 21.	

Periodic Monitoring Summary

Unit/Group/Process Information	
ID No.: VS-178T	
Control Device ID No.: FL-2	Control Device Type: Flare
Applicable Regulatory Requirement	
Name: 40 CFR Part 60, Subpart Kb	SOP Index No.: 60KB-FLR2
Pollutant: VOC	Main Standard: [G]§ 60.112b(a)(3)
Monitoring Information	
Indicator: Visual Inspection	
Minimum Frequency: Once per year	
Averaging Period: N/A	
Deviation Limit: Inspections not conducted, or defects discovered and not repaired.	
Periodic Monitoring Text: Visually inspect all components of the vapor collection system for defects, such as cracks, holes, gaps, loose connections, or broken or missing covers or other closure devices, that could result in air emissions.	

Periodic Monitoring Summary

Unit/Group/Process Information	
ID No.: VS-178T	
Control Device ID No.: TOX	Control Device Type: Thermal incinerator (direct flame incinerator/regenerative thermal oxidizer)
Applicable Regulatory Requirement	
Name: 40 CFR Part 60, Subpart Kb	SOP Index No.: 60KB-TOX
Pollutant: VOC	Main Standard: [G]§ 60.112b(a)(3)
Monitoring Information	
Indicator: Firebox Temperature	
Minimum Frequency: Once per week	
Averaging Period: N/A	
Deviation Limit: Minimum firebox temperature of 1,800 degrees F.	
Periodic Monitoring Text: Monitor and record the firebox temperature in the thermal oxidizer. The temperature measurement device shall be installed, calibrated and maintained according to accepted practice and the manufacturer's specifications. Any monitoring data below the minimum limit shall be considered and reported as a deviation.	

Periodic Monitoring Summary

Unit/Group/Process Information	
ID No.: VS-178T	
Control Device ID No.: TOX	Control Device Type: Thermal incinerator (direct flame incinerator/regenerative thermal oxidizer)
Applicable Regulatory Requirement

Control Device ID No.: FL-2	Control Device Type: Flare
Applicable Regulatory Requirement	
Name: 40 CFR Part 60, Subpart Kb	SOP Index No.: 60KB-FLR2
Pollutant: VOC	Main Standard: [G]§ 60.112b(a)(3)
Monitoring Information	
Indicator: VOC Concentration	
Minimum Frequency: Once per year	
Averaging Period: N/A	
Deviation Limit: VOC concentration > 500 ppmv.	
Periodic Monitoring Text: Measure and record fugitive emissions from the vapor collection system in accordance with part 60, appendix A, method 21.	

Periodic Monitoring Summary

Unit/Group/Process Information	
ID No.: VS-33T	
Control Device ID No.: FL-2	Control Device Type: Flare
Applicable Regulatory Requirement	
Name: 40 CFR Part 60, Subpart Kb	SOP Index No.: 60KB-FLR2
Pollutant: VOC	Main Standard: [G]§ 60.112b(a)(3)
Monitoring Information	
Indicator: Visual Inspection	
Minimum Frequency: Once per year	
Averaging Period: N/A	
Deviation Limit: Inspections not conducted, or defects discovered and not repaired.	
Periodic Monitoring Text: Visually inspect all components of the vapor collection system for defects, such as cracks, holes, gaps, loose connections, or broken or missing covers or other closure devices, that could result in air emissions.	

Periodic Monitoring Summary

Unit/Group/Process Information	
ID No.: VS-33T	
Control Device ID No.: TOX	Control Device Type: Thermal incinerator (direct flame incinerator/regenerative thermal oxidizer)
Applicable Regulatory Requirement	
Name: 40 CFR Part 60, Subpart Kb	SOP Index No.: 60KB-TOX
Pollutant: VOC	Main Standard: [G]§ 60.112b(a)(3)
Monitoring Information	
Indicator: Firebox Temperature	
Minimum Frequency: Once per week	
Averaging Period: N/A	
Deviation Limit: Minimum firebox temperature of 1,800 degrees F.	
Periodic Monitoring Text: Monitor and record the firebox temperature in the thermal oxidizer. The temperature measurement device shall be installed, calibrated, and maintained according to accepted practice and the manufacturer's specifications. Any monitoring data below the minimum limit shall be considered and reported as a deviation.

Permit Shield

Permit Shield

The Executive Director of the TCEQ has determined that the permit holder is not required to comply with the specific regulation(s) identified for each emission unit, group, or process in this table.

Unit / Group / Process ID No.	Group / Inclusive Units	Regulation	Basis of Determination
AKMU-P	N/A	30 TAC Chapter 115, Storage of VOCs	Vessel is less than 1,000 gallons capacity.
AKMU-P	N/A	40 CFR Part 60, Subpart Kb	Vessel is less than 75 cubic meters capacity.
AKMU-TK1	N/A	30 TAC Chapter 115, Storage of VOCs	Vessel is less than 1,000 gallons capacity.
AKMU-TK1	N/A	40 CFR Part 60, Subpart Kb	Vessel is less than 75 cubic meters capacity.
AKMU-TK2	N/A	30 TAC Chapter 115, Storage of VOCs	Vessel is less than 1,000 gallons capacity.
AKMU-TK2	N/A	40 CFR Part 60, Subpart Kb	Vessel is less than 75 cubic meters capacity.
BLCH-TK	N/A	30 TAC Chapter 115, Storage of VOCs	Vessel does not store volatile organic liquid.
BLCH-TK	N/A	40 CFR Part 60, Subpart Kb	Vessel does not store volatile organic liquid.
CAUS-1	N/A	30 TAC Chapter 115, Storage of VOCs	Vessel does not store volatile organic liquid.
CAUS-1	N/A	40 CFR Part 60, Subpart Kb	Vessel does not store volatile organic liquid.
CL5898	N/A	30 TAC Chapter 115, Storage of VOCs	Vessel is less than 1,000 gallons capacity.
CL5898	N/A	40 CFR Part 60, Subpart Kb	Vessel is less than 75 cubic meters capacity.
COOLTOW	N/A	40 CFR Part 63, Subpart Q	Chromium is not used in the cooling water.
COOLTOW2	N/A	40 CFR Part 63, Subpart Q	Chromium is not used in the cooling water.
EMGEN	N/A	40 CFR Part 60, Subpart IIII	Engine manufactured before July 11, 2005.
EMGEN	N/A	40 CFR Part 63, Subpart ZZZZ	Existing emergency stationary RICE with > 500 brake HP at a major source of HAPs and does not operate/is not contractually obligated to be available for > 15 hours per calendar year for the purposes specified later in rule text.
FL-2	N/A	30 TAC Chapter 117, Subchapter B	Flares are exempted from the regulation.
FUEL-2	N/A	30 TAC Chapter 115, Storage of VOCs	Vessel is less than 1,000 gallons capacity.

Permit Shield

The Executive Director of the TCEQ has determined that the permit holder is not required to comply with the specific regulation(s) identified for each emission unit, group, or process in this table.

Unit / Group / Process ID No.	Group / Inclusive Units	Regulation	Basis of Determination
FUEL-2	N/A	40 CFR Part 60, Subpart Kb	Vessel is less than 75 cubic meters capacity.
H2SO4	N/A	40 CFR Part 60, Subpart Kb	Tank capacity is less than 75 cubic meters.
HE-470	N/A	30 TAC Chapter 115, Storage of VOCs	Process vessel and not a storage vessel.
HE-470	N/A	40 CFR Part 60, Subpart Kb	Process vessel and not a storage vessel.
HE-471	N/A	30 TAC Chapter 115, Storage of VOCs	Process vessel and not a storage vessel.
HE-471	N/A	40 CFR Part 60, Subpart Kb	Process vessel and not a storage vessel.
L1_2-POLY	N/A	30 TAC Chapter 115, Storage of VOCs	Vessel is less than 1,000 gallons capacity.
L1_2-POLY	N/A	40 CFR Part 60, Subpart Kb	Vessel is less than 75 cubic meters capacity.
L3-152	N/A	30 TAC Chapter 115, Storage of VOCs	Vessel does not store volatile organic liquid.
L3-152	N/A	40 CFR Part 60, Subpart Kb	Vessel does not store volatile organic liquid.
L3-260	N/A	30 TAC Chapter 115, Storage of VOCs	Vessel is less than 1,000 gallons capacity.
L3-260	N/A	40 CFR Part 60, Subpart Kb	Vessel is less than 75 cubic meters capacity.
L3-26T-3	N/A	30 TAC Chapter 115, Storage of VOCs	Process vessel and not a storage vessel.
L3-26T-3	N/A	40 CFR Part 60, Subpart Kb	Process vessel and not a storage vessel.
L3-28T-3	N/A	30 TAC Chapter 115, Storage of VOCs	Process vessel and not a storage vessel.
L3-28T-3	N/A	40 CFR Part 60, Subpart Kb	Process vessel and not a storage vessel.
L3-37T-3	N/A	30 TAC Chapter 115, Storage of VOCs	Process vessel and not a storage vessel.
L3-37T-3	N/A	40 CFR Part 60, Subpart Kb	Process vessel and not a storage vessel.
L3-45T-3	N/A	30 TAC Chapter 115, Storage of VOCs	Process vessel and not a storage vessel.
L3-45T-3	N/A	40 CFR Part 60, Subpart Kb	Process vessel and not a storage vessel.
L3-78-3	N/A	30 TAC Chapter 115, Storage of VOCs	Process vessel and not a storage vessel.

Permit Shield

The Executive Director of the TCEQ has determined that the permit holder is not required to comply with the specific regulation(s) identified for each emission unit, group, or process in this table.

Unit / Group / Process ID No.	Group / Inclusive Units	Regulation	Basis of Determination
L3-78-3	N/A	40 CFR Part 60, Subpart Kb	Process vessel and not a storage vessel.
L3-AF	N/A	30 TAC Chapter 115, Storage of VOCs	Vessel is less than 1,000 gallons capacity.
L3-AF	N/A	40 CFR Part 60, Subpart Kb	Vessel is less than 75 cubic meters capacity.
L3-BLEACH	N/A	30 TAC Chapter 115, Storage of VOCs	Vessel is less than 1,000 gallons capacity.
L3-BLEACH	N/A	40 CFR Part 60, Subpart Kb	Vessel is less than 75 cubic meters capacity.
L3-CL5898	N/A	30 TAC Chapter 115, Storage of VOCs	Vessel is less than 1,000 gallons capacity.
L3-CL5898	N/A	40 CFR Part 60, Subpart Kb	Vessel is less than 75 cubic meters capacity.
L3-POLY	N/A	30 TAC Chapter 115, Storage of VOCs	Vessel is less than 1,000 gallons capacity.
L3-POLY	N/A	40 CFR Part 60, Subpart Kb	Vessel is less than 75 cubic meters capacity.
NEUT-1	N/A	40 CFR Part 60, Subpart Kb	Storage vessel is greater than 75 cubic meters and less than 151 cubic meters storing volatile organic liquid with vapor pressure less than 15.0 kPa.
SPT-AF	N/A	30 TAC Chapter 115, Storage of VOCs	Vessel is less than 1,000 gallons capacity.
SPT-AF	N/A	40 CFR Part 60, Subpart Kb	Vessel is less than 75 cubic meters capacity.
SPT-DIS	N/A	30 TAC Chapter 115, Storage of VOCs	Vessel is less than 1,000 gallons capacity.
SPT-DIS	N/A	40 CFR Part 60, Subpart Kb	Vessel is less than 75 cubic meters capacity.
SURCT	N/A	30 TAC Chapter 115, Surface Coating Operations	Surface coating of fixed immovable structures not included in the list of surface coating processes in 115.420(a).
SURCT	N/A	40 CFR Part 63, Subpart MMMM	Surface coating operations that occur due to facility maintenance operations.
TA-004	N/A	30 TAC Chapter 115, Storage of VOCs	Process vessel and not a storage vessel.

Permit Shield

The Executive Director of the TCEQ has determined that the permit holder is not required to comply with the specific regulation(s) identified for each emission unit, group, or process in this table.

Unit / Group / Process ID No.	Group / Inclusive Units	Regulation	Basis of Determination
TA-004	N/A	40 CFR Part 60, Subpart Kb	Process vessel and not a storage vessel.
TTANK	N/A	30 TAC Chapter 115, Storage of VOCs	Storage tank has a storage capacity less than 1,000 gallons.
TTANK	N/A	40 CFR Part 60, Subpart Kb	Tank capacity is less than 75 cubic meters.
VE-020	N/A	30 TAC Chapter 115, Storage of VOCs	Process vessel and not a storage vessel.
VE-020	N/A	40 CFR Part 60, Subpart Kb	Process vessel and not a storage vessel.
VE-025	N/A	30 TAC Chapter 115, Storage of VOCs	Process vessel and not a storage vessel.
VE-025	N/A	40 CFR Part 60, Subpart Kb	Process vessel and not a storage vessel.
VE-030	N/A	30 TAC Chapter 115, Storage of VOCs	Vessel is less than 1,000 gallons capacity.
VE-030	N/A	40 CFR Part 60, Subpart Kb	Vessel is less than 75 cubic meters capacity.
VE-101	N/A	30 TAC Chapter 115, Storage of VOCs	Process vessel and not a storage vessel.
VE-101	N/A	40 CFR Part 60, Subpart Kb	Process vessel and not a storage vessel.
VE-102	N/A	30 TAC Chapter 115, Storage of VOCs	Process vessel and not a storage vessel.
VE-102	N/A	40 CFR Part 60, Subpart Kb	Process vessel and not a storage vessel.
VE-170	N/A	30 TAC Chapter 115, Storage of VOCs	Process vessel and not a storage vessel.
VE-170	N/A	40 CFR Part 60, Subpart Kb	Process vessel and not a storage vessel.
VE-171	N/A	30 TAC Chapter 115, Storage of VOCs	Process vessel and not a storage vessel.
VE-171	N/A	40 CFR Part 60, Subpart Kb	Process vessel and not a storage vessel.
VE-350	N/A	30 TAC Chapter 115, Storage of VOCs	Process vessel and not a storage vessel.
VE-350	N/A	40 CFR Part 60, Subpart Kb	Process vessel and not a storage vessel.
VE-401	N/A	30 TAC Chapter 115, Storage of VOCs	Process vessel and not a storage vessel.

Permit Shield

The Executive Director of the TCEQ has determined that the permit holder is not required to comply with the specific regulation(s) identified for each emission unit, group, or process in this table.

Unit / Group / Process ID No.	Group / Inclusive Units	Regulation	Basis of Determination
VE-401	N/A	40 CFR Part 60, Subpart Kb	Process vessel and not a storage vessel.
VE-450	N/A	30 TAC Chapter 115, Storage of VOCs	Process vessel and not a storage vessel.
VE-450	N/A	40 CFR Part 60, Subpart Kb	Process vessel and not a storage vessel.
VE-451	N/A	30 TAC Chapter 115, Storage of VOCs	Process vessel and not a storage vessel.
VE-451	N/A	40 CFR Part 60, Subpart Kb	Process vessel and not a storage vessel.
VE-471	N/A	30 TAC Chapter 115, Storage of VOCs	Process vessel and not a storage vessel.
VE-471	N/A	40 CFR Part 60, Subpart Kb	Process vessel and not a storage vessel.
VE-472	N/A	40 CFR Part 60, Subpart Kb	Vessel is less than 75 cubic meters capacity.
VE-701	N/A	30 TAC Chapter 115, Storage of VOCs	Process vessel and not a storage vessel.
VE-701	N/A	40 CFR Part 60, Subpart Kb	Process vessel and not a storage vessel.
VE-902	N/A	30 TAC Chapter 115, Storage of VOCs	Process vessel and not a storage vessel.
VE-902	N/A	40 CFR Part 60, Subpart Kb	Process vessel and not a storage vessel.
VE-911	N/A	30 TAC Chapter 115, Storage of VOCs	Process vessel and not a storage vessel.
VE-911	N/A	40 CFR Part 60, Subpart Kb	Process vessel and not a storage vessel.
VS-112	N/A	30 TAC Chapter 115, Vent Gas Controls	Vent gas stream is a combustion unit exhaust stream from a unit which is not being used as a control device for any vent gas stream subject to this division and originating from a non-combustion source.
VS-118T	N/A	40 CFR Part 60, Subpart Kb	The vessel contains a volatile organic liquid with a maximum true vapor pressure less than 0.5 psia (3.5 kPa).
VS-127T	N/A	30 TAC Chapter 115, Storage of VOCs	Process vessel and not a storage vessel.

Permit Shield

The Executive Director of the TCEQ has determined that the permit holder is not required to comply with the specific regulation(s) identified for each emission unit, group, or process in this table.

Unit / Group / Process ID No.	Group / Inclusive Units	Regulation	Basis of Determination
VS-127T	N/A	40 CFR Part 60, Subpart Kb	Process vessel and not a storage vessel.
VS-131T	N/A	30 TAC Chapter 115, Storage of VOCs	Process vessel and not a storage vessel.
VS-131T	N/A	40 CFR Part 60, Subpart Kb	Process vessel and not a storage vessel.
VS-174P	N/A	30 TAC Chapter 115, Storage of VOCs	Process vessel and not a storage vessel.
VS-174P	N/A	40 CFR Part 60, Subpart Kb	Process vessel and not a storage vessel.
VS-210T	N/A	30 TAC Chapter 115, Storage of VOCs	Process vessel and not a storage vessel.
VS-210T	N/A	40 CFR Part 60, Subpart Kb	Process vessel and not a storage vessel.
VS-210T-1	N/A	30 TAC Chapter 115, Storage of VOCs	Process vessel and not a storage vessel.
VS-210T-1	N/A	40 CFR Part 60, Subpart Kb	Process vessel and not a storage vessel.
VS-23T	N/A	40 CFR Part 60, Subpart Kb	Tank capacity is less than 75 cubic meters.
VS-23T-1	N/A	30 TAC Chapter 115, Storage of VOCs	Process vessel and not a storage vessel.
VS-23T-1	N/A	40 CFR Part 60, Subpart Kb	Process vessel and not a storage vessel.
VS-24T	N/A	30 TAC Chapter 115, Storage of VOCs	Process vessel and not a storage vessel.
VS-24T	N/A	40 CFR Part 60, Subpart Kb	Tank is defined as a process vessel according §60.111b.
VS-24T-1	N/A	30 TAC Chapter 115, Storage of VOCs	Process vessel and not a storage vessel.
VS-24T-1	N/A	40 CFR Part 60, Subpart Kb	Process vessel and not a storage vessel.
VS-255T	N/A	30 TAC Chapter 115, Storage of VOCs	Tank capacity is less than 1000 gallons
VS-255T	N/A	40 CFR Part 60, Subpart Kb	Tank Capacity is less than 75 cubic meters
VS-259T	N/A	30 TAC Chapter 115, Storage of VOCs	Vessel is less than 1,000 gallons capacity.
VS-259T	N/A	40 CFR Part 60, Subpart Kb	Vessel is less than 75 cubic meters capacity.

Permit Shield

The Executive Director of the TCEQ has determined that the permit holder is not required to comply with the specific regulation(s) identified for each emission unit, group, or process in this table.

Unit / Group / Process ID No.	Group / Inclusive Units	Regulation	Basis of Determination
VS-262T	N/A	30 TAC Chapter 115, Storage of VOCs	Process vessel and not a storage vessel.
VS-262T	N/A	40 CFR Part 60, Subpart Kb	Process vessel and not a storage vessel.
VS-263T	N/A	40 CFR Part 60, Subpart Kb	Tank capacity is less than 75 cubic meters.
VS-264T	N/A	40 CFR Part 60, Subpart Kb	Material stored is not a volatile organic liquid.
VS-26T	N/A	30 TAC Chapter 115, Storage of VOCs	Process vessel and not a storage vessel.
VS-26T	N/A	40 CFR Part 60, Subpart Kb	Process vessel and not a storage vessel.
VS-26T-1	N/A	30 TAC Chapter 115, Storage of VOCs	Process vessel and not a storage vessel.
VS-26T-1	N/A	40 CFR Part 60, Subpart Kb	Process vessel and not a storage vessel.

VS-54T	N/A	40 CFR Part 60, Subpart Kb	Process vessel and not a storage vessel.
VS-54T-1	N/A	30 TAC Chapter 115, Storage of VOCs	Process vessel and not a storage vessel.
VS-54T-1	N/A	40 CFR Part 60, Subpart Kb	Process vessel and not a storage vessel.
VS-55T	N/A	30 TAC Chapter 115, Storage of VOCs	Process vessel and not a storage vessel.
VS-55T	N/A	40 CFR Part 60, Subpart Kb	Process vessel and not a storage vessel.
VS-56T	N/A	30 TAC Chapter 115, Storage of VOCs	Process vessel and not a storage vessel.
VS-56T	N/A	40 CFR Part 60, Subpart Kb	Process vessel and not a storage vessel.
VS-59T-1	N/A	30 TAC Chapter 115, Storage of VOCs	Tank capacity is less than 1,000 gallons.
VS-59T-1	N/A	40 CFR Part 60, Subpart Kb	Tank capacity is less than 75 cubic meters.
VS-60T	N/A	40 CFR Part 60, Subpart Kb	Tank capacity is less than 75 cubic meters.
VS-61T	N/A	40 CFR Part 60, Subpart Kb	Tank capacity is less than 75 cubic meters.
VS-62C	N/A	30 TAC Chapter 117, Subchapter B	Flares are exempted from the regulation.
VS-62T	N/A	30 TAC Chapter 115, Storage of VOCs	Process vessel and not a storage vessel.
VS-62T	N/A	40 CFR Part 60, Subpart Kb	Process vessel and not a storage vessel.
VS-63T	N/A	40 CFR Part 60, Subpart Kb	Tank capacity is less than 75 cubic meters.
VS-64T	N/A	30 TAC Chapter 115, Storage of VOCs	Process vessel and not a storage vessel.
VS-64T	N/A	40 CFR Part 60, Subpart Kb	Process vessel and not a storage vessel.
VS-66T	N/A	30 TAC Chapter 115, Storage of VOCs	Process vessel and not a storage vessel.
VS-66T	N/A	40 CFR Part 60, Subpart Kb	Process vessel and not a storage vessel.
VS-71	N/A	30 TAC Chapter 115, Vent Gas Controls	Vent gas stream is a combustion unit exhaust

Permit Shield

The Executive Director of the TCEQ has determined that the permit holder is not required to comply with the specific regulation(s) identified for each emission unit, group, or process in this table.

Unit / Group / Process ID No.	Group / Inclusive Units	Regulation	Basis of Determination
			stream from a unit which is not being used as a control device for any vent gas stream subject to this Division and originates from a non-combustion source.
VS-71T	N/A	30 TAC Chapter 115, Storage of VOCs	Process vessel and not a storage vessel.
VS-71T	N/A	40 CFR Part 60, Subpart Kb	Tank is defined as a process vessel according §60.111b.
VS-71T-1	N/A	30 TAC Chapter 115, Storage of VOCs	Process vessel and not a storage vessel.
VS-71T-1	N/A	40 CFR Part 60, Subpart Kb	Tank is defined as a process vessel according §60.111b.
VS-73	N/A	30 TAC Chapter 115, Vent Gas Controls	Vent gas stream is a combustion unit exhaust stream from a unit which is not being used as a control device for any vent gas stream subject to this Division and originates from a non-combustion source.
VS-73T	N/A	40 CFR Part 60, Subpart Kb	Vessel is less than 75 cubic meters capacity.
VS-74T	N/A	30 TAC Chapter 115, Storage of VOCs	Process vessel and not a storage vessel.
VS-74T	N/A	40 CFR Part 60, Subpart Kb	Process vessel and not a storage vessel.
VS-74T-1	N/A	30 TAC Chapter 115, Storage of VOCs	Process vessel and not a storage vessel.
VS-74T-1	N/A	40 CFR Part 60, Subpart Kb	Process vessel and not a storage vessel.
VS-75T	N/A	30 TAC Chapter 115, Storage of VOCs	Process vessel and not a storage vessel.
VS-75T	N/A	40 CFR Part 60, Subpart Kb	Process vessel and not a storage vessel.
VS-75T-1	N/A	30 TAC Chapter 115, Storage of VOCs	Process vessel and not a storage vessel.
VS-75T-1	N/A	40 CFR Part 60, Subpart Kb	Process vessel and not a storage vessel.

Permit Shield

The Executive Director of the TCEQ has determined that the permit holder is not required to comply with the specific regulation(s) identified for each emission unit, group, or process in this table.

Unit / Group / Process ID No.	Group / Inclusive Units	Regulation	Basis of Determination
VS-76T	N/A	30 TAC Chapter 115, Storage of VOCs	Process vessel and not a storage vessel.
VS-76T	N/A	40 CFR Part 60, Subpart Kb	Process vessel and not a storage vessel.

VS-91T	N/A	30 TAC Chapter 115, Storage of VOCs	Tank capacity is less than 1,000 gallons.
VS-91T	N/A	40 CFR Part 60, Subpart Kb	Tank capacity is less than 75 cubic meters.

New Source Review Authorization References

New Source Review Authorization References

The New Source Review authorizations listed in the table below are applicable requirements under 30 TAC Chapter 122 and enforceable under this operating permit.

Title 30 TAC Chapter 116 Permits, Special Permits, and Other Authorizations (Other Than Permits By Rule, PSD Permits, or NA Permits) for the Application Area.	
Authorization No.: 19074	Issuance Date: 01/27/2021
Permits By Rule (30 TAC Chapter 106) for the Application Area	
Number: 106.261	Version No./Date: 11/01/2003
Number: 106.262	Version No./Date: 11/01/2003
Number: 106.263	Version No./Date: 11/01/2001
Number: 106.373	Version No./Date: 09/04/2000
Number: 106.454	Version No./Date: 11/01/2001
Number: 106.472	Version No./Date: 09/04/2000

New Source Review Authorization References by Emissions Unit

The following is a list of New Source Review (NSR) authorizations for emission units listed elsewhere in this operating permit. The NSR authorizations are applicable requirements under 30 TAC Chapter 122 and enforceable under this operating permit.

Unit/Group/Process ID No.	Emission Unit Name/Description	New Source Review Authorization**
AKMU-P	ADDITIVE K MAKE-UP POT	19074
AKMU-TK1	ADDITIVE K MAKE-UP TANK	19074
AKMU-TK2	ADDITIVE K MAKE-UP TANK	19074
BLCH-TK	BLEACH TANK	106.472/09/04/2000
CAUS-1	AQUEOUS CAUSTIC SOLUTION TANK	106.472/09/04/2000
CL5898	DISPERSANT SOLUTION TOTE	106.472/09/04/2000
COOLTOW	COOLING TOWER	19074
COOLTOW2	COOLING TOWER 2 (LINE 3)	19074
EMGEN	EMERGENCY GENERATOR	19074
EMGEN2	EMERGENCY GENERATOR 2	19074
FL-2	EVOH FLARE	19074
FUEL-2	DIESEL TANK FOR AUXILIARY EQUIPMENT	106.472/09/04/2000
GC1	ANALYZER VENT	19074
GC2	ANALYZER VENT	19074
GC3	ANALYZER VENT	19074
H2SO4	SULFURIC ACID STORAGE TANK	19074
HE-252	RAC COLUMN O/H CONDENSER (LINE 3)	19074
HE-301	ALCOHOLYSIS O/H CONDENSER (LINE 3)	19074
HE-350	FLASHER O/H CONDENSER (LINE 3)	19074
HE-470	#1 FLUSH SOLUTION TANK (LINE 3)	19074
HE-471	#2 FLUSH SOLUTION TANK (LINE 3)	19074

New Source Review Authorization References by Emissions Unit

The following is a list of New Source Review (NSR) authorizations for emission units listed elsewhere in this operating permit. The NSR authorizations are applicable requirements under 30 TAC Chapter 122 and enforceable under this operating permit.

Unit/Group/Process ID No.	Emission Unit Name/Description	New Source Review Authorization**
HE-703	MEAC COLUMN CONDENSER (LINE 3)	19074
HE-751	MEOH COLUMN O/H CONDENSER (LINE 3)	19074
HE-802	WED COLUMN O/H CONDENSER (LINE 3)	19074
HE-821	LIGHT END COLUMN O/H CONDENSER (LINE 3)	19074
HE-841	FLASH VAC CONDENSER (LINE 3)	19074

Appendix A

Acronym List

The following abbreviations or acronyms may be used in this permit:

ACFM ..... actual cubic feet per minute
AMOC ..... alternate means of control
ARP ..... Acid Rain Program
ASTM ..... American Society of Testing and Materials
B/PA ..... Beaumont/Port Arthur (nonattainment area)
CAM ..... Compliance Assurance Monitoring
CD ..... control device
CEMS ..... continuous emissions monitoring system
CFR ..... Code of Federal Regulations
COMS ..... continuous opacity monitoring system
CVS ..... closed vent system
D/FW ..... Dallas/Fort Worth (nonattainment area)
EP ..... emission point
EPA ..... U.S. Environmental Protection Agency
EU ..... emission unit
FCAA Amendments ..... Federal Clean Air Act Amendments
FOP ..... federal operating permit
gr/100 scf ..... grains per 100 standard cubic feet
HAP ..... hazardous air pollutant
H/G/B ..... Houston/Galveston/Brazoria (nonattainment area)
H_2S ..... hydrogen sulfide
ID No. ..... identification number
lb/hr ..... pound(s) per hour
MACT ..... Maximum Achievable Control Technology (40 CFR Part 63)
MMBtu/hr ..... Million British thermal units per hour
NA ..... nonattainment
N/A ..... not applicable
NADB ..... National Allowance Data Base
NESHAP ..... National Emission Standards for Hazardous Air Pollutants (40 CFR Part 61)

Attachments: OP-CRO1 signed.pdf

Follow Up Flag: Follow up
Flag Status: Flagged

Categories: Red Category

Carolyn,

Noltex has no additional comments on the WDP. The emission units removed from the NSR permit were removed from the Title V WDP in the last round of changes to the draft. A PDF of the signed OP-CRO1 form is attached and a hardcopy will be sent to your attention at the TCEQ Austin office. The hyperlink for the public notice documents is as follows: https://spiritenv.com/wp-content/uploads/2021/04/Noltex_2021_Public_Notice.pdf This assumes that all public notice documents will be provided to Noltex before the end of April, such that the public notice PDF can be compiled before the end of April. If public notice documents are not expected until May, the hyperlink will be: https://spiritenv.com/wp-content/uploads/2021/05/Noltex_2021_Public_Notice.pdf

The hyperlink will be active once the draft permit and statement of basis have been finalized and provided to Noltex and prior to publication of notice in the newspaper.

Let us know if you have any additional questions.

Thanks,

Stuart

Subject: RE: Working Draft Permit -- FOP O1301/Project 29817, Noltex, L.L.C., EVOH Copolymer Facility

Hi Stuart,

Thanks for your response. After looking over everything, I believe the only further change to the WDP is to incorporate the alteration you mentioned for NSR permit 19074. I updated the issuance date to 01/27/2021 (our NSR database and the permit face list this as the issuance date instead of 01/26/2021). Attached is a revised WDP reflecting that change.

Regarding the public notice question, my management has given the go-ahead to proceed with the online notice process. Noltex will need to determine an online location where they will post their application and documents during public notice. You will send me the web address (link) and then we'll put that link in the public notice that Noltex will publish. Once the link becomes active (documents are posted), TCEQ will post the link on our website also.

Please provide the following response by Wednesday, April 14, 2021:

1) Confirm whether any units need to be removed from the Title V permit due to the NSR alteration, since I see that several EPNs were removed.
2) Link for planned web posting of public notice documents and application
3) Provide the OP-CRO1 to certify application submittals from 6/26/2020 until your response. An electronic copy may be submitted to meet the deadline, but please follow up with a hard copy when possible.

Let me know if you have any questions about the public notice process or anything else.

Thanks!
-Carolyn

Subject: RE: Working Draft Permit -- FOP O1301/Project 29817, Noltex, L.L.C., EVOH Copolymer Facility

Carolyn,

We have no additional comments on the revised WDP. I have also attached the most recent "Response to WDP Comments and Unresolved Item Answers" Word document with Noltex responses on all items in the document. I addition, the revised OP-ACPS is attached showing all emission units are in compliance.

Regarding the public notice location, all of the Harris County public library locations are still closed; therefore, Noltex is not aware of a public place that is open to make a copy of the application documents and draft permit physically available. However, we understand that due to the COVID situation causing public places to close that would otherwise be available to maintain copies of documents for public notice, the TCEQ has setup a system to provide for online availability of these documents on the TCEQ website. Please let us know what Noltex needs to do to utilize the TCEQ online system for public notice documents.

Noltex prefers to wait provide a signed OP-CRO1 to certify all information submitted on or after 6/26/2020 until all items are resolved.

Let us know if you have any additional questions or comments.

Thanks,

Stuart

Subject: RE: Working Draft Permit -- FOP O1301/Project 29817, Noltex, L.L.C., EVOH Copolymer Facility

Stuart,

Attached is a revised draft permit implementing the WDP comments as well as changes from your responses to my unresolved item list. Also attached is a document addressing the changes to the draft. The majority of that document just describes the change or confirms that issues are resolved. Five items in the document (#1-2, 12, and 16-17) require or could potentially require additional information to be submitted.

I will begin preparing the file for public notice. Besides a response to the documents attached, there are two things I need from you all:

1. A public notice location. The applicant listed TCEQ Region 12, but our regional offices are currently closed to the public, and may not be available yet during your notice. Therefore, another location is needed.
2. OP-CRO1 certifying application updates made over the course of the project. The first correspondence I have from you all was the email on 6/26/2020 about the additional changes that were going to be submitted, so I'd recommend using the Time Period option, with a start date of 6/26/2020 and an end date of when you respond. That range should cover the other submittals that have been made. Please note that in the attached document, there are a few items where you may be submitting additional information, so if you would like to

wait until those items are resolved, to ensure that only one OP-CRO1 needs to be obtained, that would be acceptable.

Please respond to the revised draft and provide this information by **Monday, April 5, 2021**. If you are including the OP-CRO1 at that time, you can email me a copy to meet the deadline, but please follow up with the original OP-CRO1 in the mail.

Feel free to email with any questions. We can also arrange a phone call or virtual meeting over MS Teams if needed.

Sincerely,

Carolyn Maus, P.E.

Thanks, Stuart! I will be going through your response and revising the WDP as needed. If I need anything further to resolve any of the items, I will let you know.

I'll be taking some vacation time over the next two weeks so I will dive into this when I return on January 4.

Carolyn,

Thanks for all of your hard work preparing the Working Draft Permit. You were correct, it did take awhile to go through the Unresolved Items list and the Working Draft Permit.

Please find attached the following:

1. Working Draft Permit with Noltex comments.
2. Unresolved Items list with Noltex responses.
3. Revised forms as related to responses on the Unresolved Items list and addition of two (2) emission units that were inadvertently left off of the forms submitted for the renewal/revision. Only items that changed on the forms are submitted, with the exception of the entire OP-REQ1 form, as noted in the WDP guidance. The two (2) additional units are:
   a. GC3 – Analyzer Vent
   b. L3-72-3 – Fluidized Bed Dryer Exhaust Air Filter (Line 3)

Regarding submittal of the Certification by Responsible Official (Form OP-CRO1), Noltex prefers to wait to submit this certification for the application updates and the Working Draft Permit until changes from the comments have been completed.

Let us know if you have any additional questions or comments.

Thanks,

Stuart

Subject: Working Draft Permit -- FOP O1301/Project 29817, Noltex, L.L.C., EVOH Copolymer Facility

Hi Stuart,

I have conducted a technical review of the significant revision application and the updated renewal application forms for Noltex, L.L.C, EVOH Copolymer Facility. An electronic copy of the Working Draft Permit (WDP) is attached for your

review. This WDP contains the TCEQ determination of applicable requirements based on the information submitted in your application, and any updates provided. My apologies for the extreme delay since receiving your updated materials in August – the updates were much more extensive than I had anticipated. I've also been involved with some internal process improvement initiatives that took away a lot of my application review time.

Please review the WDP and submit to me any comments you have on the working draft permit by **Friday, December 18, 2020**. In addition, please address the questions on the attached Unresolved Items list. Please submit a written response by this deadline, even if you are not making any comments on the content of the WDP. We had originally agreed that Noltex would review the draft in two weeks, but I've tacked on an extra week due to the increased size of the permit and the number of questions I included. We can certainly adjust the timeline further if that's not sufficient.

The third attachment is a draft version of the public notice letter. Since Noltex has agreed to publish notice quickly once we actually send out the public notice package, I wanted to give you an advance copy so that they can begin preparing the signs and making preliminary publication arrangements. The sign format is included in the letter and will not change. The notice itself is also included, but there will still be two updates to it. The Notice Issuance Date at the end will be the date we sent out the letter, which I have marked TBD for now. Second, I'll need another public notice location from Noltex. The application listed TCEQ Region 12, but our regional offices are currently closed to the public, and may not be available yet during your notice. I've marked that spot as TBD in the notice too. The public notice letter is just for planning purposes. We still need to go through the WDP review process before we send out the official notice letter, so do not actually publish anything at this time.

Please review the second portion of the "SOP Technical Review Fact Sheet" located at http://www.tceq.texas.gov/assets/public/permitting/air/Guidance/Title_V/sop_wdp_factsheet.pdf. This guidance contains important information regarding WDP review and comment procedures.

Note that a Certification by Responsible Official (Form OP-CRO1) for any uncertified application information, including application updates supporting the WDP comments, is typically required to be submitted with your response to this email. After final review of the WDP, additional changes supported by application updates may require certification. I will advise you of these changes at a later date. Upon final approval of the Public Notice/Announcement Authorization Package, a duly signed OP-CRO1 form may be required which includes the specific dates or time period of all submitted application documentation that was not previously certified. Therefore, if you wish to wait on submitting the OP-CRO1 until we resolve the WDP comments, that would also be acceptable.

Contact me if you have any questions regarding the guidelines, the project schedule, or any other details regarding your application or permit.

Thank you for your cooperation.

Sincerely,

Carolyn Maus, P.E.

Form OP-CRO1
Certification by Responsible Official
Federal Operating Permit Program

All initial permit application, revision, renewal, and reopening submittals requiring certification must be addressed using this form. Updates to site operating permit (SOP) and temporary operating permit (TOP) applications, other than public notice verification materials, must be certified prior to authorization of public notice or start of public announcement. Updates to general operating permit (GOP) applications must be certified prior to receiving an authorization to operate under a GOP.

I. Identifying Information		
RN: 101049518	CN: 604039271	Account No.: HG-7698-G
Permit No.: O1301	Project No.: 29817	
Area Name: EVOH Copolymer Facility	Company Name: Noltex LLC	

II. Certification Type *(Please mark the appropriate box)*

☒ Responsible Official ☐ Duly Authorized Representative

III. Submittal Type *(Please mark the appropriate box) (Only one response can be accepted per form)*

☐ SOP/TOP Initial Permit Application ☒ Update to Permit Application

☐ GOP Initial Permit Application ☐ Permit Revision, Renewal, or Reopening

☐ Other: _____

IV. Certification of Truth

This certification does not extend to information which is designated by the TCEQ as information for reference only.

I, Brian Kinkopf certify that I am the RO
(Certifier Name printed or typed) *(RO or DAR)*

and that, based on information and belief formed after reasonable inquiry, the statements and information dated during the time period or on the specific date(s) below, are true, accurate, and complete:

Note: Enter Either a Time Period OR Specific Date(s) for each certification. This section must be completed. The certification is not valid without documentation date(s).

Title: President

Statement of Basis of the Federal Operating Permit

Noltex, L.L.C

Site Name: EVOH Copolymer Facility
Physical Location: 12220 Strang Rd
Nearest City: La Porte
County: Harris

Permit Number: O1301
Project Type: Renewal

The North American Industry Classification System (NAICS) Code: 325211
NAICS Name: Plastics Material and Resin Manufacturing

This Statement of Basis sets forth the legal and factual basis for the draft permit conditions in accordance with 30 TAC §122.201(a)(4). Per 30 TAC §§ 122.241 and 243, the permit holder has submitted an application under § 122.134 for permit renewal. This document may include the following information:

A description of the facility/area process description;
A basis for applying permit shields;
A list of the federal regulatory applicability determinations;
A table listing the determination of applicable requirements;
A list of the New Source Review Requirements;
The rationale for periodic monitoring methods selected;
The rationale for compliance assurance methods selected;
A compliance status; and
A list of available unit attribute forms.

Prepared on: April 30, 2021

Operating Permit
Basis of Determination

Permit Area Process Description

Noltex produces ethylene vinyl alcohol (EVOH) co-polymer. The polymer is currently manufactured in three process lines, referred to as Lines 1, 2, and 3. The process consists of polymer synthesis; monomer removal/recovery; solvent removal/recovery; and pellet formation, drying, and packaging. A solution of EVOH and methanol is produced and then precipitated/extruded into strands, which are then cut into pellets and transferred through the process using water. The pellets are separated from the water using a sieve into a column where the methanol is removed. Pellets are then dried and packaged into bags or boxes. Untreated monomer and solvents are distilled for purity and are reused in the process to minimize waste. Emissions from Lines 1-3 are currently controlled using a thermal oxidizer and flares. Wastewater generated by the production process is temporarily stored onsite and then discharged to an offsite wastewater treatment facility via pipeline.

FOPs at Site

The "application area" consists of the emission units and that portion of the site included in the application and this permit. Multiple FOPs may be issued to a site in accordance with 30 TAC § 122.201(e). When there is only one area for the site, then the application information and permit will include all units at the site. Additional FOPs that exist at the site, if any, are listed below.

Additional FOPs: None

Major Source Pollutants

The table below specifies the pollutants for which the site is a major source:

Major Pollutants	HAPS

Reading State of Texas's Federal Operating Permit

The Title V Federal Operating Permit (FOP) lists all state and federal air emission regulations and New Source Review (NSR) authorizations (collectively known as "applicable requirements") that apply at a particular site or permit area (in the event a site has multiple FOPs). **The FOP does not authorize new emissions or new construction activities.** The FOP begins with an introductory page which is common to all Title V permits. This page gives the details of the company, states the authority of the issuing agency, requires the company to operate in accordance with this permit and 30 Texas Administrative Code (TAC) Chapter 122, requires adherence with NSR requirements of 30 TAC Chapter 116, and finally indicates the permit number and the issuance date.

This is followed by the table of contents, which is generally composed of the following elements. Not all permits will have all of the elements.

- General Terms and Conditions
- Special Terms and Conditions
    - Emissions Limitations and Standards, Monitoring and Testing, and Recordkeeping and Reporting
    - Additional Monitoring Requirements
    - New Source Review Authorization Requirements
    - Compliance Requirements
    - Protection of Stratosphere Ozone
    - Permit Location
    - Permit Shield (30 TAC § 122.148)

- Attachments
    - Applicable Requirements Summary
        - Unit Summary
        - Applicable Requirements Summary
    - Additional Monitoring Requirements
    - Permit Shield
    - New Source Review Authorization References
    - Compliance Plan
    - Alternative Requirements
- Appendix A
    - Acronym list

General Terms and Conditions

The General Terms and Conditions are the same and appear in all permits. The first paragraph lists the specific citations for 30 TAC Chapter 122 requirements that apply to all Title V permit holders. The second paragraph describes the requirements for record retention. The third paragraph provides details for voiding the permit, if applicable. The fourth paragraph states that the permit holder shall comply with the requirements of 30 TAC Chapter 116 by obtaining a New Source Review authorization prior to new construction or modification of emission units located in the area covered by this permit. The fifth paragraph provides details on submission of reports required by the permit.

Special Terms and Conditions

Emissions Limitations and Standards, Monitoring and Testing, and Recordkeeping and Reporting. The TCEQ has designated certain applicable requirements as site-wide requirements. A site-wide requirement is a requirement that applies uniformly to all the units or activities at the site. Units with only site-wide requirements are addressed on Form OP-REQ1 and are not required to be listed separately on an OP-UA Form or Form OP-SUM. Form OP-SUM must list all units addressed in the application and provide identifying information, applicable OP-UA Forms, and preconstruction authorizations. The various OP-UA Forms provide the characteristics of each unit from which applicable requirements are established. Some exceptions exist as a few units may have both site-wide requirements and unit specific requirements.

Other conditions. The other entries under special terms and conditions are in general terms referring to compliance with the more detailed data listed in the attachments.

Attachments

Applicable Requirements Summary. The first attachment, the Applicable Requirements Summary, has two tables, addressing unit specific requirements. The first table, the Unit Summary, includes a list of units with applicable requirements, the unit type, the applicable regulation, and the requirement driver. The intent of the requirement driver is to inform the reader that a given unit may have several different operating scenarios and the differences between those operating scenarios.

The applicable requirements summary table provides the detailed citations of the rules that apply to the various units. For each unit and operating scenario, there is an added modifier called the “index number,” detailed citations specifying monitoring and testing requirements, recordkeeping requirements, and reporting requirements. The data for this table is based on data supplied by the applicant on the OP-SUM and various OP-UA forms.

Additional Monitoring Requirement. The next attachment includes additional monitoring the applicant must perform to ensure compliance with the applicable standard. Compliance assurance monitoring (CAM) is often required to provide a reasonable assurance of compliance with applicable emission limitations/standards for large emission units that use control devices to achieve compliance with applicant requirements. When necessary, periodic monitoring (PM) requirements are specified for certain parameters (i.e. feed rates, flow rates, temperature, fuel type and consumption, etc.) to determine if a term and condition or emission unit is operating within specified limits to control emissions. These additional monitoring approaches may be required for two reasons. First, the applicable rules do not adequately specify monitoring requirements (exception- Maximum Achievable Control Technology Standards (MACTs) generally have sufficient monitoring), and second, monitoring may be required to fill gaps in the monitoring requirements of certain

applicable requirements. In situations where the NSR permit is the applicable requirement requiring extra monitoring for a specific emission unit, the preferred solution is to have the monitoring requirements in the NSR permit updated so that all NSR requirements are consolidated in the NSR permit.

Permit Shield. A permit may or may not have a permit shield, depending on whether an applicant has applied for, and justified the granting of, a permit shield. A permit shield is a special condition included in the permit document stating that compliance with the conditions of the permit shall be deemed compliance with the specified potentially applicable requirement(s) or specified applicable state-only requirement(s).

New Source Review Authorization References. All activities which are related to emissions in the state of Texas must have a NSR authorization prior to beginning construction. This section lists all units in the permit and the NSR authorization that allowed the unit to be constructed or modified. Units that do not have unit specific applicable requirements other than the NSR authorization do not need to be listed in this attachment. While NSR permits are not physically a part of the Title V permit, they are legally incorporated into the Title V permit by reference. Those NSR permits whose emissions exceed certain PSD/NA thresholds must also undergo a Federal review of federally regulated pollutants in addition to review for state regulated pollutants.

Compliance Plan. A permit may have a compliance schedule attachment for listing corrective actions plans for any emission unit that is out of compliance with an applicable requirement.

Alternative Requirements. This attachment will list any alternative monitoring plans or alternative means of compliance for applicable requirements that have been approved by the EPA Administrator and/or the TCEQ Executive Director.

Appendix A

Acronym list. This attachment lists the common acronyms used when discussing the FOPs.

Stationary vents subject to 30 TAC Chapter 111, Subchapter A, § 111.111(a)(1)(B) addressed in the Special Terms and Conditions

The site contains stationary vents with a flowrate less than 100,000 actual cubic feet per minute (acfm) and constructed after January 31, 1972 which are limited, over a six-minute average, to 20% opacity as required by 30 TAC § 111.111(a)(1)(B). As a site may have a large number of stationary vents that fall into this category, they are not required to be listed individually in the permit's Applicable Requirement Summary. This is consistent with EPA's White Paper for Streamlined Development of Part 70 Permit Applications, July 10, 1995, that states that requirements that apply identically to emission units at a site can be treated on a generic basis such as source-wide opacity limits.

Periodic monitoring is specified in Special Term and Condition 3 for stationary vents subject to 30 TAC § 111.111(a)(1)(B) to verify compliance with the 20% opacity limit. These vents are not expected to produce visible emissions during normal operation. The TCEQ evaluated the probability of these sources violating the opacity standards and determined that there is a very low potential that an opacity standard would be exceeded. It was determined that continuous monitoring for these sources is not warranted as there would be very limited environmental benefit in continuously monitoring sources that have a low potential to produce visible emissions. Therefore, the TCEQ set the visible observation monitoring frequency for these sources to once per calendar quarter.

The TCEQ has exempted vents that are not capable of producing visible emissions from periodic monitoring requirements. These vents include sources of colorless VOCs, non-fuming liquids, and other materials that cannot produce emissions that obstruct the transmission of light. Passive ventilation vents, such as plumbing vents, are also included in this category. Since this category of vents are not capable of producing opacity due to the physical or chemical characteristics of the emission source, periodic monitoring is not required as it would not yield any additional data to assure compliance with the 20% opacity standard of 30 TAC § 111.111(a)(1)(B).

In the event that visible emissions are detected, either through the quarterly observation or other credible evidence, such as observations from company personnel, the permit holder shall either report a deviation or perform a Test Method 9 observation to determine the opacity consistent with the 6-minute averaging time specified in 30 TAC § 111.111(a)(1)(B). An additional provision is included to monitor combustion sources more frequently than quarterly if alternate fuels are

burned for periods greater than 24 consecutive hours. This will address possible emissions that may arise when switching fuel types.

Federal Regulatory Applicability Determinations

The following chart summarizes the applicability of the principal air pollution regulatory programs to the permit area:

Regulatory Program	Applicability (Yes/No)
Prevention of Significant Deterioration (PSD)	No
Nonattainment New Source Review (NNSR)	No
Minor NSR	Yes
40 CFR Part 60 - New Source Performance Standards	Yes
40 CFR Part 61 - National Emission Standards for Hazardous Air Pollutants (NESHAPs)	No
40 CFR Part 63 - NESHAPs for Source Categories	Yes
Title IV (Acid Rain) of the Clean Air Act (CAA)	No
Title V (Federal Operating Permits) of the CAA	Yes
Title VI (Stratospheric Ozone Protection) of the CAA	Yes
CSAPR (Cross-State Air Pollution Rule)	No
Federal Implementation Plan for Regional Haze (Texas SO_2 Trading Program)	No

Basis for Applying Permit Shields

An operating permit applicant has the opportunity to specifically request a permit shield to document that specific applicable requirements do not apply to emission units in the permit. A permit shield is a special condition stating that compliance with the conditions of the permit shall be deemed compliance with the specified potentially applicable requirements or specified potentially applicable state-only requirements. A permit shield has been requested in the application for specific emission units. For the permit shield requests that have been approved, the basis of determination for regulations that the owner/operator need not comply with are located in the “Permit Shield” attachment of the permit.

Insignificant Activities and Emission Units

In general, units not meeting the criteria for inclusion on either Form OP-SUM or Form OP-REQ1 are not required to be addressed in the operating permit application. Examples of these types of units include, but are not limited to, the following:

De Minimis Sources

1. Sources identified in the “De Minimis Facilities or Sources” list maintained by TCEQ. The list is available at https://www.tceq.texas.gov/permitting/air/newsourcereview/de_minimis.html.

Miscellaneous Sources

2. Office activities such as photocopying, blueprint copying, and photographic processes.
3. Outdoor barbecue pits, campfires, and fireplaces.
4. Storage and handling of sealed portable containers, cylinders, or sealed drums.
5. Vehicle exhaust from maintenance or repair shops.
6. Storage and use of non-VOC products or equipment for maintaining motor vehicles operated at the site (including but not limited to, antifreeze and fuel additives).
7. Air contaminant detectors and recorders, combustion controllers and shut-off devices, product analyzers, laboratory analyzers, continuous emissions monitors, other analyzers and monitors, and emissions associated with sampling activities. Exception to this category includes sampling activities that are deemed fugitive emissions and under a regulatory leak detection and repair program.
8. Steam vents, steam leaks, and steam safety relief valves, provided the steam (or boiler feedwater) has not contacted other materials or fluids containing regulated air pollutants other than boiler water treatment chemicals.
9. Storage of water that has not contacted other materials or fluids containing regulated air pollutants other than boiler water treatment chemicals.
10. Well cellars.
11. Fire or emergency response equipment and training, including but not limited to, use of fire control equipment including equipment testing and training, and open burning of materials or fuels associated with firefighting training.
12. Equipment used exclusively for the melting or application of wax.
13. Instrument systems utilizing air, natural gas, nitrogen, oxygen, carbon dioxide, helium, neon, argon, krypton, and xenon.
14. Battery recharging areas.

Sources Authorized by 30 TAC Chapter 106, Permits by Rule

15. Sources authorized by §106.102: Combustion units designed and used exclusively for comfort heating purposes employing liquid petroleum gas, natural gas, solid wood, or distillate fuel oil.
16. Sources authorized by §106.122: Bench scale laboratory equipment and laboratory equipment used exclusively for chemical and physical analysis, including but not limited to, assorted vacuum producing devices and laboratory fume hoods.
17. Sources authorized by §106.141: Batch mixers with rated capacity of 27 cubic feet or less for mixing cement, sand, aggregate, lime, gypsum, additives, and/or water to produce concrete, grout, stucco, mortar, or other similar products.
18. Sources authorized by §106.143: Wet sand and gravel production facilities that obtain material from subterranean and subaqueous beds where the deposits of sand and gravel are consolidated granular materials resulting from natural disintegration of rock and stone and have a production rate of 500 tons per hour or less.
19. Sources authorized by §106.148: Railcar or truck unloading of wet sand, gravel, aggregate, coal, lignite, and scrap iron or scrap steel (but not including metal ores, metal oxides, battery parts, or fine dry materials) into trucks or other railcars for transportation to other locations.
20. Sources authorized by §106.149: Sand and gravel production facilities that obtain material from deposits of sand and gravel consisting of natural disintegration of rock and stone, provided that crushing or breaking operations are not used and no blasting is conducted to obtain the material.
21. Sources authorized by §106.161: Animal feeding operations which confine animals in numbers specified and any associated on-site feed handling and/or feed millings operations, not including caged laying and caged pullet operations.
22. Sources authorized by §106.162: Livestock auction sales facilities.
23. Sources authorized by §106.163: All animal racing facilities, domestic animal shelters, zoos, and their associated confinement areas, stables, feeding areas, and waste collection and treatment facilities, other than incineration units.
24. Sources authorized by §106.229: Equipment used exclusively for the dyeing or stripping of textiles.

25. Sources authorized by §106.241: Any facility where animals or poultry are slaughtered and prepared for human consumption provided that waste products such as blood, offal, and feathers are stored in such a manner as to prevent the creation of a nuisance condition and these waste products are removed from the premises daily or stored under refrigeration.
26. Sources authorized by §106.242: Equipment used in eating establishments for the purpose of preparing food for human consumption.
27. Sources authorized by §106.243: Smokehouses in which the maximum horizontal inside cross-sectional area does not exceed 100 square feet.
28. Sources authorized by §106.244: Ovens, mixers, blenders, barbecue pits, and cookers if the products are edible and intended for human consumption.
29. Sources authorized by §106.266: Vacuum cleaning systems used exclusively for industrial, commercial, or residential housekeeping purposes.
30. Sources authorized by §106.301: Aqueous fertilizer storage tanks.
31. Sources authorized by §106.313: All closed tumblers used for the cleaning or deburring of metal products without abrasive blasting, and all open tumblers with a batch capacity of 1,000 lbs. or less.
32. Sources authorized by §106.316: Equipment used for inspection of metal products.
33. Sources authorized by §106.317: Equipment used exclusively for rolling, forging, pressing, drawing, spinning, or extruding either hot or cold metals by some mechanical means.
34. Sources authorized by §106.318: Die casting machines.
35. Sources authorized by §106.319: Foundry sand mold forming equipment to which no heat is applied.
36. Sources authorized by §106.331: Equipment used exclusively to package pharmaceuticals and cosmetics or to coat pharmaceutical tablets.
37. Sources authorized by §106.333: Equipment used exclusively for the mixing and blending of materials at ambient temperature to make water-based adhesives.
38. Sources authorized by §106.372: Any air separation or other industrial gas production, storage, or packaging facility. Industrial gases, for purposes of this list, include only oxygen, nitrogen, helium, neon, argon, krypton, and xenon.
39. Sources authorized by §106.391: Presses used for the curing of rubber products and plastic products.
40. Sources authorized by §106.394: Equipment used for compression molding and injection molding of plastics.
41. Sources authorized by §106.414: Equipment used exclusively for the packaging of lubricants or greases.
42. Sources authorized by §106.415: Laundry dryers, extractors, and tumblers used for fabrics cleaned with water solutions of bleach or detergents.
43. Sources authorized by §106.431: Equipment used exclusively to mill or grind coatings and molding compounds where all materials charged are in paste form.
44. Sources authorized by §106.432: Containers, reservoirs, or tanks used exclusively for dipping operations for coating objects with oils, waxes, or greases where no organic solvents, diluents, or thinners are used; or dipping operations for applying coatings of natural or synthetic resins which contain no organic solvents.
45. Sources authorized by §106.451: Blast cleaning equipment using a suspension of abrasives in water.
46. Sources authorized by §106.453: Equipment used for washing or drying products fabricated from metal or glass, provided no volatile organic materials are used in the process and no oil or solid fuel is burned.
47. Sources authorized by §106.471: Equipment used exclusively to store or hold dry natural gas.
48. Sources authorized by §106.531: Sewage treatment facilities, excluding combustion or incineration equipment, land farms, or grease trap waste handling or treatment facilities.

Determination of Applicable Requirements

The tables below include the applicability determinations for the emission units, the index number(s) where applicable, and all relevant unit attribute information used to form the basis of the applicability determination. The unit attribute information is a description of the physical properties of an emission unit which is used to determine the requirements to which the permit holder must comply. For more information about the descriptions of the unit attributes specific Unit Attribute Forms may be viewed at www.tceq.texas.gov/permitting/air/nav/air_all_ua_forms.html.

A list of unit attribute forms is included at the end of this document. Some examples of unit attributes include construction date; product stored in a tank; boiler fuel type; etc.. Generally, multiple attributes are needed to determine the requirements for a given emission unit and index number. The table below lists these attributes in the column entitled "Basis of Determination." Attributes that demonstrate that an applicable requirement applies will be the factual basis for

the specific citations in an applicable requirement that apply to a unit for that index number. The TCEQ Air Permits Division has developed flowcharts for determining applicability of state and federal regulations based on the unit attribute information in a Decision Support System (DSS). These flowcharts can be accessed via the internet at www.tceq.texas.gov/permitting/air/nav/air_supportsys.html. The Air Permits Division staff may also be contacted for assistance at (512) 239-1250.

The attributes for each unit and corresponding index number provide the basis for determining the specific legal citations in an applicable requirement that apply, including emission limitations or standards, monitoring, recordkeeping, and reporting. The rules were found to apply or not apply by using the unit attributes as answers to decision questions found in the flowcharts of the DSS. Some additional attributes indicate which legal citations of a rule apply. The legal citations that apply to each emission unit may be found in the Applicable Requirements Summary table of the draft permit. There may be some entries or rows of units and rules not found in the permit, or if the permit contains a permit shield, repeated in the permit shield area. These are sets of attributes that describe negative applicability, or; in other words, the reason why a potentially applicable requirement does not apply.

If applicability determinations have been made which differ from the available flowcharts, an explanation of the decisions involved in the applicability determination is specified in the column “Changes and Exceptions to RRT.” If there were no exceptions to the DSS, then this column has been removed.

The draft permit includes all emission limitations or standards, monitoring, recordkeeping and reporting required by each applicable requirement. If an applicable requirement does not require monitoring, recordkeeping, or reporting, the word “None” will appear in the Applicable Requirements Summary table. If additional periodic monitoring is required for an applicable requirement, it will be explained in detail in the portion of this document entitled “Rationale for Compliance Assurance Monitoring (CAM)/ Periodic Monitoring Methods Selected.”

When attributes demonstrate that a unit is not subject to an applicable requirement, the applicant may request a permit shield for those items. The portion of this document entitled “Basis for Applying Permit Shields” specifies which units, if any, have a permit shield.

Operational Flexibility

When an emission unit has multiple operating scenarios, it will have a different index number associated with each operating condition. This means that units are permitted to operate under multiple operating conditions. The applicable requirements for each operating condition are determined by a unique set of unit attributes. For example, a tank may store two different products at different points in time. The tank may, therefore, need to comply with two distinct sets of requirements, depending on the product that is stored. Both sets of requirements are included in the permit, so that the permit holder may store either product in the tank.

Determination of Applicable Requirements

Unit ID	Regulation	Index Number	Basis of Determination*
EMGEN	40 CFR Part 60, Subpart IIII	60IIII-2005-	Applicability Date = Stationary CI ICE commenced construction, reconstruction, or modification on or before 07/11/2005.
EMGEN	40 CFR Part 63, Subpart ZZZZ	63ZZZZ-02-	HAP Source = The site is a major source of hazardous air pollutants as defined in 40 CFR § 63.2 Brake HP = Stationary RICE with a brake HP greater than 500 HP. Construction/Reconstruction Date = Commenced construction or reconstruction before December 19, 2002. Service Type = Emergency use where the RICE does not operate as specified in 40 CFR §63.6640(f)(2)(ii) and (iii) or does not operate as specified in 40 CFR §63.6640(f)(4)(ii).
EMGEN2	40 CFR Part 60, Subpart IIII	60IIII-2005+	Applicability Date = Stationary CI ICE commenced construction, reconstruction, or modification after 07/11/2005. Exemptions = The CI ICE is not exempt due to national security, testing at an engine test cell/stand or as a temporary replacement. Service = CI ICE is an emergency engine. Commencing = CI ICE was newly constructed after 07/11/2005. Manufacture Date = Date of manufacture was after 04/01/2006. Diesel = Diesel fuel is used. Displacement = Displacement is greater than or equal to 10 and less than 15 liters per cylinder. Model Year = CI ICE was manufactured in model year 2014. Kilowatts = Power rating is greater than 368 KW and less than 600 KW. Standards = The emergency CI ICE does not meet the standards applicable to non-emergency engines. Compliance Option = The CI ICE and control device is installed, configured, operated, and maintained according to the manufacturer's emission-related written instructions.
EMGEN2	40 CFR Part 63, Subpart ZZZZ	63ZZZZ-06+	HAP Source = The site is a major source of hazardous air pollutants as defined in 40 CFR § 63.2 Brake HP = Stationary RICE with a brake HP greater than 500 HP. Construction/Reconstruction Date = Commenced construction or reconstruction on or after June 12, 2006. Service Type = Emergency use where the RICE does not operate as specified in 40 CFR §63.6640(f)(2)(ii) and (iii) or does not operate as specified in 40 CFR §63.6640(f)(4)(ii).
AKMU-P	30 TAC Chapter 115, Storage of VOCs	R5112-AKMUP	Alternate Control Requirement = Not using an alternate method for demonstrating and documenting continuous compliance with applicable control requirements or exemption criteria. Product Stored = VOC other than crude oil or condensate Storage Capacity = Capacity is less than or equal to 1,000 gallons
AKMU-P	40 CFR Part 60, Subpart Kb	60KB-10K-	Product Stored = Volatile organic liquid Storage Capacity = Capacity is less than 10,600 gallons (40,000 liters)
AKMU-TK1	30 TAC Chapter 115, Storage of VOCs	R5112-AKMUTK1	Alternate Control Requirement = Not using an alternate method for demonstrating and documenting continuous compliance with applicable control requirements or exemption criteria.

			Product Stored = VOC other than crude oil or condensate Storage Capacity = Capacity is less than or equal to 1,000 gallons
AKMU-TK1	40 CFR Part 60, Subpart Kb	60KB-10K-	Product Stored = Volatile organic liquid Storage Capacity = Capacity is less than 10,600 gallons (40,000 liters)
AKMU-TK2	30 TAC Chapter 115, Storage of VOCs	R5112-AKMUTK2	Alternate Control Requirement = Not using an alternate method for demonstrating and documenting continuous compliance with applicable control requirements or exemption criteria. Product Stored = VOC other than crude oil or condensate Storage Capacity = Capacity is less than or equal to 1,000 gallons
AKMU-TK2	40 CFR Part 60, Subpart Kb	60KB-10K-	Product Stored = Volatile organic liquid Storage Capacity = Capacity is less than 10,600 gallons (40,000 liters)
H2SO4	30 TAC Chapter 115, Storage of VOCs	R5112-1-	Alternate Control Requirement = Not using an alternate method for demonstrating and documenting continuous compliance with applicable control requirements or exemption criteria. Product Stored = VOC other than crude oil or condensate Storage Capacity = Capacity is greater than 1,000 gallons but less than or equal to 25,000 gallons Tank Description = Tank does not require emission controls True Vapor Pressure = True vapor pressure is less than 1.0 psia
H2SO4	30 TAC Chapter 115, Storage of VOCs	R5112-1-1.5	Alternate Control Requirement = Not using an alternate method for demonstrating and documenting continuous compliance with applicable control requirements or exemption criteria. Product Stored = VOC other than crude oil or condensate Storage Capacity = Capacity is greater than 1,000 gallons but less than or equal to 25,000 gallons Tank Description = Tank does not require emission controls True Vapor Pressure = True vapor pressure is greater than or equal to 1.0 psia but less than 1.5 psia
H2SO4	40 CFR Part 60, Subpart Kb	60KB-10K-	Product Stored = Volatile organic liquid Storage Capacity = Capacity is less than 10,600 gallons (40,000 liters)
L3-260	30 TAC Chapter 115, Storage of VOCs	R5112-L3260	Alternate Control Requirement = Not using an alternate method for demonstrating and documenting continuous compliance with applicable control requirements or exemption criteria. Product Stored = VOC other than crude oil or condensate Storage Capacity = Capacity is less than or equal to 1,000 gallons
L3-260	40 CFR Part 60, Subpart Kb	60KB-10K-	Product Stored = Volatile organic liquid Storage Capacity = Capacity is less than 10,600 gallons (40,000 liters)
L3-26T-3	40 CFR Part 63, Subpart FFFF	63FFFF-76-FLR2	Emission Standard = HAP vapor pressure is less than 76.6 and a flare is being used for control per § 63.2470(a)-Table 4.1.b.iii. Designated HAL = The emission stream is not designated as halogenated. Determined HAL = The emission stream is determined not to be halogenated.

			Prior Eval = The data from a prior evaluation or assessment is used. Negative Pressure = The closed vent system is operated and maintained at or above atmospheric pressure. Bypass Line = Bypass line valves are secured in the closed position with a car-seal or lock-and-key configuration.
L3-26T-3	40 CFR Part 63, Subpart FFFF	63FFFF-76-TOX	Emission Standard = HAP vapor pressure is < 76.6 and a non-flare CD is being used to meet 95% reduction per § 63.2470(a)-Table 4.1.b.ii Alt 63SS Mon Parameters = Alternate monitoring parameters or requirements have not been approved by the Administrator or have not been requested. CEMS = A continuous parameter monitoring system is used. SS Device Type = Incinerator other than a catalytic incinerator. Meets 63.998(b)(2) = The control device does not meet criteria in § 63.985(b)(2). Designated HAL = The emission stream is not designated as halogenated. Determined HAL = The emission stream is determined not to be halogenated. HAL Device Type = No halogen scrubber or other halogen reduction device is used. Prior Test = The data from a prior performance test is used. Negative Pressure = The closed vent system is operated and maintained at or above atmospheric pressure. Bypass Line = Bypass line valves are secured in the closed position with a car-seal or lock-and-key configuration.
L3-26T-3	40 CFR Part 63, Subpart FFFF	63FFFF-76-VS62C	Emission Standard = HAP vapor pressure is less than 76.6 and a flare is being used for control per § 63.2470(a)-Table 4.1.b.iii. Designated HAL = The emission stream is not designated as halogenated. Determined HAL = The emission stream is determined not to be halogenated. Prior Eval = The data from a prior evaluation or assessment is used. Negative Pressure = The closed vent system is operated and maintained at or above atmospheric pressure. Bypass Line = Bypass line valves are secured in the closed position with a car-seal or lock-and-key configuration.
L3-28T-3	40 CFR Part 63, Subpart FFFF	63FFFF-76-FLR2	Emission Standard = HAP vapor pressure is less than 76.6 and a flare is being used for control per § 63.2470(a)-Table 4.1.b.iii. Designated HAL = The emission stream is not designated as halogenated. Determined HAL = The emission stream is determined not to be halogenated. Prior Eval = The data from a prior evaluation or assessment is used. Negative Pressure = The closed vent system is operated and maintained at or above atmospheric pressure. Bypass Line = Bypass line valves are secured in the closed position with a car-seal or lock-and-key configuration.
L3-28T-3	40 CFR Part 63, Subpart FFFF	63FFFF-76-TOX	Emission Standard = HAP vapor pressure is < 76.6 and a non-flare CD is being used to meet 95% reduction per § 63.2470(a)-Table 4.1.b.ii Alt 63SS Mon Parameters = Alternate monitoring parameters or requirements have not been approved by the Administrator or have not been requested. CEMS = A continuous parameter monitoring system is used. SS Device Type = Incinerator other than a catalytic incinerator. Meets 63.998(b)(2) = The control device does not meet criteria in § 63.985(b)(2). Designated HAL = The emission stream is not designated as halogenated.

			Determined HAL = The emission stream is determined not to be halogenated. HAL Device Type = No halogen scrubber or other halogen reduction device is used. Prior Test = The data from a prior performance test is used. Negative Pressure = The closed vent system is operated and maintained at or above atmospheric pressure. Bypass Line = Bypass line valves are secured in the closed position with a car-seal or lock-and-key configuration.
L3-28T-3	40 CFR Part 63, Subpart FFFF	63FFFF-76-VS62C	Emission Standard = HAP vapor pressure is less than 76.6 and a flare is being used for control per § 63.2470(a)-Table 4.1.b.iii. Designated HAL = The emission stream is not designated as halogenated. Determined HAL = The emission stream is determined not to be halogenated. Prior Eval = The data from a prior evaluation or assessment is used. Negative Pressure = The closed vent system is operated and maintained at or above atmospheric pressure. Bypass Line = Bypass line valves are secured in the closed position with a car-seal or lock-and-key configuration.
NEUT-1	30 TAC Chapter 115, Storage of VOCs	R5112-NEUT-1	Alternate Control Requirement = Not using an alternate method for demonstrating and documenting continuous compliance with applicable control requirements or exemption criteria. Product Stored = VOC other than crude oil or condensate Storage Capacity = Capacity is greater than 25,000 gallons but less than or equal to 40,000 gallons Tank Description = Tank does not require emission controls True Vapor Pressure = True vapor pressure is less than 1.0 psia
TA-004	40 CFR Part 63, Subpart FFFF	63FFFF-76-FLR2	Emission Standard = HAP vapor pressure is less than 76.6 and a flare is being used for control per § 63.2470(a)-Table 4.1.b.iii. Designated HAL = The emission stream is not designated as halogenated. Determined HAL = The emission stream is determined not to be halogenated. Prior Eval = The data from a prior evaluation or assessment is used. Negative Pressure = The closed vent system is operated and maintained at or above atmospheric pressure. Bypass Line = Bypass line valves are secured in the closed position with a car-seal or lock-and-key configuration.
TA-004	40 CFR Part 63, Subpart FFFF	63FFFF-76-TOX	Emission Standard = HAP vapor pressure is < 76.6 and a non-flare CD is being used to meet 95% reduction per § 63.2470(a)-Table 4.1.b.ii Alt 63SS Mon Parameters = Alternate monitoring parameters or requirements have not been approved by the Administrator or have not been requested. CEMS = A continuous parameter monitoring system is used. SS Device Type = Incinerator other than a catalytic incinerator. Meets 63.998(b)(2) = The control device does not meet criteria in § 63.985(b)(2). Designated HAL = The emission stream is not designated as halogenated. Determined HAL = The emission stream is determined not to be halogenated. HAL Device Type = No halogen scrubber or other halogen reduction device is used. Prior Test = The data from a prior performance test is used. Negative Pressure = The closed vent system is operated and maintained at or above atmospheric pressure.

			Bypass Line = Bypass line valves are secured in the closed position with a car-seal or lock-and-key configuration.
TA-004	40 CFR Part 63, Subpart FFFF	63FFFF-76-VS62C	Emission Standard = HAP vapor pressure is less than 76.6 and a flare is being used for control per § 63.2470(a)-Table 4.1.b.iii. Designated HAL = The emission stream is not designated as halogenated. Determined HAL = The emission stream is determined not to be halogenated. Prior Eval = The data from a prior evaluation or assessment is used. Negative Pressure = The closed vent system is operated and maintained at or above atmospheric pressure. Bypass Line = Bypass line valves are secured in the closed position with a car-seal or lock-and-key configuration.
VE-030	30 TAC Chapter 115, Storage of VOCs	R5112-VE030	Alternate Control Requirement = Not using an alternate method for demonstrating and documenting continuous compliance with applicable control requirements or exemption criteria. Product Stored = VOC other than crude oil or condensate Storage Capacity = Capacity is less than or equal to 1,000 gallons
VE-030	40 CFR Part 60, Subpart Kb	60KB-10K-	Product Stored = Volatile organic liquid Storage Capacity = Capacity is less than 10,600 gallons (40,000 liters)
VE-470	30 TAC Chapter 115, Storage of VOCs	R5112-FLR2	Alternate Control Requirement = Not using an alternate method for demonstrating and documenting continuous compliance with applicable control requirements or exemption criteria. Product Stored = VOC other than crude oil or condensate Storage Capacity = Capacity is greater than 1,000 gallons but less than or equal to 25,000 gallons Tank Description = Tank using a vapor recovery system (VRS) True Vapor Pressure = True vapor pressure is greater than or equal to 1.5 psia Control Device Type = Flare
VE-470	30 TAC Chapter 115, Storage of VOCs	R5112-TOX	Alternate Control Requirement = Not using an alternate method for demonstrating and documenting continuous compliance with applicable control requirements or exemption criteria. Product Stored = VOC other than crude oil or condensate Storage Capacity = Capacity is greater than 1,000 gallons but less than or equal to 25,000 gallons Tank Description = Tank using a vapor recovery system (VRS) True Vapor Pressure = True vapor pressure is greater than or equal to 1.5 psia Control Device Type = Direct-flame incinerator
VE-470	30 TAC Chapter 115, Storage of VOCs	R5112-VS62C	Alternate Control Requirement = Not using an alternate method for demonstrating and documenting continuous compliance with applicable control requirements or exemption criteria. Product Stored = VOC other than crude oil or condensate Storage Capacity = Capacity is greater than 1,000 gallons but less than or equal to 25,000 gallons Tank Description = Tank using a vapor recovery system (VRS) True Vapor Pressure = True vapor pressure is greater than or equal to 1.5 psia Control Device Type = Flare

VE-470	40 CFR Part 60, Subpart Kb	60KB-FLR2-2	Product Stored = Volatile organic liquid Storage Capacity = Capacity is greater than or equal to 19,813 gallons but less than 39,890 gallons (capacity is greater than 75,000 liters but less than or equal to 151,000 liters) Maximum True Vapor Pressure = True vapor pressure is greater than or equal to 2.2 psia but less than 4.0 psia Storage Vessel Description = Closed vent system (CVS) with a flare used as the control device (fixed roof)
VE-470	40 CFR Part 60, Subpart Kb	60KB-TOX-2	Product Stored = Volatile organic liquid Storage Capacity = Capacity is greater than or equal to 19,813 gallons but less than 39,890 gallons (capacity is greater than 75,000 liters but less than or equal to 151,000 liters) Maximum True Vapor Pressure = True vapor pressure is greater than or equal to 2.2 psia but less than 4.0 psia Storage Vessel Description = CVS and control device other than a flare (fixed roof)
VE-470	40 CFR Part 60, Subpart Kb	60KB-VS62C-2	Product Stored = Volatile organic liquid Storage Capacity = Capacity is greater than or equal to 19,813 gallons but less than 39,890 gallons (capacity is greater than 75,000 liters but less than or equal to 151,000 liters) Maximum True Vapor Pressure = True vapor pressure is greater than or equal to 2.2 psia but less than 4.0 psia Storage Vessel Description = Closed vent system (CVS) with a flare used as the control device (fixed roof)
VE-470	40 CFR Part 63, Subpart FFFF	63FFFF-76-FLR2	Emission Standard = HAP vapor pressure is less than 76.6 and a flare is being used for control per § 63.2470(a)-Table 4.1.b.iii. Designated HAL = The emission stream is not designated as halogenated. Determined HAL = The emission stream is determined not to be halogenated. Prior Eval = The data from a prior evaluation or assessment is used. Negative Pressure = The closed vent system is operated and maintained at or above atmospheric pressure. Bypass Line = Bypass line valves are secured in the closed position with a car-seal or lock-and-key configuration.
VE-470	40 CFR Part 63, Subpart FFFF	63FFFF-76-TOX	Emission Standard = HAP vapor pressure is < 76.6 and a non-flare CD is being used to meet 95% reduction per § 63.2470(a)-Table 4.1.b.ii Alt 63SS Mon Parameters = Alternate monitoring parameters or requirements have not been approved by the Administrator or have not been requested. CEMS = A continuous parameter monitoring system is used. SS Device Type = Incinerator other than a catalytic incinerator. Meets 63.998(b)(2) = The control device does not meet criteria in § 63.985(b)(2). Designated HAL = The emission stream is not designated as halogenated. Determined HAL = The emission stream is determined not to be halogenated. HAL Device Type = No halogen scrubber or other halogen reduction device is used. Prior Test = The data from a prior performance test is used. Negative Pressure = The closed vent system is operated and maintained at or above atmospheric pressure. Bypass Line = Bypass line valves are secured in the closed position with a car-seal or lock-and-key configuration.
VE-470	40 CFR Part 63, Subpart	63FFFF-76-VS62C	Emission Standard = HAP vapor pressure is less than 76.6 and a flare is being used for control per § 63.2470(a)-Table 4.1.b.iii.

	FFFF		Designated HAL = The emission stream is not designated as halogenated. Determined HAL = The emission stream is determined not to be halogenated. Prior Eval = The data from a prior evaluation or assessment is used. Negative Pressure = The closed vent system is operated and maintained at or above atmospheric pressure. Bypass Line = Bypass line valves are secured in the closed position with a car-seal or lock-and-key configuration.
VE-472	30 TAC Chapter 115, Storage of VOCs	R5112-RTOX	Alternate Control Requirement = Not using an alternate method for demonstrating and documenting continuous compliance with applicable control requirements or exemption criteria. Product Stored = VOC other than crude oil or condensate Storage Capacity = Capacity is greater than 1,000 gallons but less than or equal to 25,000 gallons Tank Description = Tank using a vapor recovery system (VRS) True Vapor Pressure = True vapor pressure is greater than or equal to 1.5 psia Control Device Type = Direct-flame incinerator
VE-472	40 CFR Part 60, Subpart Kb	60KB-10K-	Product Stored = Volatile organic liquid Storage Capacity = Capacity is less than 10,600 gallons (40,000 liters)
VE-473	30 TAC Chapter 115, Storage of VOCs	R5112-FLR2-3	Alternate Control Requirement = Not using an alternate method for demonstrating and documenting continuous compliance with applicable control requirements or exemption criteria. Product Stored = VOC other than crude oil or condensate Storage Capacity = Capacity is greater than 25,000 gallons but less than or equal to 40,000 gallons Tank Description = Tank using a vapor recovery system (VRS) True Vapor Pressure = True vapor pressure is greater than or equal to 1.5 psia Control Device Type = Flare

Product Stored = VOC other than crude oil or condensate Storage Capacity = Capacity is less than or equal to 1,000 gallons
VS-91T	40 CFR Part 60, Subpart Kb	60KB-10K-	Product Stored = Volatile organic liquid Storage Capacity = Capacity is less than 10,600 gallons (40,000 liters)
TRUCKLOAD	30 TAC Chapter 115, Loading and Unloading of	R5211-FLR2	Chapter 115 Facility Type = Facility type other than a gasoline terminal, gasoline bulk plant, motor vehicle fuel dispensing facility or marine terminal.

	VOC		Alternate Control Requirement (ACR) = No alternate control requirements are being utilized. Product Transferred = Volatile organic compounds other than liquefied petroleum gas and gasoline. Transfer Type = Loading and unloading. True Vapor Pressure = True vapor pressure greater than or equal to 0.5 psia. Daily Throughput = Daily throughput not determined since 30 TAC § 115.217(a)(2)(A) or 30 TAC § 115.217(b)(3)(A) exemption is not utilized. Control Options = Vapor control system that maintains a control efficiency of at least 90%. Chapter 115 Control Device Type = Vapor control system with a flare. Vapor Tight = All liquid and vapor lines are equipped with fittings which make vapor-tight connections that close automatically when disconnected.
TRUCKLOAD	30 TAC Chapter 115, Loading and Unloading of VOC	R5211-FLRVS62C	Chapter 115 Facility Type = Facility type other than a gasoline terminal, gasoline bulk plant, motor vehicle fuel dispensing facility or marine terminal. Alternate Control Requirement (ACR) = No alternate control requirements are being utilized. Product Transferred = Volatile organic compounds other than liquefied petroleum gas and gasoline. Transfer Type = Loading and unloading. True Vapor Pressure = True vapor pressure greater than or equal to 0.5 psia. Daily Throughput = Daily throughput not determined since 30 TAC § 115.217(a)(2)(A) or 30 TAC § 115.217(b)(3)(A) exemption is not utilized. Control Options = Vapor control system that maintains a control efficiency of at least 90%. Chapter 115 Control Device Type = Vapor control system with a flare. Vapor Tight = All liquid and vapor lines are equipped with fittings which make vapor-tight connections that close automatically when disconnected.
TRUCKLOAD	30 TAC Chapter 115, Loading and Unloading of VOC	R5211-TOX	Chapter 115 Facility Type = Facility type other than a gasoline terminal, gasoline bulk plant, motor vehicle fuel dispensing facility or marine terminal. Alternate Control Requirement (ACR) = No alternate control requirements are being utilized. Product Transferred = Volatile organic compounds other than liquefied petroleum gas and gasoline. Transfer Type = Loading and unloading. True Vapor Pressure = True vapor pressure greater than or equal to 0.5 psia. Daily Throughput = Daily throughput not determined since 30 TAC § 115.217(a)(2)(A) or 30 TAC § 115.217(b)(3)(A) exemption is not utilized. Control Options = Vapor control system that maintains a control efficiency of at least 90%. Chapter 115 Control Device Type = Vapor control system with a direct flame incinerator. Vapor Tight = All liquid and vapor lines are equipped with fittings which make vapor-tight connections that close automatically when disconnected.
TRUCKLOAD	40 CFR Part 63, Subpart FFFF	63FFFF-FLR2	Emission Standard = A flare is being used per § 63.2475(a) - Table 5.1.b. Designated Hal = The emission stream is not designated as halogenated. Determined Hal = The emission stream is determined to be nonhalogenated. Prior Eval = The data from a prior evaluation or assessment is used. Negative Pressure = The closed vent system is operated and maintained at or above atmospheric pressure.

			Bypass Line = Bypass line valves are secured in the closed position with a car-seal or lock-and-key configuration.
TRUCKLOAD	40 CFR Part 63, Subpart FFFF	63FFFF-FLRVS62C	Emission Standard = A flare is being used per § 63.2475(a) - Table 5.1.b. Designated Hal = The emission stream is not designated as halogenated. Determined Hal = The emission stream is determined to be nonhalogenated. Prior Eval = The data from a prior evaluation or assessment is used. Negative Pressure = The closed vent system is operated and maintained at or above atmospheric pressure. Bypass Line = Bypass line valves are secured in the closed position with a car-seal or lock-and-key configuration.
TRUCKLOAD	40 CFR Part 63, Subpart FFFF	63FFFF-TOX	Emission Standard = A non-flare CD is being used to meet 98% reduction per § 63.2475(a) - Table 5.1.a. Designated Hal = The emission stream is not designated as halogenated. Determined Hal = The emission stream is determined to be nonhalogenated. Prior Eval = The data from a prior evaluation or assessment is used. Negative Pressure = The closed vent system is operated and maintained at or above atmospheric pressure. Bypass Line = Bypass line valves are secured in the closed position with a car-seal or lock-and-key configuration. Small Device = A small control device (defined in § 63.2550) is not being used. Alt 63SS Mon Parameters = Alternate monitoring parameters or requirements have not been approved by the Administrator or have not been requested. CEMS = Continuous parameter monitoring is used. SS Device Type = Incinerator other than a catalytic incinerator. Meets 63.988(b)(2) = The control device does not meet criteria in § 63.985(b)(2). Hal Device Type = No halogen scrubber or other halogen reduction device is used
FL-2	30 TAC Chapter 111, Visible Emissions	R1111-FL2	Acid Gases Only = Flare is not used only as an acid gas flare as defined in 30 TAC § 101.1. Emergency/Upset Conditions Only = Flare is used under conditions other than emergency or upset conditions.
FL-2	30 TAC Chapter 115, HRVOC Vent Gas	R5720-HRVOCFL2	Out of Service = Flare was not permanently out of service by April 1, 2006. Total Gas Stream = Flare receives a total gas stream with greater than 100 ppmv HRVOC at some time. Gas Stream Concentration = Flare receives a gas stream containing 5% or greater HRVOC by weight at some time. Alternative Monitoring Approach = No alternative monitoring approaches as outlined in 115.725(m)(1) or 115.725(m)(2) are used. Modifications to Testing/Monitoring = No modifications to test methods or monitoring methods specified in this section. Flare Type = Flare is complying with the requirements of § 115.725(d) to demonstrate compliance. Tank Service = Flare is not in dedicated service for storage tanks with 95% or greater of an individual HRVOC.
FL-2	40 CFR Part 60, Subpart A	60A-FL2	Subject to 40 CFR § 60.18 = Flare is subject to 40 CFR § 60.18. Adhering to Heat Content Specifications = Adhering to the heat content specifications in 40 CFR § 60.18(c)(3)(ii) and the maximum tip velocity specifications in 40 CFR § 60.18(c)(4)(i)-(iii) or (c)(5). Flare Assist Type = Air-assisted
FL-2	40 CFR Part 63, Subpart	63A-FL2	Required Under 40 CFR Part 63 = Flare is required by a Subpart under 40 CFR Part 63. Heat Content Specification = Adhering to the heat content specifications in 40 CFR § 63.11(b)(6)(ii) and the maximum tip

	A		velocity specifications in 40 CFR § 63.11(b)(7) or 40 CFR § 63.11(b)(8). Flare Assist Type = Air assisted
VS-62C	30 TAC Chapter 111, Visible Emissions	R1111-62C	Acid Gases Only = Flare is not used only as an acid gas flare as defined in 30 TAC § 101.1. Emergency/Upset Conditions Only = Flare is used under conditions other than emergency or upset conditions.
VS-62C	30 TAC Chapter 115, HRVOC Vent Gas	R5720-HRVOCFLR1	Out of Service = Flare was not permanently out of service by April 1, 2006. Total Gas Stream = Flare receives a total gas stream with greater than 100 ppmv HRVOC at some time. Gas Stream Concentration = Flare receives a gas stream containing 5% or greater HRVOC by weight at some time. Alternative Monitoring Approach = No alternative monitoring approaches as outlined in 115.725(m)(1) or 115.725(m)(2) are used. Modifications to Testing/Monitoring = No modifications to test methods or monitoring methods specified in this section. Flare Type = Flare is in multi-purpose service. Monitoring Requirements = Flare is complying with rule base requirements other than the continuous monitoring requirements of § 115.725(d). Multi-Purpose Usage = Flare is used for abatement of emissions from scheduled or unscheduled maintenance, startup or shutdown activities AND as an emergency flare. Flow Rate = Flow rate of the gas routed to the flare is determined using process knowledge and engineering calculations. Physical Seal = Flare is equipped with a flow monitor or indicator.
VS-62C	40 CFR Part 60, Subpart A	60A-VS62C	Subject to 40 CFR § 60.18 = Flare is subject to 40 CFR § 60.18. Adhering to Heat Content Specifications = Adhering to the heat content specifications in 40 CFR § 60.18(c)(3)(ii) and the maximum tip velocity specifications in 40 CFR § 60.18(c)(4)(i)-(iii) or (c)(5). Flare Assist Type = Steam-assisted Flare Exit Velocity = Flare exit velocity is greater than or equal to 60 ft/s (18.3 m/sec) but less than 400 ft/s (122 m/sec). Heating Value of Gas = Heating value is greater than 1000 Btu/scf (37.3 MJ/scm)
VS-62C	40 CFR Part 63, Subpart A	63A-VS62C	Required Under 40 CFR Part 63 = Flare is required by a Subpart under 40 CFR Part 63. Heat Content Specification = Adhering to the heat content specifications in 40 CFR § 63.11(b)(6)(ii) and the maximum tip velocity specifications in 40 CFR § 63.11(b)(7) or 40 CFR § 63.11(b)(8). Flare Assist Type = Steam assisted Flare Exit Velocity = Flare exit velocity is greater than or equal to 60 ft/s (18.3 m/sec) but less than 400 ft/s (122 m/sec). Heating Value of Gas = Heating value is greater than 1000 Btu/scf (37.3 MJ/scm).
L3-93F-3	30 TAC Chapter 115, HRVOC Fugitive Emissions	R5780-FUG3	Title 30 TAC §115.780 Applicable = The fugitive unit contains a defined process and Highly Reactive VOC. Less Than 250 Components at Site = The fugitive unit is located at a site with at least 250 fugitive components in VOC service. Weight Percent HRVOC = All components contact only a process fluid that contains at least 5.0% HRVOC by weight on an annual average basis. Pumps with Shaft Seal System = No pumps are equipped with a shaft sealing system that prevents or detects emission of VOC from the seal. Compressors with Shaft Seal System = No compressors are equipped with a shaft sealing system that prevents or detects emission of VOC from the seal.

			Agitators with Shaft Seal System = No agitators are equipped with a shaft sealing system that prevents or detects emission of VOC from the seal. Process Drains = The fugitive unit contains process drains. ACR = No process drains are complying with an alternate control requirement. Complying with § 115.781(b)(9) = Process drains are complying with the requirements of § 115.781(b)(9). Pressure Relief Valves = The fugitive unit contains pressure relief valves. ACR = No pressure relief valves are complying with an alternate control requirement. Complying with § 115.781(b)(9) = Pressure relief valves are complying with the requirements of § 115.781(b)(9). Open-ended Valves or Lines = The fugitive unit does not contain open-ended valves or lines. Bypass Line Valves = The fugitive unit does not contain bypass line valves. Valves (not pressure relief, open-ended or bypass line valves) = The fugitive unit contains valves other than pressure relief, open-ended or bypass line valves. ACR = No valves (other than pressure relief, open-ended, and bypass line) are complying with an alternate control requirement. Complying with § 115.781(b)(9) = Valves (other than pressure relief, open-ended, and bypass line) are complying with the requirements of § 115.781(b)(9). Flanges or Other Connectors = The fugitive unit contains flanges or other connectors. ACR = No flanges or other connectors are complying with an alternate control requirement. Complying with § 115.781(b)(9) = Flanges or other connectors are complying with the requirements of § 115.781(b)(9). Compressor Seals = The fugitive unit contains compressor seals. ACR = No compressor seals are complying with an alternate control requirement. Complying with § 115.781(b)(9) = Compressor seals are complying with the requirements of § 115.781(b)(9). Pump Seals = The fugitive unit contains pump seals. ACR = No pump seals are complying with an alternate control requirement. Complying with § 115.781(b)(9) = Pump seals are complying with the requirements of § 115.781(b)(9). Agitators = The fugitive unit contains agitators. ACR = No agitators are complying with an alternate control requirement. Complying with § 115.781(b)(9) = Agitators are complying with the requirements of § 115.781(b)(9). Heat Exchanger Heads, etc. = The fugitive unit contains heat exchanger heads, sight glasses, meters, gauges, sampling connections, bolter manways, hatches, sump covers, junction vent boxes or covers and seals on VOC water separators. ACR = No heat exchanger heads, sight glasses, meters, gauges, sampling connections, bolted manways, hatches, sump covers, junction box vents, or covers and seals on VOC water separators are complying with an alternate control requirement. Complying with § 115.781(b)(9) = Heat exchanger heads, sight glasses, meters, gauges, sampling connections, bolted manways, hatches, sump covers, junction box vents, or covers and seals on VOC water separators are complying with the requirements of § 115.781(b)(9). Alternative Work Practice in § 115.358 = No components are complying with the alternative work practice requirements in 30 TAC § 115.358.
L3-93F-3	30 TAC Chapter 115, Pet. Refinery & Petrochemicals	R5352-ALL	SOP/GOP Index No. = Owner/Operator assumes VOC fugitive control requirements for all components subject to 30 TAC Chapter 115, Subchapter D, Division 3 with no alternate control or control device. Components Utilizing Alternative Work Practice in § 115.358 = No components in the fugitive unit are using the

			alternative work practice under § 115.358.
L3-93F-3	40 CFR Part 60, Subpart VVa	60VVa-FUG3	Produces Chemicals = The facility produces, as an intermediate or final product, one or more of the chemicals listed in 40 CFR § 60.489a. Affected Facility = The facility is an affected facility as defined in 40 CFR § 60.480a(a)(2). Construction/Modification Date = After November 7, 2006. Compliance Option = Choosing to comply with the provisions of 40 CFR Part 60, Subpart VVa. Design Capacity = Site with a design capacity greater than or equal to 1,000 Mg/yr. Facility Type = Facility does not qualify for one of the exemptions in § 60.480a(d). Pumps in Light Liquid Service = Fugitive unit contains pumps in light liquid service. EEL = No equivalent emission limitation is used for pumps in light liquid service. Complying with 60.482-2a = Pumps in light liquid service are complying with the requirements of § 60.482-2a. Compressors = Fugitive unit contains compressors. EEL = No equivalent emission limitation is used for compressors. Complying with 60.482-3a = Compressors are complying with the requirements of § 60.482-3a. Pressure Relief Devices in Gas/Vapor Service = Fugitive unit contains pressure relief devices in gas/vapor service. Sampling Connection Systems = Fugitive unit contains sampling connection systems. EEL = No equivalent emission limitation is used for sampling connection systems. Complying with 60.482-5a = Sampling connection systems are complying with the requirements of § 60.482-5a. Open-Ended Valves = Fugitive unit does not contain open-ended valves. Valves in Gas/Vapor or Light Liquid Service = Fugitive unit contains valves in gas/vapor or light liquid service. 2.0 % = The owner or operator is not electing to comply with an allowable percentage of valves leaking equal to or less than 2.0%. EEL = No equivalent emission limitation is used for valves in gas/vapor or light liquid service. Complying with 60.482-7a = Valves in gas/vapor or light liquid service are complying with the requirements of § 60.482-7a. Pumps in Heavy Liquid Service = Fugitive unit does not contain pumps in heavy liquid service. Valves in Heavy Liquid Service = Fugitive unit contains valves in heavy liquid service. EEL = No equivalent emission limitation is used for valves in heavy liquid service. Complying with 60.482-8a = Valves in heavy liquid service are complying with the requirements of § 60.482-8a. Pressure Relief Devices in Heavy or Light Liquid Service = Fugitive unit contains pressure relief devices in heavy or light liquid service. EEL = No equivalent emission limitation is used for pressure relief devices in heavy or light liquid service. Complying with 60.482-8a = Pressure relief devices in heavy or light liquid service are complying with the requirements of § 60.482-8a. Connectors in Heavy Liquid Service = Fugitive unit does not contain connectors in heavy liquid service. Vapor Recovery System = Fugitive unit does not contain vapor recovery system. Enclosed Combustion Device = Fugitive unit contains at least one enclosed combustion device. EEL = No equivalent emission limitation is used for enclosed combustion devices.

			Complying with 60.482-10a = Enclosed combustion devices are complying with 60.482-10a. Flare = Fugitive unit contains flares. EEL = No equivalent emission limitation is used for flares. Complying with 60.482-10a = Flares are complying with 60.482-10a. CVS = Fugitive unit contains closed vent systems. EEL = No equivalent emission limitation is used for closed vent systems. Complying with 60.482-10a = Closed vent system is complying with § 60.482-10a. Connectors in Gas/Vapor or Light Liquid Service = Fugitive unit contains connectors in gas/vapor or light liquid service.
L3-93F-3	40 CFR Part 63, Subpart FFFF	63FFFF-FUG3	Existing Source = Fugitive unit contains equipment in a new Miscellaneous Chemical Processing Unit.
VS-93	30 TAC Chapter 115, HRVOC Fugitive Emissions	R5780-ALL	SOP Index No. = Owner/Operator assumes HRVOC fugitive control requirements for all components subject to 30 TAC Chapter 115, Subchapter H, Division 3 with no alternate control or control device. Alternative Work Practice in § 115.358 = No components are complying with the alternative work practice requirements in 30 TAC § 115.358.
VS-93	30 TAC Chapter 115, Pet. Refinery & Petrochemicals	R5352-ALL	SOP/GOP Index No. = Owner/Operator assumes VOC fugitive control requirements for all components subject to 30 TAC Chapter 115, Subchapter D, Division 3 with no alternate control or control device. Components Utilizing Alternative Work Practice in § 115.358 = No components in the fugitive unit are using the alternative work practice under § 115.358.
VS-93	40 CFR Part 60, Subpart VV	60VV-300-	Produces Chemicals = The fugitive unit is part of a facility that produces as an intermediate or final product one or more of the chemicals listed in 40 CFR § 60.489. Affected Facility = The fugitive unit is part of a facility that is an affected facility as defined in 40 CFR § 60.480(a)(2). Construction/Modification Date = After January 5, 1981 and on or before November 7, 2006. Compliance Option = Choosing to comply with the provisions of 40 CFR Part 60, Subpart VV. Design Capacity = Site with a design capacity is greater than or equal to 1,000 Mg/yr. Produces Heavy Liquid Chemicals = The facility produces chemicals other than or in addition to heavy liquid chemicals only from heavy liquid feed or raw materials. Beverage Alcohol Production = The facility does not produce only beverage alcohol. Equipment in VOC Service = The fugitive unit contains equipment designed to operate in VOC service. Vacuum Service = The fugitive unit does not contain equipment in vacuum service. VOC Service = Fugitive unit contains equipment designed to operate in VOC service less than 300 hours per year.
VS-93	40 CFR Part 60, Subpart VV	60VV-300+	Produces Chemicals = The fugitive unit is part of a facility that produces as an intermediate or final product one or more of the chemicals listed in 40 CFR § 60.489. Affected Facility = The fugitive unit is part of a facility that is an affected facility as defined in 40 CFR § 60.480(a)(2). Construction/Modification Date = After January 5, 1981 and on or before November 7, 2006. Compliance Option = Choosing to comply with the provisions of 40 CFR Part 60, Subpart VV. Design Capacity = Site with a design capacity is greater than or equal to 1,000 Mg/yr. Produces Heavy Liquid Chemicals = The facility produces chemicals other than or in addition to heavy liquid chemicals

			only from heavy liquid feed or raw materials. Beverage Alcohol Production = The facility does not produce only beverage alcohol. Equipment in VOC Service = The fugitive unit contains equipment designed to operate in VOC service. Vacuum Service = The fugitive unit does not contain equipment in vacuum service. VOC Service = Fugitive unit does not contain equipment designed to operate in VOC service less than 300 hours per year. Pumps in Light Liquid Service = The fugitive unit contains pumps in light liquid service. Equivalent Emission Limitation = No equivalent emission limitation is used for pumps in light liquid service. Complying with 40 CFR § 60.482-2 = Pumps in light liquid service are complying with § 60.482-2. Compressors = The fugitive unit contains compressors. Equivalent Emission Limitation = No equivalent emission limitation is used for compressors. Complying with 40 CFR § 60.482-3 = Compressors are complying with § 60.482-3. Pressure Relief Devices in Gas/Vapor Service = The fugitive unit contains pressure relief devices in gas/vapor service. Sampling Connection Systems = The fugitive unit contains sampling connection systems. Equivalent Emission Limitation = No equivalent emission limitation is used for sampling connection systems. Complying with 40 CFR § 60.482-5 = Sampling connection systems are complying with § 60.482-5. Open-ended Valves or Lines = The fugitive unit contains open-ended valves or lines. Equivalent Emission Limitation = No equivalent emission limitation is used for open-ended valves or lines. Complying with 40 CFR § 60.482-6 = Open-ended valves or lines are complying with § 60.482-6. Valves in Gas/Vapor or Light Liquid Service = The fugitive unit contains valves in gas/vapor or light liquid service. 2.0% = The fugitive unit is not complying with an allowable percentage of valves leaking equal to or less than 2.0%. Equivalent Emission Limitation = No equivalent emission limitation is used for valves in gas/vapor or light liquid service. Complying with 40 CFR § 60.482-7 = Valves in gas/vapor or light liquid service are complying with § 60.482-7. Pumps in Heavy Liquid Service = The fugitive unit contains pumps in heavy liquid service. Equivalent Emission Limitation = No equivalent emission limitation is used for pumps in heavy liquid service. Complying with 40 CFR § 60.482-8 = Pumps in heavy liquid service are complying with § 60.482-8. Valves in Heavy Liquid Service = The fugitive unit contains valves in heavy liquid service. Equivalent Emission Limitation = No equivalent emission limitation is used for valves in heavy liquid service. Complying with 40 CFR § 60.482-8 = Valves in heavy liquid service are complying with § 60.482-8. Pressure Relief Devices in Heavy or Light Liquid Service = Fugitive unit contains pressure relief devices in heavy or light liquid service. Equivalent Emission Limitation = No equivalent emission limitation is used for pressure relief devices in heavy or light liquid service. Complying with 40 CFR § 60.482-8 = Pressure relief devices in heavy or light liquid service are complying with the requirements of § 60.482-8. Flanges and Other Connectors = The fugitive unit contains flanges and other connectors. Equivalent Emission Limitation = No equivalent emission limitation is used for flanges and other connectors. Complying with 40 CFR § 60.482-8 = Flanges and other connectors are complying with § 60.482-8. Vapor Recovery System = The fugitive unit does not contain vapor recovery systems. Enclosed Combustion Device = The fugitive unit contains enclosed combustion devices.

			Equivalent Emission Limitation = No equivalent emission limitation is used for enclosed combustion devices. Complying with 40 CFR § 60.482-10 = Enclosed combustion devices are complying with § 60.482-10. Flare = The fugitive unit contains flares. Equivalent Emission Limitation = No equivalent emission limitation is used for flares. Complying with 40 CFR § 60.482-10 = Flares are complying with § 60.482-10. Closed Vent (or Vapor Collection) Systems = The fugitive unit contains closed vent or vapor collection systems. Equivalent Emission Limitation = No equivalent emission limitation is used for closed vent or vapor collection systems. Complying with 40 CFR § 60.482-10 = Closed vent or vapor collection systems are complying with § 60.482-10.
VS-93	40 CFR Part 60, Subpart VV	60VV-VACU	Produces Chemicals = The fugitive unit is part of a facility that produces as an intermediate or final product one or more of the chemicals listed in 40 CFR § 60.489. Affected Facility = The fugitive unit is part of a facility that is an affected facility as defined in 40 CFR § 60.480(a)(2). Construction/Modification Date = After January 5, 1981 and on or before November 7, 2006. Compliance Option = Choosing to comply with the provisions of 40 CFR Part 60, Subpart VV. Design Capacity = Site with a design capacity is greater than or equal to 1,000 Mg/yr. Produces Heavy Liquid Chemicals = The facility produces chemicals other than or in addition to heavy liquid chemicals only from heavy liquid feed or raw materials. Beverage Alcohol Production = The facility does not produce only beverage alcohol. Equipment in VOC Service = The fugitive unit contains equipment designed to operate in VOC service. Vacuum Service = The fugitive unit contains equipment in vacuum service.
VS-93	40 CFR Part 63, Subpart FFFF	63FFFF	Existing Source = Fugitive unit contains equipment in an existing Miscellaneous Chemical Processing Unit.
COOLTOW	30 TAC Chapter 115, HRVOC Cooling Towers	R5761-COOLTOW	Cooling Tower Heat Exchange System Exemptions = The cooling tower heat exchange system does not qualify for an exemption. Alternative Monitoring = Alternative monitoring and testing methods approved by the executive director as allowed in § 115.764(f) are being used. Modified Monitoring = Minor modifications to the monitoring and testing methods approved by the executive director as allowed in § 115.764(f) are being used.
COOLTOW	40 CFR Part 63, Subpart FFFF	63FFFF-COOLTOW2	Monitoring = The cooling water is being monitored for the presence of HAPs or other representative substances that would indicate a leak.
COOLTOW2	30 TAC Chapter 115, HRVOC Cooling Towers	R5761-COOLTOW2	Cooling Tower Heat Exchange System Exemptions = The cooling tower heat exchange system does not qualify for an exemption. Alternative Monitoring = Alternative monitoring and testing methods approved by the executive director as allowed in § 115.764(f) are being used. Modified Monitoring = Minor modifications to the monitoring and testing methods approved by the executive director as allowed in § 115.764(f) are being used.
COOLTOW2	40 CFR Part 63, Subpart FFFF	63FFFF-COOLTOW2	Monitoring = The cooling water is being monitored for the presence of HAPs or other representative substances that would indicate a leak.

VE-801	30 TAC Chapter 115, Water Separation	R5131-FLR2	Alternate Control Requirement = The executive director (or the EPA Administrator) has not approved an ACR or exemption criteria in accordance with 30 TAC § 115.910. Exemption = Water separator does not qualify for exemption. Emission Control Option = Vapor recovery system which satisfies the provisions of 30 TAC § 115.131. Control Device = Control device or vapor recovery system other than a chiller, carbon adsorber, or incinerator.
VE-801	30 TAC Chapter 115, Water Separation	R5131-TOX	Alternate Control Requirement = The executive director (or the EPA Administrator) has not approved an ACR or exemption criteria in accordance with 30 TAC § 115.910. Exemption = Water separator does not qualify for exemption. Emission Control Option = Vapor recovery system which satisfies the provisions of 30 TAC § 115.131. Control Device = Direct flame incinerator.
VE-801	30 TAC Chapter 115, Water Separation	R5131-VS62C	Alternate Control Requirement = The executive director (or the EPA Administrator) has not approved an ACR or exemption criteria in accordance with 30 TAC § 115.910. Exemption = Water separator does not qualify for exemption. Emission Control Option = Vapor recovery system which satisfies the provisions of 30 TAC § 115.131. Control Device = Control device or vapor recovery system other than a chiller, carbon adsorber, or incinerator.
VE-801	40 CFR Part 63, Subpart FFFF	63FFFF-FLR2	Process Wastewater = Oil-Water Separator receives, manages or treats process wastewater as defined in 40 CFR Part 63, Subpart FFFF Unit Category = Oil/water separator complies with 40 CFR § 63.137(a). Control Requirement = Fixed roof and a closed vent system that routes the organic hazardous air pollutant vapors vented from the oil-water separator to a control device. Closed Vent System = Closed vent system is not maintained under negative pressure and is subject to 40 CFR § 63.148. Bypass Lines = Bypass line valves are secured in the closed position with a car-seal or lock-and-key configuration. Combination Of Control Devices = The vent stream is treated using a combination of control devices. Control Devices = Flare. Halogenated = The stream is determined as non-halogenated. Alt 63G Mon Parameters = The EPA Administrator has not approved an alternate monitoring parameter or no alternate has been requested.
VE-801	40 CFR Part 63, Subpart FFFF	63FFFF-TOX	Process Wastewater = Oil-Water Separator receives, manages or treats process wastewater as defined in 40 CFR Part 63, Subpart FFFF Unit Category = Oil/water separator complies with 40 CFR § 63.137(a). Control Requirement = Fixed roof and a closed vent system that routes the organic hazardous air pollutant vapors vented from the oil-water separator to a control device. Closed Vent System = Closed vent system is not maintained under negative pressure and is subject to 40 CFR § 63.148. Bypass Lines = Bypass line valves are secured in the closed position with a car-seal or lock-and-key configuration. Combination Of Control Devices = The vent stream is treated using a combination of control devices. Control Devices = Thermal vapor incinerator. Compliance With 40 CFR § 63.139(c)(1) = The enclosed combustion device being used meets the 95% reduction provisions specified in 40 CFR § 63.139(c)(1)(i). Halogenated = The stream is determined as non-halogenated.

			Alt 63G Mon Parameters = The EPA Administrator has not approved an alternate monitoring parameter or no alternate has been requested. Performance Tests = Performance tests are used to demonstrate that the control device or combination of control devices achieves the appropriate conditions. 2485(h)(3) = The method in 40 CFR § 63.145(i)(2) is used. 95% Performance Tests = The performance tests are conducted to demonstrate compliance with 95% reduction efficiency. Monitoring Options = Control device is using the monitoring parameters specified in Table 13.
VE-801	40 CFR Part 63, Subpart FFFF	63FFFF-VS62C	Process Wastewater = Oil-Water Separator receives, manages or treats process wastewater as defined in 40 CFR Part 63, Subpart FFFF Unit Category = Oil/water separator complies with 40 CFR § 63.137(a). Control Requirement = Fixed roof and a closed vent system that routes the organic hazardous air pollutant vapors vented from the oil-water separator to a control device. Closed Vent System = Closed vent system is not maintained under negative pressure and is subject to 40 CFR § 63.148. Bypass Lines = Bypass line valves are secured in the closed position with a car-seal or lock-and-key configuration. Combination Of Control Devices = The vent stream is treated using a combination of control devices. Control Devices = Flare. Halogenated = The stream is determined as non-halogenated. Alt 63G Mon Parameters = The EPA Administrator has not approved an alternate monitoring parameter or no alternate has been requested.
VS-130P	30 TAC Chapter 115, Water Separation	R5131-FLR2	Alternate Control Requirement = The executive director (or the EPA Administrator) has not approved an ACR or exemption criteria in accordance with 30 TAC § 115.910. Exemption = Water separator does not qualify for exemption. Emission Control Option = Vapor recovery system which satisfies the provisions of 30 TAC § 115.131. Control Device = Control device or vapor recovery system other than a chiller, carbon adsorber, or incinerator.
VS-130P	30 TAC Chapter 115, Water Separation	R5131-TOX	Alternate Control Requirement = The executive director (or the EPA Administrator) has not approved an ACR or exemption criteria in accordance with 30 TAC § 115.910. Exemption = Water separator does not qualify for exemption. Emission Control Option = Vapor recovery system which satisfies the provisions of 30 TAC § 115.131. Control Device = Direct flame incinerator.
VS-130P	30 TAC Chapter 115, Water Separation	R5131-VS62C	Alternate Control Requirement = The executive director (or the EPA Administrator) has not approved an ACR or exemption criteria in accordance with 30 TAC § 115.910. Exemption = Water separator does not qualify for exemption. Emission Control Option = Vapor recovery system which satisfies the provisions of 30 TAC § 115.131. Control Device = Control device or vapor recovery system other than a chiller, carbon adsorber, or incinerator.
VS-130P	40 CFR Part 63, Subpart FFFF	63FFFF-FLR2	Process Wastewater = Oil-Water Separator receives, manages or treats process wastewater as defined in 40 CFR Part 63, Subpart FFFF

			Unit Category = Oil/water separator complies with 40 CFR § 63.137(a). GC1	30 TAC Chapter 115, Vent Gas Controls	R5127-GC1	Chapter 115 Division = The vent stream does not originate from a source for which another Division in 30 TAC Chapter 115 establishes a control requirement, emission specification, or exemption for that source. Combustion Exhaust = The vent stream is not from a combustion unit exhaust or the combustion unit is used as a control device for a vent stream originating from a noncombustion source subject to 30 TAC Chapter 115, Subchapter B, Division 2. Vent Type = Title 30 TAC Chapter 115, Subchapter B, Vent Gas Control rules are applicable and the vent is not specifically classified under the rule. Combined 24-Hour VOC Weight = Combined VOC weight is less than or equal to 100 pounds (45.4 kg). VOC Concentration = VOC concentration is less than 612 ppmv. VOC Concentration/Emission Rate @ Max Operating Conditions = The VOC concentration or emission rate is less than the applicable exemption limit at maximum actual operating conditions and the alternate recordkeeping requirements of 30 TAC § 115.126(4) are being selected. Alternate Control Requirement = Alternate control is not used.
GC2	30 TAC Chapter 115, Vent Gas Controls	R5127-GC2	Chapter 115 Division = The vent stream does not originate from a source for which another Division in 30 TAC Chapter 115 establishes a control requirement, emission specification, or exemption for that source. Combustion Exhaust = The vent stream is not from a combustion unit exhaust or the combustion unit is used as a control device for a vent stream originating from a noncombustion source subject to 30 TAC Chapter 115, Subchapter B, Division 2. Vent Type = Title 30 TAC Chapter 115, Subchapter B, Vent Gas Control rules are applicable and the vent is not specifically classified under the rule. Combined 24-Hour VOC Weight = Combined VOC weight is less than or equal to 100 pounds (45.4 kg). VOC Concentration = VOC concentration is less than 612 ppmv. VOC Concentration/Emission Rate @ Max Operating Conditions = The VOC concentration or emission rate is less than the applicable exemption limit at maximum actual operating conditions and the alternate recordkeeping requirements of 30 TAC § 115.126(4) are being selected. Alternate Control Requirement = Alternate control is not used.
GC3	30 TAC Chapter 115, Vent Gas Controls	R5127-GC3	Chapter 115 Division = The vent stream does not originate from a source for which another Division in 30 TAC Chapter 115 establishes a control requirement, emission specification, or exemption for that source. Combustion Exhaust = The vent stream is not from a combustion unit exhaust or the combustion unit is used as a control device for a vent stream originating from a noncombustion source subject to 30 TAC Chapter 115, Subchapter B, Division 2. Vent Type = Title 30 TAC Chapter 115, Subchapter B, Vent Gas Control rules are applicable and the vent is not specifically classified under the rule. Combined 24-Hour VOC Weight = Combined VOC weight is less than or equal to 100 pounds (45.4 kg). VOC Concentration = VOC concentration is less than 612 ppmv. VOC Concentration/Emission Rate @ Max Operating Conditions = The VOC concentration or emission rate is less than the applicable exemption limit at maximum actual operating conditions and the alternate recordkeeping requirements of 30 TAC § 115.126(4) are being selected.
GRP-NNN	30 TAC Chapter 115,	R5121-FL2	Chapter 115 Division = The vent stream does not originate from a source for which another Division in 30 TAC Chapter 115 establishes a control requirement, emission specification, or exemption for that source.

	Vent Gas Controls		Combustion Exhaust = The vent stream is not from a combustion unit exhaust or the combustion unit is used as a control device for a vent stream originating from a noncombustion source subject to 30 TAC Chapter 115, Subchapter B, Division 2. Vent Type = Vent gas stream originates from a synthetic organic chemical manufacturing industry reactor process or distillation operation, as defined in 30 TAC § 115.10. Alternate Control Requirement = Alternate control is not used. Control Device Type = Smokeless flare Total Design Capacity = Total design capacity is greater than or equal to 1,100 tons per year for all chemicals produced within that unit. Flow Rate or VOC Concentration = Flow rate is greater than or equal to 0.011 scm/min or the VOC concentration is greater than or equal to 500 ppmv. 40 CFR 60 Subpart NNN Requirements = The distillation unit vent gas stream satisfies neither of the following requirements of 40 CFR Part 60, Subpart NNN: TRE index value is greater than 8.0; or TRE index value is greater than 1.0 without the use of VOC emission control devices. 40 CFR 60 Subpart RRR Requirements = The reactor process vent gas stream satisfies neither of the following requirements of 40 CFR Part 60, Subpart RRR: TRE index value is greater than 8.0; or TRE index value is greater than 1.0 without the use of VOC emission control devices.
GRP-NNN	30 TAC Chapter 115, Vent Gas Controls	R5121-TOX	Chapter 115 Division = The vent stream does not originate from a source for which another Division in 30 TAC Chapter 115 establishes a control requirement, emission specification, or exemption for that source. Combustion Exhaust = The vent stream is not from a combustion unit exhaust or the combustion unit is used as a control device for a vent stream originating from a noncombustion source subject to 30 TAC Chapter 115, Subchapter B, Division 2. Vent Type = Vent gas stream originates from a synthetic organic chemical manufacturing industry reactor process or distillation operation, as defined in 30 TAC § 115.10. Alternate Control Requirement = Alternate control is not used. Control Device Type = Direct flame incinerator in which the vent gas stream is burned at a temperature or at least 1300° F (704 C). Total Design Capacity = Total design capacity is greater than or equal to 1,100 tons per year for all chemicals produced within that unit. Flow Rate or VOC Concentration = Flow rate is greater than or equal to 0.011 scm/min or the VOC concentration is greater than or equal to 500 ppmv. 40 CFR 60 Subpart NNN Requirements = The distillation unit vent gas stream satisfies neither of the following requirements of 40 CFR Part 60, Subpart NNN: TRE index value is greater than 8.0; or TRE index value is greater than 1.0 without the use of VOC emission control devices. 40 CFR 60 Subpart RRR Requirements = The reactor process vent gas stream satisfies neither of the following requirements of 40 CFR Part 60, Subpart RRR: TRE index value is greater than 8.0; or TRE index value is greater than 1.0 without the use of VOC emission control devices.
GRP-NNN	30 TAC Chapter 115, Vent Gas Controls	R5121-VS62C	Chapter 115 Division = The vent stream does not originate from a source for which another Division in 30 TAC Chapter 115 establishes a control requirement, emission specification, or exemption for that source. Combustion Exhaust = The vent stream is not from a combustion unit exhaust or the combustion unit is used as a control device for a vent stream originating from a noncombustion source subject to 30 TAC Chapter 115, Subchapter B, Division 2. Vent Type = Vent gas stream originates from a synthetic organic chemical manufacturing industry reactor process or distillation operation, as defined in 30 TAC § 115.10.

			Alternate Control Requirement = Alternate control is not used. Control Device Type = Smokeless flare Total Design Capacity = Total design capacity is greater than or equal to 1,100 tons per year for all chemicals produced within that unit. Flow Rate or VOC Concentration = Flow rate is greater than or equal to 0.011 scm/min or the VOC concentration is greater than or equal to 500 ppmv. 40 CFR 60 Subpart NNN Requirements = The distillation unit vent gas stream satisfies neither of the following requirements of 40 CFR Part 60, Subpart NNN: TRE index value is greater than 8.0; or TRE index value is greater than 1.0 without the use of VOC emission control devices. 40 CFR 60 Subpart RRR Requirements = The reactor process vent gas stream satisfies neither of the following requirements of 40 CFR Part 60, Subpart RRR: TRE index value is greater than 8.0; or TRE index value is greater than 1.0 without the use of VOC emission control devices.
GRP-NNN	40 CFR Part 63, Subpart FFFF	63FFFF-3NFL2	Emission Standard = The TRE index is not maintained above the threshold (5.0 for a new source and 1.9 for an existing source) and a flare is being used for control. Designated Grp1 = The emission stream is designated as Group 1. Designated Hal = The emission stream is not designated as halogenated. Determined Hal = The emission stream is determined to be non-halogenated. Prior Eval = The data from a prior evaluation or assessment is used. Negative Pressure = The closed vent system is operated and maintained at or above atmospheric pressure. Bypass Line = Bypass line valves are secured in the closed position with a car-seal or lock-and-key configuration.
GRP-NNN	40 CFR Part 63, Subpart FFFF	63FFFF-3NTOX	Emission Standard = The TRE index is not maintained above the threshold (5.0 for a new source and 1.9 for an existing source) and a non-flare CD is being used to meet 98% reduction per § 63.2455(a) - Table 1.1.a.i. Designated Grp1 = The emission stream is designated as Group 1. Small Device = A small control device (defined in § 63.2550) is not being used. Alt 63SS Mon Parameters = Alternate monitoring parameters or requirements have not been approved by the Administrator or have not been requested. CEMS = A CEMS is not used. SS Device Type = Incinerator other than a catalytic incinerator. Meets 63.988(b)(2) = The control device does not meet the criteria in § 63.985(b)(2). Designated Hal = The emission stream is not designated as halogenated. Determined Hal = The emission stream is determined to be non-halogenated. Hal Device Type = No halogen scrubber or other halogen reduction device is used. Prior Eval = The data from a prior evaluation or assessment is used. Formaldehyde = The stream does not contain formaldehyde. Negative Pressure = The closed vent system is operated and maintained at or above atmospheric pressure. Bypass Line = Bypass line valves are secured in the closed position with a car-seal or lock-and-key configuration.
GRP-NNN	40 CFR Part 63, Subpart FFFF	63FFFF-3NVS62C	Emission Standard = The TRE index is not maintained above the threshold (5.0 for a new source and 1.9 for an existing source) and a flare is being used for control. Designated Grp1 = The emission stream is designated as Group 1. Designated Hal = The emission stream is not designated as halogenated.

			Determined Hal = The emission stream is determined to be non-halogenated. Prior Eval = The data from a prior evaluation or assessment is used. Negative Pressure = The closed vent system is operated and maintained at or above atmospheric pressure. Bypass Line = Bypass line valves are secured in the closed position with a car-seal or lock-and-key configuration.
GRP-RRR	30 TAC Chapter 115, Vent Gas Controls	R5121-FL2	Chapter 115 Division = The vent stream does not originate from a source for which another Division in 30 TAC Chapter 115 establishes a control requirement, emission specification, or exemption for that source. Combustion Exhaust = The vent stream is not from a combustion unit exhaust or the combustion unit is used as a control device for a vent stream originating from a noncombustion source subject to 30 TAC Chapter 115, Subchapter B, Division 2. Designated Hal = The emission stream is not designated as halogenated. Determined Hal = The emission stream is determined to be non-halogenated. Hal Device Type = No halogen scrubber or other halogen reduction device is used. Prior Eval = The data from a prior evaluation or assessment is used. Formaldehyde = The stream does not contain formaldehyde. Negative Pressure = The closed vent system is operated and maintained under negative pressure.
L2-WBATH	30 TAC Chapter 115, Vent Gas Controls	R5121-RTO	Chapter 115 Division = The vent stream does not originate from a source for which another Division in 30 TAC Chapter 115 establishes a control requirement, emission specification, or exemption for that source. Combustion Exhaust = The vent stream is not from a combustion unit exhaust or the combustion unit is used as a control device for a vent stream originating from a noncombustion source subject to 30 TAC Chapter 115, Subchapter B, Division 2. Vent Type = Title 30 TAC Chapter 115, Subchapter B, Vent Gas Control rules are applicable and the vent is not specifically classified under the rule. Alternate Control Requirement = Alternate control is not used. Control Device Type = Direct flame incinerator in which the vent gas stream is burned at a temperature or at least 1300° F (704 C).
L2-WBATH	40 CFR Part 63, Subpart FFFF	63FFFF-RTOX	Emission Standard = The TRE index is not maintained above the threshold (5.0 for a new source and 1.9 for an existing source) and a non-flare CD is being used to meet 98% reduction per § 63.2455(a) - Table 1.1.a.i. Designated Grp1 = The emission stream is designated as Group 1. Small Device = A small control device (defined in § 63.2550) is not being used. Alt 63SS Mon Parameters = Alternate monitoring parameters or requirements have not been approved by the Administrator or have not been requested. CEMS = A CEMS is not used. SS Device Type = Incinerator other than a catalytic incinerator. Meets 63.988(b)(2) = The control device does not meet the criteria in § 63.985(b)(2). Designated Hal = The emission stream is not designated as halogenated. Determined Hal = The emission stream is determined to be non-halogenated.

			Hal Device Type = No halogen scrubber or other halogen reduction device is used. Prior Eval = The data from a prior evaluation or assessment is used. Formaldehyde = The stream does not contain formaldehyde. Negative Pressure = The closed vent system is operated and maintained under negative pressure.
L3-136P-3	30 TAC Chapter 115, Vent Gas Controls	R5127-L3-136P-3	Chapter 115 Division = The vent stream does not originate from a source for which another Division in 30 TAC Chapter 115 establishes a control requirement, emission specification, or exemption for that source. Combustion Exhaust = The vent stream is not from a combustion unit exhaust or the combustion unit is used as a control device for a vent stream originating from a noncombustion source subject to 30 TAC Chapter 115, Subchapter B, Division 2. Vent Type = Title 30 TAC Chapter 115, Subchapter B, Vent Gas Control rules are applicable and the vent is not specifically classified under the rule. Combined 24-Hour VOC Weight = Combined VOC weight is less than or equal to 100 pounds (45.4 kg). VOC Concentration = VOC concentration is less than 612 ppmv. VOC Concentration/Emission Rate @ Max Operating Conditions = The VOC concentration or emission rate is less than the applicable exemption limit at maximum actual operating conditions and the alternate recordkeeping requirements of 30 TAC § 115.126(4) are being selected.
L3-136P-3	40 CFR Part 63, Subpart FFFF	63FFFF-136P3	Emission Standard = The vent stream is Group 2 (not designated as Group 1 and determined to not be Group 1). Recovery Device = The TRE index is maintained without a recovery device.
L3-26T-3	30 TAC Chapter 115, Vent Gas Controls	R5121-FL2	Chapter 115 Division = The vent stream does not originate from a source for which another Division in 30 TAC Chapter 115 establishes a control requirement, emission specification, or exemption for that source. Combustion Exhaust = The vent stream is not from a combustion unit exhaust or the combustion unit is used as a control device for a vent stream originating from a noncombustion source subject to 30 TAC Chapter 115, Subchapter B, Division 2. Vent Type = Title 30 TAC Chapter 115, Subchapter B, Vent Gas Control rules are applicable and the vent is not specifically classified under the rule. Alternate Control Requirement = Alternate control is not used. Control Device Type = Smokeless flare
L3-26T-3	30 TAC Chapter 115, Vent Gas Controls	R5121-TOX	Chapter 115 Division = The vent stream does not originate from a source for which another Division in 30 TAC Chapter 115 establishes a control requirement, emission specification, or exemption for that source. Combustion Exhaust = The vent stream is not from a combustion unit exhaust or the combustion unit is used as a control device for a vent stream originating from a noncombustion source subject to 30 TAC Chapter 115, Subchapter B, Division 2. Vent Type = Title 30 TAC Chapter 115, Subchapter B, Vent Gas Control rules are applicable and the vent is not specifically classified under the rule. Alternate Control Requirement = Alternate control is not used. Control Device Type = Direct flame incinerator in which the vent gas stream is burned at a temperature or at least 1300° F (704 C).
L3-26T-3	30 TAC Chapter 115, Vent Gas Controls	R5121-VS62C	Chapter 115 Division = The vent stream does not originate from a source for which another Division in 30 TAC Chapter 115 establishes a control requirement, emission specification, or exemption for that source. Combustion Exhaust = The vent stream is not from a combustion unit exhaust or the combustion unit is used as a control

			device for a vent stream originating from a noncombustion source subject to 30 TAC Chapter 115, Subchapter B, Division 2. Vent Type = Title 30 TAC Chapter 115, Subchapter B, Vent Gas Control rules are applicable and the vent is not specifically classified under the rule. Alternate Control Requirement = Alternate control is not used. Control Device Type = Smokeless flare
L3-28T-3	30 TAC Chapter 115, Vent Gas Controls	R5121-FL2	Chapter 115 Division = The vent stream does not originate from a source for which another Division in 30 TAC Chapter 115 establishes a control requirement, emission specification, or exemption for that source. Combustion Exhaust = The vent stream is not from a combustion unit exhaust or the combustion unit is used as a control device for a vent stream originating from a noncombustion source subject to 30 TAC Chapter 115, Subchapter B, Division 2. Vent Type = Title 30 TAC Chapter 115, Subchapter B, Vent Gas Control rules are applicable and the vent is not specifically classified under the rule. Alternate Control Requirement = Alternate control is not used. Control Device Type = Smokeless flare
L3-28T-3	30 TAC Chapter 115, Vent Gas Controls	R5121-TOX	Chapter 115 Division = The vent stream does not originate from a source for which another Division in 30 TAC Chapter 115 establishes a control requirement, emission specification, or exemption for that source. Combustion Exhaust = The vent stream is not from a combustion unit exhaust or the combustion unit is used as a control device for a vent stream originating from a noncombustion source subject to 30 TAC Chapter 115, Subchapter B, Division 2. Vent Type = Title 30 TAC Chapter 115, Subchapter B, Vent Gas Control rules are applicable and the vent is not specifically classified under the rule. Alternate Control Requirement = Alternate control is not used. Control Device Type = Direct flame incinerator in which the vent gas stream is burned at a temperature or at least 1300° F (704 C).
L3-28T-3	30 TAC Chapter 115, Vent Gas Controls	R5121-VS62C	Chapter 115 Division = The vent stream does not originate from a source for which another Division in 30 TAC Chapter 115 establishes a control requirement, emission specification, or exemption for that source. Combustion Exhaust = The vent stream is not from a combustion unit exhaust or the combustion unit is used as a control device for a vent stream originating from a noncombustion source subject to 30 TAC Chapter 115, Subchapter B, Division 2. Vent Type = Title 30 TAC Chapter 115, Subchapter B, Vent Gas Control rules are applicable and the vent is not specifically classified under the rule. Alternate Control Requirement = Alternate control is not used. Control Device Type = Smokeless flare
L3-37T-3	30 TAC Chapter 115, Vent Gas Controls	R5127-L3-37T-3	Chapter 115 Division = The vent stream does not originate from a source for which another Division in 30 TAC Chapter 115 establishes a control requirement, emission specification, or exemption for that source. Combustion Exhaust = The vent stream is not from a combustion unit exhaust or the combustion unit is used as a control device for a vent stream originating from a noncombustion source subject to 30 TAC Chapter 115, Subchapter B, Division 2. Vent Type = Title 30 TAC Chapter 115, Subchapter B, Vent Gas Control rules are applicable and the vent is not specifically classified under the rule. Combined 24-Hour VOC Weight = Combined VOC weight is less than or equal to 100 pounds (45.4 kg).

			VOC Concentration = VOC concentration is less than 612 ppmv. VOC Concentration/Emission Rate @ Max Operating Conditions = The VOC concentration or emission rate is less than the applicable exemption limit at maximum actual operating conditions and the alternate recordkeeping requirements of 30 TAC § 115.126(4) are being selected.
L3-45T-3	30 TAC Chapter 115, Vent Gas Controls	R5127-L3-45T-3	Chapter 115 Division = The vent stream does not originate from a source for which another Division in 30 TAC Chapter 115 establishes a control requirement, emission specification, or exemption for that source. Combustion Exhaust = The vent stream is not from a combustion unit exhaust or the combustion unit is used as a control device for a vent stream originating from a noncombustion source subject to 30 TAC Chapter 115, Subchapter B, Division 2. Vent Type = Title 30 TAC Chapter 115, Subchapter B, Vent Gas Control rules are applicable and the vent is not specifically classified under the rule. Combined 24-Hour VOC Weight = Combined VOC weight is less than or equal to 100 pounds (45.4 kg). VOC Concentration = VOC concentration is less than 612 ppmv. VOC Concentration/Emission Rate @ Max Operating Conditions = The VOC concentration or emission rate is less than the applicable exemption limit at maximum actual operating conditions and the alternate recordkeeping requirements of 30 TAC § 115.126(4) are being selected.
L3-68-3	30 TAC Chapter 115, Vent Gas Controls	R5127-L3683	Chapter 115 Division = The vent stream does not originate from a source for which another Division in 30 TAC Chapter 115 establishes a control requirement, emission specification, or exemption for that source. Combustion Exhaust = The vent stream is not from a combustion unit exhaust or the combustion unit is used as a control device for a vent stream originating from a noncombustion source subject to 30 TAC Chapter 115, Subchapter B, Division 2. Vent Type = Title 30 TAC Chapter 115, Subchapter B, Vent Gas Control rules are applicable and the vent is not specifically classified under the rule. Combined 24-Hour VOC Weight = Combined VOC weight is less than or equal to 100 pounds (45.4 kg). VOC Concentration = VOC concentration is less than 612 ppmv. VOC Concentration/Emission Rate @ Max Operating Conditions = The VOC concentration or emission rate is less than the applicable exemption limit at maximum actual operating conditions and the alternate recordkeeping requirements of 30 TAC § 115.126(4) are being selected.
L3-72-3	30 TAC Chapter 115, Vent Gas Controls	R5127-L372	Chapter 115 Division = The vent stream does not originate from a source for which another Division in 30 TAC Chapter 115 establishes a control requirement, emission specification, or exemption for that source. Combustion Exhaust = The vent stream is not from a combustion unit exhaust or the combustion unit is used as a control device for a vent stream originating from a noncombustion source subject to 30 TAC Chapter 115, Subchapter B, Division 2. Vent Type = Title 30 TAC Chapter 115, Subchapter B, Vent Gas Control rules are applicable and the vent is not specifically classified under the rule. Combined 24-Hour VOC Weight = Combined VOC weight is less than or equal to 100 pounds (45.4 kg). VOC Concentration = VOC concentration is less than 612 ppmv. VOC Concentration/Emission Rate @ Max Operating Conditions = The VOC concentration or emission rate is less than the applicable exemption limit at maximum actual operating conditions and the alternate recordkeeping requirements of 30 TAC § 115.126(4) are being selected.
L3-78-3	30 TAC Chapter 115,	R5127-L378-3	Chapter 115 Division = The vent stream does not originate from a source for which another Division in 30 TAC Chapter 115 establishes a control requirement, emission specification, or exemption for that source.

	Vent Gas Controls		Combustion Exhaust = The vent stream is not from a combustion unit exhaust or the combustion unit is used as a control device for a vent stream originating from a noncombustion source subject to 30 TAC Chapter 115, Subchapter B, Division 2. Vent Type = Title 30 TAC Chapter 115, Subchapter B, Vent Gas Control rules are applicable and the vent is not specifically classified under the rule. Combined 24-Hour VOC Weight = Combined VOC weight is less than or equal to 100 pounds (45.4 kg). VOC Concentration = VOC concentration is less than 612 ppmv. VOC Concentration/Emission Rate @ Max Operating Conditions = The VOC concentration or emission rate is less than the applicable exemption limit at maximum actual operating conditions and the alternate recordkeeping requirements of 30 TAC § 115.126(4) are being selected.
L3-WBATH	30 TAC Chapter 115, Vent Gas Controls	R5121-RTO	Chapter 115 Division = The vent stream does not originate from a source for which another Division in 30 TAC Chapter 115 establishes a control requirement, emission specification, or exemption for that source. Combustion Exhaust = The vent stream is not from a combustion unit exhaust or the combustion unit is used as a control device for a vent stream originating from a noncombustion source subject to 30 TAC Chapter 115, Subchapter B, Division 2. Vent Type = Title 30 TAC Chapter 115, Subchapter B, Vent Gas Control rules are applicable and the vent is not specifically classified under the rule. Alternate Control Requirement = Alternate control is not used. Control Device Type = Direct flame incinerator in which the vent gas stream is burned at a temperature or at least 1300° F (704 C).
L3-WBATH	40 CFR Part 63, Subpart FFFF	63FFFF-RTOX	Emission Standard = The TRE index is not maintained above the threshold (5.0 for a new source and 1.9 for an existing source) and a non-flare CD is being used to meet 98% reduction per § 63.2455(a) - Table 1.1.a.i. Designated Grp1 = The emission stream is designated as Group 1. Small Device = A small control device (defined in § 63.2550) is not being used. Alt 63SS Mon Parameters = Alternate monitoring parameters or requirements have not been approved by the Administrator or have not been requested. CEMS = A CEMS is not used. SS Device Type = Incinerator other than a catalytic incinerator. Meets 63.988(b)(2) = The control device does not meet the criteria in § 63.985(b)(2). Designated Hal = The emission stream is not designated as halogenated. Determined Hal = The emission stream is determined to be non-halogenated. Hal Device Type = No halogen scrubber or other halogen reduction device is used. Prior Eval = The data from a prior evaluation or assessment is used. Formaldehyde = The stream does not contain formaldehyde. Negative Pressure = The closed vent system is operated and maintained under negative pressure.
RES-1	30 TAC Chapter 115, Vent Gas Controls	R5121-FL2	Chapter 115 Division = The vent stream does not originate from a source for which another Division in 30 TAC Chapter 115 establishes a control requirement, emission specification, or exemption for that source. Combustion Exhaust = The vent stream is not from a combustion unit exhaust or the combustion unit is used as a control device for a vent stream originating from a noncombustion source subject to 30 TAC Chapter 115, Subchapter B, Division 2.

			Vent Type = Title 30 TAC Chapter 115, Subchapter B, Vent Gas Control rules are applicable and the vent is not specifically classified under the rule. Alternate Control Requirement = Alternate control is not used. Control Device Type = Smokeless flare

VE-020	30 TAC Chapter 115, Vent Gas Controls	R5127-VE020	Chapter 115 Division = The vent stream does not originate from a source for which another Division in 30 TAC Chapter 115 establishes a control requirement, emission specification, or exemption for that source. Combustion Exhaust = The vent stream is not from a combustion unit exhaust or the combustion unit is used as a control device for a vent stream originating from a noncombustion source subject to 30 TAC Chapter 115, Subchapter B, Division 2. Vent Type = Title 30 TAC Chapter 115, Subchapter B, Vent Gas Control rules are applicable and the vent is not specifically classified under the rule. Combined 24-Hour VOC Weight = Combined VOC weight is less than or equal to 100 pounds (45.4 kg). VOC Concentration = VOC concentration is less than 612 ppmv. VOC Concentration/Emission Rate @ Max Operating Conditions = The VOC concentration or emission rate is less than the applicable exemption limit at maximum actual operating conditions and the alternate recordkeeping requirements of 30 TAC § 115.126(4) are being selected.
VE-020	40 CFR Part 63, Subpart FFFF	63FFFF-VE020	Emission Standard = The vent stream is Group 2 (not designated as Group 1 and determined to not be Group 1). Recovery Device = The TRE index is maintained without a recovery device.
VE-025	30 TAC Chapter 115, Vent Gas Controls	R5127-VE025	Chapter 115 Division = The vent stream does not originate from a source for which another Division in 30 TAC Chapter 115 establishes a control requirement, emission specification, or exemption for that source. Combustion Exhaust = The vent stream is not from a combustion unit exhaust or the combustion unit is used as a control device for a vent stream originating from a noncombustion source subject to 30 TAC Chapter 115, Subchapter B, Division 2. Vent Type = Title 30 TAC Chapter 115, Subchapter B, Vent Gas Control rules are applicable and the vent is not specifically classified under the rule.

			Combined 24-Hour VOC Weight = Combined VOC weight is less than or equal to 100 pounds (45.4 kg). VOC Concentration = VOC concentration is less than 612 ppmv. VOC Concentration/Emission Rate @ Max Operating Conditions = The VOC concentration or emission rate is less than the applicable exemption limit at maximum actual operating conditions and the alternate recordkeeping requirements of 30 TAC § 115.126(4) are being selected.
VE-025	40 CFR Part 63, Subpart FFFF	63FFFF-VE025	Emission Standard = The vent stream is Group 2 (not designated as Group 1 and determined to not be Group 1). Recovery Device = The TRE index is maintained without a recovery device.
VE-101	30 TAC Chapter 115, Vent Gas Controls	R5121-FL2	Chapter 115 Division = The vent stream does not originate from a source for which another Division in 30 TAC Chapter 115 establishes a control requirement, emission specification, or exemption for that source. Combustion Exhaust = The vent stream is not from a combustion unit exhaust or the combustion unit is used as a control device for a vent stream originating from a noncombustion source subject to 30 TAC Chapter 115, Subchapter B, Division 2. Vent Type = Title 30 TAC Chapter 115, Subchapter B, Vent Gas Control rules are applicable and the vent is not specifically classified under the rule. Alternate Control Requirement = Alternate control is not used. Control Device Type = Smokeless flare
VE-101	30 TAC Chapter 115, Vent Gas Controls	R5121-TOX	Chapter 115 Division = The vent stream does not originate from a source for which another Division in 30 TAC Chapter 115 establishes a control requirement, emission specification, or exemption for that source. Combustion Exhaust = The vent stream is not from a combustion unit exhaust or the combustion unit is used as a control device for a vent stream originating from a noncombustion source subject to 30 TAC Chapter 115, Subchapter B, Division 2. Vent Type = Title 30 TAC Chapter 115, Subchapter B, Vent Gas Control rules are applicable and the vent is not specifically classified under the rule. Alternate Control Requirement = Alternate control is not used. Control Device Type = Direct flame incinerator in which the vent gas stream is burned at a temperature or at least 1300° F (704 C).
VE-101	30 TAC Chapter 115, Vent Gas Controls	R5121-VS62C	Chapter 115 Division = The vent stream does not originate from a source for which another Division in 30 TAC Chapter 115 establishes a control requirement, emission specification, or exemption for that source. Combustion Exhaust = The vent stream is not from a combustion unit exhaust or the combustion unit is used as a control device for a vent stream originating from a noncombustion source subject to 30 TAC Chapter 115, Subchapter B, Division 2. Vent Type = Title 30 TAC Chapter 115, Subchapter B, Vent Gas Control rules are applicable and the vent is not specifically classified under the rule. Alternate Control Requirement = Alternate control is not used. Control Device Type = Smokeless flare
VE-102	30 TAC Chapter 115, Vent Gas Controls	R5121-FL2	Chapter 115 Division = The vent stream does not originate from a source for which another Division in 30 TAC Chapter 115 establishes a control requirement, emission specification, or exemption for that source. Combustion Exhaust = The vent stream is not from a combustion unit exhaust or the combustion unit is used as a control device for a vent stream originating from a noncombustion source subject to 30 TAC Chapter 115, Subchapter B, Division 2. Vent Type = Title 30 TAC Chapter 115, Subchapter B, Vent Gas Control rules are applicable and the vent is not specifically classified under the rule.

			Alternate Control Requirement = Alternate control is not used. Control Device Type = Smokeless flare
VE-102	30 TAC Chapter 115, Vent Gas Controls	R5121-TOX	Chapter 115 Division = The vent stream does not originate from a source for which another Division in 30 TAC Chapter 115 establishes a control requirement, emission specification, or exemption for that source. Combustion Exhaust = The vent stream is not from a combustion unit exhaust or the combustion unit is used as a control device for a vent stream originating from a noncombustion source subject to 30 TAC Chapter 115, Subchapter B, Division 2. Vent Type = Title 30 TAC Chapter 115, Subchapter B, Vent Gas Control rules are applicable and the vent is not specifically classified under the rule. Alternate Control Requirement = Alternate control is not used. Control Device Type = Direct flame incinerator in which the vent gas stream is burned at a temperature or at least 1300° F (704 C).
VE-102	30 TAC Chapter 115, Vent Gas Controls	R5121-VS62C	Chapter 115 Division = The vent stream does not originate from a source for which another Division in 30 TAC Chapter 115 establishes a control requirement, emission specification, or exemption for that source. Combustion Exhaust = The vent stream is not from a combustion unit exhaust or the combustion unit is used as a control device for a vent stream originating from a noncombustion source subject to 30 TAC Chapter 115, Subchapter B, Division 2. Vent Type = Title 30 TAC Chapter 115, Subchapter B, Vent Gas Control rules are applicable and the vent is not specifically classified under the rule. Alternate Control Requirement = Alternate control is not used. Control Device Type = Smokeless flare
VE-170	30 TAC Chapter 115, Vent Gas Controls	R5121-FL2	Chapter 115 Division = The vent stream does not originate from a source for which another Division in 30 TAC Chapter 115 establishes a control requirement, emission specification, or exemption for that source. Combustion Exhaust = The vent stream is not from a combustion unit exhaust or the combustion unit is used as a control device for a vent stream originating from a noncombustion source subject to 30 TAC Chapter 115, Subchapter B, Division 2. Vent Type = Title 30 TAC Chapter 115, Subchapter B, Vent Gas Control rules are applicable and the vent is not specifically classified under the rule. Alternate Control Requirement = Alternate control is not used. Control Device Type = Smokeless flare
VE-170	30 TAC Chapter 115, Vent Gas Controls	R5121-TOX	Chapter 115 Division = The vent stream does not originate from a source for which another Division in 30 TAC Chapter 115 establishes a control requirement, emission specification, or exemption for that source. Combustion Exhaust = The vent stream is not from a combustion unit exhaust or the combustion unit is used as a control device for a vent stream originating from a noncombustion source subject to 30 TAC Chapter 115, Subchapter B, Division 2. Vent Type = Title 30 TAC Chapter 115, Subchapter B, Vent Gas Control rules are applicable and the vent is not specifically classified under the rule. Alternate Control Requirement = Alternate control is not used. Control Device Type = Direct flame incinerator in which the vent gas stream is burned at a temperature or at least 1300° F (704 C).
VE-170	30 TAC Chapter 115,	R5121-VS62C	Chapter 115 Division = The vent stream does not originate from a source for which another Division in 30 TAC Chapter 115 establishes a control requirement, emission specification, or exemption for that source.

	Vent Gas Controls		Combustion Exhaust = The vent stream is not from a combustion unit exhaust or the combustion unit is used as a control device for a vent stream originating from a noncombustion source subject to 30 TAC Chapter 115, Subchapter B, Division 2. Vent Type = Title 30 TAC Chapter 115, Subchapter B, Vent Gas Control rules are applicable and the vent is not specifically classified under the rule. Alternate Control Requirement = Alternate control is not used. Control Device Type = Smokeless flare
VE-171	30 TAC Chapter 115, Vent Gas Controls	R5121-FL2	Chapter 115 Division = The vent stream does not originate from a source for which another Division in 30 TAC Chapter 115 establishes a control requirement, emission specification, or exemption for that source. Combustion Exhaust = The vent stream is not from a combustion unit exhaust or the combustion unit is used as a control device for a vent stream originating from a noncombustion source subject to 30 TAC Chapter 115, Subchapter B, Division 2. Vent Type = Title 30 TAC Chapter 115, Subchapter B, Vent Gas Control rules are applicable and the vent is not specifically classified under the rule. Alternate Control Requirement = Alternate control is not used. Control Device Type = Smokeless flare
VE-171	30 TAC Chapter 115, Vent Gas Controls	R5121-TOX	Chapter 115 Division = The vent stream does not originate from a source for which another Division in 30 TAC Chapter 115 establishes a control requirement, emission specification, or exemption for that source. Combustion Exhaust = The vent stream is not from a combustion unit exhaust or the combustion unit is used as a control device for a vent stream originating from a noncombustion source subject to 30 TAC Chapter 115, Subchapter B, Division 2. Vent Type = Title 30 TAC Chapter 115, Subchapter B, Vent Gas Control rules are applicable and the vent is not specifically classified under the rule. Alternate Control Requirement = Alternate control is not used. Control Device Type = Direct flame incinerator in which the vent gas stream is burned at a temperature or at least 1300° F (704 C).
VE-171	30 TAC Chapter 115, Vent Gas Controls	R5121-VS62C	Chapter 115 Division = The vent stream does not originate from a source for which another Division in 30 TAC Chapter 115 establishes a control requirement, emission specification, or exemption for that source. Combustion Exhaust = The vent stream is not from a combustion unit exhaust or the combustion unit is used as a control device for a vent stream originating from a noncombustion source subject to 30 TAC Chapter 115, Subchapter B, Division 2. Vent Type = Title 30 TAC Chapter 115, Subchapter B, Vent Gas Control rules are applicable and the vent is not specifically classified under the rule. Alternate Control Requirement = Alternate control is not used. Control Device Type = Smokeless flare
VE-401	30 TAC Chapter 115, Vent Gas Controls	R5121-FL2	Chapter 115 Division = The vent stream does not originate from a source for which another Division in 30 TAC Chapter 115 establishes a control requirement, emission specification, or exemption for that source. Combustion Exhaust = The vent stream is not from a combustion unit exhaust or the combustion unit is used as a control device for a vent stream originating from a noncombustion source subject to 30 TAC Chapter 115, Subchapter B, Division 2. Vent Type = Title 30 TAC Chapter 115, Subchapter B, Vent Gas Control rules are applicable and the vent is not specifically classified under the rule. Alternate Control Requirement = Alternate control is not used.

			Control Device Type = Smokeless flare
VE-401	30 TAC Chapter 115, Vent Gas Controls	R5121-TOX	Chapter 115 Division = The vent stream does not originate from a source for which another Division in 30 TAC Chapter 115 establishes a control requirement, emission specification, or exemption for that source. Combustion Exhaust = The vent stream is not from a combustion unit exhaust or the combustion unit is used as a control device for a vent stream originating from a noncombustion source subject to 30 TAC Chapter 115, Subchapter B, Division 2. Vent Type = Title 30 TAC Chapter 115, Subchapter B, Vent Gas Control rules are applicable and the vent is not specifically classified under the rule. Alternate Control Requirement = Alternate control is not used. Control Device Type = Direct flame incinerator in which the vent gas stream is burned at a temperature or at least 1300° F (704 C).
VE-401	30 TAC Chapter 115, Vent Gas Controls	R5121-VS62C	Chapter 115 Division = The vent stream does not originate from a source for which another Division in 30 TAC Chapter 115 establishes a control requirement, emission specification, or exemption for that source. Combustion Exhaust = The vent stream is not from a combustion unit exhaust or the combustion unit is used as a control device for a vent stream originating from a noncombustion source subject to 30 TAC Chapter 115, Subchapter B, Division 2. Vent Type = Title 30 TAC Chapter 115, Subchapter B, Vent Gas Control rules are applicable and the vent is not specifically classified under the rule. Alternate Control Requirement = Alternate control is not used. Control Device Type = Smokeless flare
VE-450	30 TAC Chapter 115, Vent Gas Controls	R5127-VE450	Chapter 115 Division = The vent stream does not originate from a source for which another Division in 30 TAC Chapter 115 establishes a control requirement, emission specification, or exemption for that source. Combustion Exhaust = The vent stream is not from a combustion unit exhaust or the combustion unit is used as a control device for a vent stream originating from a noncombustion source subject to 30 TAC Chapter 115, Subchapter B, Division 2. Vent Type = Title 30 TAC Chapter 115, Subchapter B, Vent Gas Control rules are applicable and the vent is not specifically classified under the rule. Combined 24-Hour VOC Weight = Combined VOC weight is less than or equal to 100 pounds (45.4 kg). VOC Concentration = VOC concentration is less than 612 ppmv. VOC Concentration/Emission Rate @ Max Operating Conditions = The VOC concentration or emission rate is less than the applicable exemption limit at maximum actual operating conditions and the alternate recordkeeping requirements of 30 TAC § 115.126(4) are being selected.
VE-451	30 TAC Chapter 115, Vent Gas Controls	R5121-RTO	Chapter 115 Division = The vent stream does not originate from a source for which another Division in 30 TAC Chapter 115 establishes a control requirement, emission specification, or exemption for that source. Combustion Exhaust = The vent stream is not from a combustion unit exhaust or the combustion unit is used as a control device for a vent stream originating from a noncombustion source subject to 30 TAC Chapter 115, Subchapter B, Division 2. Vent Type = Title 30 TAC Chapter 115, Subchapter B, Vent Gas Control rules are applicable and the vent is not specifically classified under the rule. Alternate Control Requirement = Alternate control is not used. Control Device Type = Direct flame incinerator in which the vent gas stream is burned at a temperature or at least 1300° F (704 C).

Combustion Exhaust = The vent stream is not from a combustion unit exhaust or the combustion unit is used as a control device for a vent stream originating from a noncombustion source subject to 30 TAC Chapter 115, Subchapter B, Division 2. Vent Type = Title 30 TAC Chapter 115, Subchapter B, Vent Gas Control rules are applicable and the vent is not specifically classified under the rule. Combined 24-Hour VOC Weight = Combined VOC weight is less than or equal to 100 pounds (45.4 kg). VOC Concentration = VOC concentration is less than 612 ppmv. VOC Concentration/Emission Rate @ Max Operating Conditions = The VOC concentration or emission rate is less than the applicable exemption limit at maximum actual operating conditions and the alternate recordkeeping requirements of 30 TAC § 115.126(4) are being selected.
VS-136P-1	40 CFR Part 63, Subpart FFFF	63FFFF-VS136P1	Emission Standard = The vent stream is Group 2 (not designated as Group 1 and determined to not be Group 1). Recovery Device = The TRE index is maintained without a recovery device.
VS-174P	30 TAC Chapter 115, Vent Gas Controls	R5121-FL2	Chapter 115 Division = The vent stream does not originate from a source for which another Division in 30 TAC Chapter 115 establishes a control requirement, emission specification, or exemption for that source. Combustion Exhaust = The vent stream is not from a combustion unit exhaust or the combustion unit is used as a control device for a vent stream originating from a noncombustion source subject to 30 TAC Chapter 115, Subchapter B, Division 2. Vent Type = Title 30 TAC Chapter 115, Subchapter B, Vent Gas Control rules are applicable and the vent is not specifically classified under the rule. Alternate Control Requirement = Alternate control is not used. Control Device Type = Smokeless flare
VS-174P	30 TAC Chapter 115, Vent Gas Controls	R5121-TOX	Chapter 115 Division = The vent stream does not originate from a source for which another Division in 30 TAC Chapter 115 establishes a control requirement, emission specification, or exemption for that source. Combustion Exhaust = The vent stream is not from a combustion unit exhaust or the combustion unit is used as a control device for a vent stream originating from a noncombustion source subject to 30 TAC Chapter 115, Subchapter B, Division 2.

			Vent Type = Title 30 TAC Chapter 115, Subchapter B, Vent Gas Control rules are applicable and the vent is not specifically classified under the rule. Alternate Control Requirement = Alternate control is not used. Control Device Type = Direct flame incinerator in which the vent gas stream is burned at a temperature or at least 1300° F (704 C).
VS-174P	30 TAC Chapter 115, Vent Gas Controls	R5121-VS62C	Chapter 115 Division = The vent stream does not originate from a source for which another Division in 30 TAC Chapter 115 establishes a control requirement, emission specification, or exemption for that source. Combustion Exhaust = The vent stream is not from a combustion unit exhaust or the combustion unit is used as a control device for a vent stream originating from a noncombustion source subject to 30 TAC Chapter 115, Subchapter B, Division 2. Vent Type = Title 30 TAC Chapter 115, Subchapter B, Vent Gas Control rules are applicable and the vent is not specifically classified under the rule. Alternate Control Requirement = Alternate control is not used. Control Device Type = Smokeless flare
VS-210T	30 TAC Chapter 115, Vent Gas Controls	R5121-FL2	Chapter 115 Division = The vent stream does not originate from a source for which another Division in 30 TAC Chapter 115 establishes a control requirement, emission specification, or exemption for that source. Combustion Exhaust = The vent stream is not from a combustion unit exhaust or the combustion unit is used as a control device for a vent stream originating from a noncombustion source subject to 30 TAC Chapter 115, Subchapter B, Division 2. Vent Type = Title 30 TAC Chapter 115, Subchapter B, Vent Gas Control rules are applicable and the vent is not specifically classified under the rule. Alternate Control Requirement = Alternate control is not used. Control Device Type = Smokeless flare
VS-210T	30 TAC Chapter 115, Vent Gas Controls	R5121-TOX	Chapter 115 Division = The vent stream does not originate from a source for which another Division in 30 TAC Chapter 115 establishes a control requirement, emission specification, or exemption for that source. Combustion Exhaust = The vent stream is not from a combustion unit exhaust or the combustion unit is used as a control device for a vent stream originating from a noncombustion source subject to 30 TAC Chapter 115, Subchapter B, Division 2. Vent Type = Title 30 TAC Chapter 115, Subchapter B, Vent Gas Control rules are applicable and the vent is not specifically classified under the rule. Alternate Control Requirement = Alternate control is not used. Control Device Type = Direct flame incinerator in which the vent gas stream is burned at a temperature or at least 1300° F (704 C).
VS-210T	30 TAC Chapter 115, Vent Gas Controls	R5121-VS62C	Chapter 115 Division = The vent stream does not originate from a source for which another Division in 30 TAC Chapter 115 establishes a control requirement, emission specification, or exemption for that source. Combustion Exhaust = The vent stream is not from a combustion unit exhaust or the combustion unit is used as a control device for a vent stream originating from a noncombustion source subject to 30 TAC Chapter 115, Subchapter B, Division 2. Vent Type = Title 30 TAC Chapter 115, Subchapter B, Vent Gas Control rules are applicable and the vent is not specifically classified under the rule. Alternate Control Requirement = Alternate control is not used. Control Device Type = Smokeless flare

VS-210T-1	30 TAC Chapter 115, Vent Gas Controls	R5121-FL2	Chapter 115 Division = The vent stream does not originate from a source for which another Division in 30 TAC Chapter 115 establishes a control requirement, emission specification, or exemption for that source. Combustion Exhaust = The vent stream is not from a combustion unit exhaust or the combustion unit is used as a control device for a vent stream originating from a noncombustion source subject to 30 TAC Chapter 115, Subchapter B, Division 2. Vent Type = Title 30 TAC Chapter 115, Subchapter B, Vent Gas Control rules are applicable and the vent is not specifically classified under the rule. Alternate Control Requirement = Alternate control is not used. Control Device Type = Smokeless flare
VS-210T-1	30 TAC Chapter 115, Vent Gas Controls	R5121-TOX	Chapter 115 Division = The vent stream does not originate from a source for which another Division in 30 TAC Chapter 115 establishes a control requirement, emission specification, or exemption for that source. Combustion Exhaust = The vent stream is not from a combustion unit exhaust or the combustion unit is used as a control device for a vent stream originating from a noncombustion source subject to 30 TAC Chapter 115, Subchapter B, Division 2. Vent Type = Title 30 TAC Chapter 115, Subchapter B, Vent Gas Control rules are applicable and the vent is not specifically classified under the rule. Alternate Control Requirement = Alternate control is not used. Control Device Type = Direct flame incinerator in which the vent gas stream is burned at a temperature or at least 1300° F (704 C).
VS-210T-1	30 TAC Chapter 115, Vent Gas Controls	R5121-VS62C	Chapter 115 Division = The vent stream does not originate from a source for which another Division in 30 TAC Chapter 115 establishes a control requirement, emission specification, or exemption for that source. Combustion Exhaust = The vent stream is not from a combustion unit exhaust or the combustion unit is used as a control device for a vent stream originating from a noncombustion source subject to 30 TAC Chapter 115, Subchapter B, Division 2. Vent Type = Title 30 TAC Chapter 115, Subchapter B, Vent Gas Control rules are applicable and the vent is not specifically classified under the rule. Alternate Control Requirement = Alternate control is not used. Control Device Type = Smokeless flare
VS-23T-1	30 TAC Chapter 115, Vent Gas Controls	R5121-FL2	Chapter 115 Division = The vent stream does not originate from a source for which another Division in 30 TAC Chapter 115 establishes a control requirement, emission specification, or exemption for that source. Combustion Exhaust = The vent stream is not from a combustion unit exhaust or the combustion unit is used as a control device for a vent stream originating from a noncombustion source subject to 30 TAC Chapter 115, Subchapter B, Division 2. Vent Type = Title 30 TAC Chapter 115, Subchapter B, Vent Gas Control rules are applicable and the vent is not specifically classified under the rule. Alternate Control Requirement = Alternate control is not used. Control Device Type = Smokeless flare
VS-23T-1	30 TAC Chapter 115, Vent Gas Controls	R5121-TOX	Chapter 115 Division = The vent stream does not originate from a source for which another Division in 30 TAC Chapter 115 establishes a control requirement, emission specification, or exemption for that source. Combustion Exhaust = The vent stream is not from a combustion unit exhaust or the combustion unit is used as a control device for a vent stream originating from a noncombustion source subject to 30 TAC Chapter 115, Subchapter B, Division 2. Vent Type = Title 30 TAC Chapter 115, Subchapter B, Vent Gas Control rules are applicable and the vent is not

			specifically classified under the rule. Alternate Control Requirement = Alternate control is not used. Control Device Type = Direct flame incinerator in which the vent gas stream is burned at a temperature or at least 1300° F (704 C).
VS-23T-1	30 TAC Chapter 115, Vent Gas Controls	R5121-VS62C	Chapter 115 Division = The vent stream does not originate from a source for which another Division in 30 TAC Chapter 115 establishes a control requirement, emission specification, or exemption for that source. Combustion Exhaust = The vent stream is not from a combustion unit exhaust or the combustion unit is used as a control device for a vent stream originating from a noncombustion source subject to 30 TAC Chapter 115, Subchapter B, Division 2. Vent Type = Title 30 TAC Chapter 115, Subchapter B, Vent Gas Control rules are applicable and the vent is not specifically classified under the rule. Alternate Control Requirement = Alternate control is not used. Control Device Type = Smokeless flare
VS-24T	30 TAC Chapter 115, Vent Gas Controls	R5121-FL2	Chapter 115 Division = The vent stream does not originate from a source for which another Division in 30 TAC Chapter 115 establishes a control requirement, emission specification, or exemption for that source. Combustion Exhaust = The vent stream is not from a combustion unit exhaust or the combustion unit is used as a control device for a vent stream originating from a noncombustion source subject to 30 TAC Chapter 115, Subchapter B, Division 2. Vent Type = Title 30 TAC Chapter 115, Subchapter B, Vent Gas Control rules are applicable and the vent is not specifically classified under the rule. Alternate Control Requirement = Alternate control is not used. Control Device Type = Smokeless flare
VS-24T	30 TAC Chapter 115, Vent Gas Controls	R5121-TOX	Chapter 115 Division = The vent stream does not originate from a source for which another Division in 30 TAC Chapter 115 establishes a control requirement, emission specification, or exemption for that source. Combustion Exhaust = The vent stream is not from a combustion unit exhaust or the combustion unit is used as a control device for a vent stream originating from a noncombustion source subject to 30 TAC Chapter 115, Subchapter B, Division 2. Vent Type = Title 30 TAC Chapter 115, Subchapter B, Vent Gas Control rules are applicable and the vent is not specifically classified under the rule. Alternate Control Requirement = Alternate control is not used. Control Device Type = Direct flame incinerator in which the vent gas stream is burned at a temperature or at least 1300° F (704 C).
VS-53T-1	30 TAC Chapter 115, Vent Gas Controls	R5121-VS62C	Chapter 115 Division = The vent stream does not originate from a source for which another Division in 30 TAC Chapter 115 establishes a control requirement, emission specification, or exemption for that source. Combustion Exhaust = The vent stream is not from a combustion unit exhaust or the combustion unit is used as a control device for a vent stream originating from a noncombustion source subject to 30 TAC Chapter 115, Subchapter B, Division 2. Vent Type = Title 30 TAC Chapter 115, Subchapter B, Vent Gas Control rules are applicable and the vent is not specifically classified under the rule. Alternate Control Requirement = Alternate control is not used. Control Device Type = Smokeless flare
VS-54T	30 TAC Chapter 115, Vent Gas Controls	R5127-VS54T	Chapter 115 Division = The vent stream does not originate from a source for which another Division in 30 TAC Chapter 115 establishes a control requirement, emission specification, or exemption for that source. Combustion Exhaust = The vent stream is not from a combustion unit exhaust or the combustion unit is used as a control device for a vent stream originating from a noncombustion source subject to 30 TAC Chapter 115, Subchapter B, Division 2. Vent Type = Title 30 TAC Chapter 115, Subchapter B, Vent Gas Control rules are applicable and the vent is not specifically classified under the rule. Combined 24-Hour VOC Weight = Combined VOC weight is less than or equal to 100 pounds (45.4 kg). VOC Concentration = VOC concentration is less than 612 ppmv. VOC Concentration/Emission Rate @ Max Operating Conditions = The VOC concentration or emission rate is less than the applicable exemption limit at maximum actual operating conditions and the alternate recordkeeping requirements of 30 TAC § 115.126(4) are being selected. Alternate Control Requirement = Alternate control is not used.
VS-54T-1	30 TAC Chapter 115, Vent Gas Controls	R5127-VS54T-1	Chapter 115 Division = The vent stream does not originate from a source for which another Division in 30 TAC Chapter 115 establishes a control requirement, emission specification, or exemption for that source. Combustion Exhaust = The vent stream is not from a combustion unit exhaust or the combustion unit is used as a control device for a vent stream originating from a noncombustion source subject to 30 TAC Chapter 115, Subchapter B, Division 2. Vent Type = Title 30 TAC Chapter 115, Subchapter B, Vent Gas Control rules are applicable and the vent is not specifically classified under the rule. Combined 24-Hour VOC Weight = Combined VOC weight is less than or equal to 100 pounds (45.4 kg). VOC Concentration = VOC concentration is less than 612 ppmv. VOC Concentration/Emission Rate @ Max Operating Conditions = The VOC concentration or emission rate is less than the applicable exemption limit at maximum actual operating conditions and the alternate recordkeeping requirements of 30 TAC § 115.126(4) are being selected.

			Alternate Control Requirement = Alternate control is not used.
VS-55T	30 TAC Chapter 115, Vent Gas Controls	R5127-VS55T	Chapter 115 Division = The vent stream does not originate from a source for which another Division in 30 TAC Chapter 115 establishes a control requirement, emission specification, or exemption for that source. Combustion Exhaust = The vent stream is not from a combustion unit exhaust or the combustion unit is used as a control device for a vent stream originating from a noncombustion source subject to 30 TAC Chapter 115, Subchapter B, Division 2. Vent Type = Title 30 TAC Chapter 115, Subchapter B, Vent Gas Control rules are applicable and the vent is not specifically classified under the rule. Combined 24-Hour VOC Weight = Combined VOC weight is less than or equal to 100 pounds (45.4 kg). VOC Concentration = VOC concentration is less than 612 ppmv. VOC Concentration/Emission Rate @ Max Operating Conditions = The VOC concentration or emission rate is less than the applicable exemption limit at maximum actual operating conditions and the alternate recordkeeping requirements of 30 TAC § 115.126(4) are being selected. Alternate Control Requirement = Alternate control is not used.
VS-55T	40 CFR Part 63, Subpart FFFF	63FFFF-VS55T	Emission Standard = The vent stream is Group 2 (not designated as Group 1 and determined to not be Group 1). Recovery Device = The TRE index is maintained without a recovery device.
VS-56T	30 TAC Chapter 115, Vent Gas Controls	R5127-VS56T	Chapter 115 Division = The vent stream does not originate from a source for which another Division in 30 TAC Chapter 115 establishes a control requirement, emission specification, or exemption for that source. Combustion Exhaust = The vent stream is not from a combustion unit exhaust or the combustion unit is used as a control device for a vent stream originating from a noncombustion source subject to 30 TAC Chapter 115, Subchapter B, Division 2. Vent Type = Title 30 TAC Chapter 115, Subchapter B, Vent Gas Control rules are applicable and the vent is not specifically classified under the rule. Combined 24-Hour VOC Weight = Combined VOC weight is less than or equal to 100 pounds (45.4 kg). VOC Concentration = VOC concentration is less than 612 ppmv. VS-86T	30 TAC Chapter 115, Vent Gas Controls	R5127-VS86T	Chapter 115 Division = The vent stream does not originate from a source for which another Division in 30 TAC Chapter 115 establishes a control requirement, emission specification, or exemption for that source.

			Combustion Exhaust = The vent stream is not from a combustion unit exhaust or the combustion unit is used as a control device for a vent stream originating from a noncombustion source subject to 30 TAC Chapter 115, Subchapter B, Division 2. Vent Type = Title 30 TAC Chapter 115, Subchapter B, Vent Gas Control rules are applicable and the vent is not specifically classified under the rule. Combined 24-Hour VOC Weight = Combined VOC weight is less than or equal to 100 pounds (45.4 kg). VOC Concentration = VOC concentration is less than 612 ppmv. VOC Concentration/Emission Rate @ Max Operating Conditions = The VOC concentration or emission rate is less than the applicable exemption limit at maximum actual operating conditions and the alternate recordkeeping requirements of 30 TAC § 115.126(4) are being selected. Alternate Control Requirement = Alternate control is not used.
VS-86T-1	30 TAC Chapter 115, Vent Gas Controls	R5127-VS86T-1	Chapter 115 Division = The vent stream does not originate from a source for which another Division in 30 TAC Chapter 115 establishes a control requirement, emission specification, or exemption for that source. Combustion Exhaust = The vent stream is not from a combustion unit exhaust or the combustion unit is used as a control device for a vent stream originating from a noncombustion source subject to 30 TAC Chapter 115, Subchapter B, Division 2. Vent Type = Title 30 TAC Chapter 115, Subchapter B, Vent Gas Control rules are applicable and the vent is not specifically classified under the rule. Combined 24-Hour VOC Weight = Combined VOC weight is less than or equal to 100 pounds (45.4 kg). VOC Concentration = VOC concentration is less than 612 ppmv. VOC Concentration/Emission Rate @ Max Operating Conditions = The VOC concentration or emission rate is less than the applicable exemption limit at maximum actual operating conditions and the alternate recordkeeping requirements of 30 TAC § 115.126(4) are being selected. Alternate Control Requirement = Alternate control is not used.
VS-88T	30 TAC Chapter 115, Vent Gas Controls	R5127-VS88T	Chapter 115 Division = The vent stream does not originate from a source for which another Division in 30 TAC Chapter 115 establishes a control requirement, emission specification, or exemption for that source. Combustion Exhaust = The vent stream is not from a combustion unit exhaust or the combustion unit is used as a control device for a vent stream originating from a noncombustion source subject to 30 TAC Chapter 115, Subchapter B, Division 2. Vent Type = Title 30 TAC Chapter 115, Subchapter B, Vent Gas Control rules are applicable and the vent is not specifically classified under the rule. Combined 24-Hour VOC Weight = Combined VOC weight is less than or equal to 100 pounds (45.4 kg). VOC Concentration = VOC concentration is less than 612 ppmv. VOC Concentration/Emission Rate @ Max Operating Conditions = The VOC concentration or emission rate is less than the applicable exemption limit at maximum actual operating conditions and the alternate recordkeeping requirements of 30 TAC § 115.126(4) are being selected. Alternate Control Requirement = Alternate control is not used.
VS-88T-1	30 TAC Chapter 115, Vent Gas Controls	R5127-VS88T-1	Chapter 115 Division = The vent stream does not originate from a source for which another Division in 30 TAC Chapter 115 establishes a control requirement, emission specification, or exemption for that source. Combustion Exhaust = The vent stream is not from a combustion unit exhaust or the combustion unit is used as a control device for a vent stream originating from a noncombustion source subject to 30 TAC Chapter 115, Subchapter B, Division 2. Vent Type = Title 30 TAC Chapter 115, Subchapter B, Vent Gas Control rules are applicable and the vent is not specifically classified under the rule.

			Combined 24-Hour VOC Weight = Combined VOC weight is less than or equal to 100 pounds (45.4 kg). VOC Concentration = VOC concentration is less than 612 ppmv. VOC Concentration/Emission Rate @ Max Operating Conditions = The VOC concentration or emission rate is less than the applicable exemption limit at maximum actual operating conditions and the alternate recordkeeping requirements of 30 TAC § 115.126(4) are being selected. Alternate Control Requirement = Alternate control is not used.
PT-CLEAN	30 TAC Chapter 115, Degreasing Processes	R5412-1	Solvent Degreasing Machine Type = Cold solvent cleaning machine. Alternate Control Requirement = The TCEQ Executive Director has not approved an alternative control requirement as allowed under 30 TAC § 115.413 or not alternative has been requested. Solvent Sprayed = No solvent is sprayed. Solvent Vapor Pressure = Solvent vapor pressure is less than or equal to 0.6 psia as measured at 100 degrees Fahrenheit. Solvent Heated = The solvent is heated to a temperature greater than 120 degrees Fahrenheit. Parts Larger than Drainage = No cleaned parts for which the machine is authorized to clean are larger than the internal drainage facility of the machine. Drainage Area = Area is less than 16 square inches. Disposal in Enclosed Containers = Waste solvent is properly disposed of in enclosed containers.
GRP-NNN	40 CFR Part 60, Subpart NNN	60NNN-3NFLR2	Subpart NNN Chemicals = The distillation unit produces any chemical listed in 40 CFR § 60.667 as a product, co-product, by-product, or intermediate. Construction/Modification Date = After December 30, 1983. Vent Type = A single distillation unit discharging vent stream into a vapor recovery system. Distillation Unit Type = Does not qualify for any exemption under § 60.660(c)(1)-(3). Total Design Capacity = 1 gigagram per year or greater. Vent Stream Flow Rate = Flow rate greater than or equal to 0.008 scm/min. Total Resource Effectiveness = TRE index value less than 8.0 not from a halogenated vent stream. TOC Reduction = Compliance is achieved by reducing total organic compound emissions (less methane and ethane) by 98 weight-percent or to a concentration of 20 ppmv dry basis corrected to 3 percent oxygen using a VOC emissions non-flare combustion control device. Subpart NNN Control Device = Flare.
GRP-NNN	40 CFR Part 60, Subpart NNN	60NNN-3NTOX	Subpart NNN Chemicals = The distillation unit produces any chemical listed in 40 CFR § 60.667 as a product, co-product, by-product, or intermediate. Construction/Modification Date = After December 30, 1983. Vent Type = A single distillation unit discharging vent stream into a vapor recovery system. Distillation Unit Type = Does not qualify for any exemption under § 60.660(c)(1)-(3). Total Design Capacity = 1 gigagram per year or greater. Vent Stream Flow Rate = Flow rate greater than or equal to 0.008 scm/min. Total Resource Effectiveness = TRE index value less than 8.0 not from a halogenated vent stream. TOC Reduction = Compliance is achieved by reducing total organic compound emissions (less methane and ethane) by 98 weight-percent or to a concentration of 20 ppmv dry basis corrected to 3 percent oxygen using a VOC emissions non-

			flare combustion control device. Subpart NNN Control Device = Thermal incinerator.
GRP-NNN	40 CFR Part 60, Subpart NNN	60NNN-3NVS62C	Subpart NNN Chemicals = The distillation unit produces any chemical listed in 40 CFR § 60.667 as a product, co-product, by-product, or intermediate. Construction/Modification Date = After December 30, 1983. Vent Type = A single distillation unit discharging vent stream into a vapor recovery system. Distillation Unit Type = Does not qualify for any exemption under § 60.660(c)(1)-(3). Total Design Capacity = 1 gigagram per year or greater. Vent Stream Flow Rate = Flow rate greater than or equal to 0.008 scm/min. Total Resource Effectiveness = TRE index value less than 8.0 not from a halogenated vent stream. TOC Reduction = Compliance is achieved by reducing total organic compound emissions (less methane and ethane) by 98 weight-percent or to a concentration of 20 ppmv dry basis corrected to 3 percent oxygen using a VOC emissions non-flare combustion control device. Subpart NNN Control Device = Flare.
GRP-RRRNNN	40 CFR Part 60, Subpart NNN	60NNN-3NRFLR2	Subpart NNN Chemicals = The distillation unit produces any chemical listed in 40 CFR § 60.667 as a product, co-product, by-product, or intermediate. Construction/Modification Date = After December 30, 1983. Vent Type = A single distillation unit discharging vent stream into a vapor recovery system. Distillation Unit Type = Does not qualify for any exemption under § 60.660(c)(1)-(3). Total Design Capacity = 1 gigagram per year or greater. Vent Stream Flow Rate = Flow rate greater than or equal to 0.008 scm/min. Total Resource Effectiveness = TRE index value less than 8.0 not from a halogenated vent stream. TOC Reduction = Compliance is achieved by reducing total organic compound emissions (less methane and ethane) by 98 weight-percent or to a concentration of 20 ppmv dry basis corrected to 3 percent oxygen using a VOC emissions non-flare combustion control device. Subpart NNN Control Device = Flare.
GRP-RRRNNN	40 CFR Part 60, Subpart NNN	60NNN-3NRTOX	Subpart NNN Chemicals = The distillation unit produces any chemical listed in 40 CFR § 60.667 as a product, co-product, by-product, or intermediate. Construction/Modification Date = After December 30, 1983. Vent Type = A single distillation unit discharging vent stream into a vapor recovery system. Distillation Unit Type = Does not qualify for any exemption under § 60.660(c)(1)-(3). Total Design Capacity = 1 gigagram per year or greater. Vent Stream Flow Rate = Flow rate greater than or equal to 0.008 scm/min. Total Resource Effectiveness = TRE index value less than 8.0 not from a halogenated vent stream. TOC Reduction = Compliance is achieved by reducing total organic compound emissions (less methane and ethane) by 98 weight-percent or to a concentration of 20 ppmv dry basis corrected to 3 percent oxygen using a VOC emissions non-flare combustion control device. Subpart NNN Control Device = Thermal incinerator.

GRP-RRRNNN	40 CFR Part 60, Subpart NNN	60NNN-3NRVS62C	Subpart NNN Chemicals = The distillation unit produces any chemical listed in 40 CFR § 60.667 as a product, co-product, by-product, or intermediate. Construction/Modification Date = After December 30, 1983. Vent Type = A single distillation unit discharging vent stream into a vapor recovery system. Distillation Unit Type = Does not qualify for any exemption under § 60.660(c)(1)-(3). Total Design Capacity = 1 gigagram per year or greater. Vent Stream Flow Rate = Flow rate greater than or equal to 0.008 scm/min. Total Resource Effectiveness = TRE index value less than 8.0 not from a halogenated vent stream. TOC Reduction = Compliance is achieved by reducing total organic compound emissions (less methane and ethane) by 98 weight-percent or to a concentration of 20 ppmv dry basis corrected to 3 percent oxygen using a VOC emissions non-flare combustion control device. Subpart NNN Control Device = Flare.
GRP-RRR	40 CFR Part 60, Subpart RRR	60RRR-8-FL2	Chemicals Listed in 40 CFR § 60.707 = The affected facility is part of a process unit that produces chemicals listed in 40 CFR § 60.707 as a product, co-product, by product, or intermediate. Construction/Modification Date = After June 29, 1990. Affected Facility Type = Reactor process not discharging its vent stream into a recovery system. Subject to Title 40 CFR Part 60, Subpart DDD = The reactor process is not subject to the provisions of Title 40 CFR Part 60, Subpart DDD. Subject to Title 40 CFR Part 60, Subpart NNN = The vent stream is not routed to a distillation unit subject to Title 40 CFR Part 60, Subpart NNN or has other releases to the air than from a pressure relief valve. TRE Index Value = TRE index value is less than or equal to 8.0 or a TRE index value is not calculated or claimed for exemption 40 CFR § 60.700(c)(2). TRE for Halogenated Vent Stream = TRE index value is being calculated for a nonhalogenated vent stream. Total Design Capacity = Total design capacity is 1 gigagram per year (1,100 tons per year) or greater. Vent Stream Flow Rate = Vent stream flow rate is 0.011 scm/min or greater, or value is not measured. TOC Exemption = No TOC concentration exemption. Control Device = Flare that meets the requirements of 40 CFR § 60.18. Bypass Line = There is a bypass line valve that could divert the vent stream around the control device and directly to the atmosphere. Bypass Line Valve Secured = The bypass line valve is secured in the closed position with a car-seal or a lock-and-key type configuration.
GRP-RRR	40 CFR Part 60, Subpart RRR	60RRR-8-TOX	Chemicals Listed in 40 CFR § 60.707 = The affected facility is part of a process unit that produces chemicals listed in 40 CFR § 60.707 as a product, co-product, by product, or intermediate. Construction/Modification Date = After June 29, 1990. Affected Facility Type = Reactor process not discharging its vent stream into a recovery system. Subject to Title 40 CFR Part 60, Subpart DDD = The reactor process is not subject to the provisions of Title 40 CFR Part 60, Subpart DDD. Subject to Title 40 CFR Part 60, Subpart NNN = The vent stream is not routed to a distillation unit subject to Title 40 CFR Part 60, Subpart NNN or has other releases to the air than from a pressure relief valve. TRE Index Value = TRE index value is less than or equal to 8.0 or a TRE index value is not calculated or claimed for exemption 40 CFR § 60.700(c)(2).

			TRE for Halogenated Vent Stream = TRE index value is being calculated for a nonhalogenated vent stream. Total Design Capacity = Total design capacity is 1 gigagram per year (1,100 tons per year) or greater. Vent Stream Flow Rate = Vent stream flow rate is 0.011 scm/min or greater, or value is not measured. TOC Exemption = No TOC concentration exemption. Control Device = Incinerator other than a catalytic incinerator used as the control device. Bypass Line = There is a bypass line valve that could divert the vent stream around the control device and directly to the atmosphere. Bypass Line Valve Secured = The bypass line valve is secured in the closed position with a car-seal or a lock-and-key type configuration.
GRP-RRR	40 CFR Part 60, Subpart RRR	60RRR-8-VS62C	Chemicals Listed in 40 CFR § 60.707 = The affected facility is part of a process unit that produces chemicals listed in 40 CFR § 60.707 as a product, co-product, by product, or intermediate. Construction/Modification Date = After June 29, 1990. Affected Facility Type = Reactor process not discharging its vent stream into a recovery system. Subject to Title 40 CFR Part 60, Subpart DDD = The reactor process is not subject to the provisions of Title 40 CFR Part 60, Subpart DDD. Subject to Title 40 CFR Part 60, Subpart NNN = The vent stream is not routed to a distillation unit subject to Title 40 CFR Part 60, Subpart NNN or has other releases to the air than from a pressure relief valve. TRE Index Value = TRE index value is less than or equal to 8.0 or a TRE index value is not calculated or claimed for exemption 40 CFR § 60.700(c)(2). Vent Stream Flow Rate = Vent stream flow rate is 0.011 scm/min or greater, or value is not measured. TOC Exemption = No TOC concentration exemption. Control Device = Incinerator other than a catalytic incinerator used as the control device. Bypass Line = There is a bypass line valve that could divert the vent stream around the control device and directly to the atmosphere. Bypass Line Valve Secured = The bypass line valve is secured in the closed position with a car-seal or a lock-and-key type configuration.
GRP-RRRNNN	40 CFR Part 60, Subpart RRR	603R3N-8-VS62C	Chemicals Listed in 40 CFR § 60.707 = The affected facility is part of a process unit that produces chemicals listed in 40 CFR § 60.707 as a product, co-product, by product, or intermediate. Construction/Modification Date = After June 29, 1990. Affected Facility Type = Reactor process not discharging its vent stream into a recovery system. Subject to Title 40 CFR Part 60, Subpart DDD = The reactor process is not subject to the provisions of Title 40 CFR Part 60, Subpart DDD. Subject to Title 40 CFR Part 60, Subpart NNN = The vent stream is not routed to a distillation unit subject to Title 40 CFR Part 60, Subpart NNN or has other releases to the air than from a pressure relief valve. TRE Index Value = TRE index value is less than or equal to 8.0 or a TRE index value is not calculated or claimed for exemption 40 CFR § 60.700(c)(2). TRE for Halogenated Vent Stream = TRE index value is being calculated for a nonhalogenated vent stream. Total Design Capacity = Total design capacity is 1 gigagram per year (1,100 tons per year) or greater. Vent Stream Flow Rate = Vent stream flow rate is 0.011 scm/min or greater, or value is not measured. TOC Exemption = No TOC concentration exemption. Control Device = Flare that meets the requirements of 40 CFR § 60.18.

			Bypass Line = There is a bypass line valve that could divert the vent stream around the control device and directly to the atmosphere. Bypass Line Valve Secured = The bypass line valve is secured in the closed position with a car-seal or a lock-and-key type configuration.
PROFLUSH	40 CFR Part 63, Subpart FFFF	63FFFF-FLSFLR2	Designated Grp1 = The emission stream is designated as Group 1. Vent Emission Control = Reduce uncontrolled organic HAP emissions from all batch process vents within the process by venting through a closed-vent system to a flare per Table 2.1.c. Designated HAL = The emission stream is not designated as halogenated. Determined HAL = The emission stream is determined not to be halogenated. Prior Eval = The data from a prior evaluation or assessment is used. Negative Pressure = The closed vent system is operated and maintained at atmospheric pressure. Bypass Line = Bypass line valves are secured in the closed position with a car-seal or lock-and-key configuration.
PROFLUSH	40 CFR Part 63, Subpart FFFF	63FFFF-FLSTOX	Designated Grp1 = The emission stream is designated as Group 1. Vent Emission Control = Reduce collective organic HAP emissions from the sum of all batch process vents within the process by 98% by weight or more by venting emissions from a sufficient number of the vents to any combination of non-flare control devices per Table 2.1.a. Small Device = A small control device (defined in § 63.2550) is not being used. Alt 63SS Mon Parameters = Alternate monitoring parameters or requirements have not been approved by the Administrator or have not been requested. CEMS = A CEMS is not used. SS Device Type = Incinerator other than a catalytic incinerator. Meets 63.988(b)(2) = The control device does not meet the criteria in § 63.988(b)(2). Designated HAL = The emission stream is not designated as halogenated. Determined HAL = The emission stream is determined not to be halogenated. HAL Device Type = No halogen scrubber or other halogen reduction device is used. Prior Eval = The data from a prior evaluation or assessment is used. Formaldehyde = The stream does not contain formaldehyde. Negative Pressure = The closed vent system is operated and maintained at atmospheric pressure. Bypass Line = Bypass line valves are secured in the closed position with a car-seal or lock-and-key configuration.
PROFLUSH	40 CFR Part 63, Subpart FFFF	63FFFF-FLSVS62C	Designated Grp1 = The emission stream is designated as Group 1. Vent Emission Control = Reduce uncontrolled organic HAP emissions from all batch process vents within the process by venting through a closed-vent system to a flare per Table 2.1.c. Designated HAL = The emission stream is not designated as halogenated. Determined HAL = The emission stream is determined not to be halogenated. Prior Eval = The data from a prior evaluation or assessment is used. Negative Pressure = The closed vent system is operated and maintained at atmospheric pressure. Bypass Line = Bypass line valves are secured in the closed position with a car-seal or lock-and-key configuration.

* - The “unit attributes” or operating conditions that determine what requirements apply

NSR Versus Title V FOP

The state of Texas has two Air permitting programs, New Source Review (NSR) and Title V Federal Operating Permits. The two programs are substantially different both in intent and permit content.

NSR is a preconstruction permitting program authorized by the Texas Clean Air Act and Title I of the Federal Clean Air Act (FCAA). The processing of these permits is governed by 30 Texas Administrative Code (TAC) Chapter 116.111. The Title V Federal Operating Program is a federal program authorized under Title V of the FCAA that has been delegated to the state of Texas to administer and is governed by 30 TAC Chapter 122. The major differences between the two permitting programs are listed in the table below:

NSR Permit	Federal Operating Permit (FOP)
Issued Prior to new Construction or modification of an existing facility	For initial permit with application shield, can be issued after operation commences; significant revisions require approval prior to operation.
Authorizes air emissions	Codifies existing applicable requirements, does not authorize new emissions
Ensures issued permits are protective of the environment and human health by conducting a health effects review and that requirement for best available control technology (BACT) is implemented.	Applicable requirements listed in permit are used by the inspectors to ensure proper operation of the site as authorized. Ensures that adequate monitoring is in place to allow compliance determination with the FOP.
Up to two Public notices may be required. Opportunity for public comment and contested case hearings for some authorizations.	One public notice required. Opportunity for public comments. No contested case hearings.
Applies to all point source emissions in the state.	Applies to all major sources and some non-major sources identified by the EPA.
Applies to facilities: a portion of site or individual emission sources	One or multiple FOPs cover the entire site (consists of multiple facilities)
Permits include terms and conditions under which the applicant must construct and operate its various equipment and processes on a facility basis.	Permits include terms and conditions that specify the general operational requirements of the site; and include codification of all applicable requirements for emission units at the site.
Opportunity for EPA review for Federal Prevention of Significant Deterioration (PSD) and Nonattainment (NA) permits for major sources.	Opportunity for EPA review, affected states review, and a Public petition period for every FOP.
Permits have a table listing maximum emission limits for pollutants	Permit has an applicable requirements table and Periodic Monitoring (PM) / Compliance Assurance Monitoring (CAM) tables which document applicable monitoring requirements.
Permits can be altered or amended upon application by company. Permits must be issued before construction or modification of facilities can begin.	Permits can be revised through several revision processes, which provide for different levels of public notice and opportunity to comment. Changes that would be significant revisions require that a revised permit be issued before those changes can be operated.
NSR permits are issued independent of FOP requirements.	FOPs are independent of NSR permits, but contain a list of all NSR permits incorporated by reference

New Source Review Requirements

Below is a list of the New Source Review (NSR) permits for the permitted area. These NSR permits are incorporated by reference into the operating permit and are enforceable under it. These permits can be found in the main TCEQ file room, located on the first floor of Building E, 12100 Park 35 Circle, Austin, Texas. In addition, many of the permits are accessible online through the link provided below. The Public Education Program may be contacted at 1-800-687-4040 or the Air Permits Division (APD) may be contacted at 1-512-239-1250 for help with any question.

Additionally, the site contains emission units that are permitted by rule under the requirements of 30 TAC Chapter 106, Permits by Rule. Permit by Rule (PBR) registrations submitted by permittees are also available online through the link provided below. The following table specifies the PBRs that apply to the site.

The status of air permits, applications, and PBR registrations may be found by performing the appropriate search of the databases located at the following website:

www.tceq.texas.gov/permitting/air/nav/air_status_permits.html

Details on how to search the databases are available in the **Obtaining Permit Documents** section below.

Number: 106.472	Version No./Date: 09/04/2000

Permits by Rule

The TCEQ has interpreted the emission limits prescribed in 30 TAC §106.4(a) as both emission thresholds and default emission limits. The emission limits in 30 TAC §106.4(a) are all considered applicable to each facility as a threshold matter to ensure that the owner/operator qualifies for the PBR authorization. Those same emission limits are also the default emission limits if the specific PBR does not further limit emissions or there is no lower, certified emission limit claimed by the owner/operator.

This interpretation is consistent with how TCEQ has historically determined compliance with the emission limits prior to the addition of the “as applicable” language. The “as applicable” language was added in 2014 as part of changes to the sentence structure in a rulemaking that made other changes to address greenhouse gases and was not intended as a substantive rule change. This interpretation also provides for effective and practical enforcement of 30 TAC §106.4(a), since for the TCEQ to effectively enforce the emission limits in 30 TAC §106.4(a) as emission thresholds, all emission limits must apply. As provided by 30 TAC §106.4(a)(2) and (3), an owner/operator shall not claim a PBR authorization if the facility is subject to major New Source Review. The practical and legal effect of the language in 30 TAC § 106.4 is that if a facility does not emit a pollutant, then the potential to emit for that particular pollutant is zero, and thus, the facility is not authorized to emit the pollutant pursuant to the PBR.

The permit holder is required to keep records for demonstrating compliance with PBRs in accordance with 30 TAC § 106.8 for the following categories:

- As stated in 30 TAC § 106.8(a), the permit holder is not required to keep records for de minimis sources as designated in 30 TAC § 116.119.
- As stated in 30 TAC § 106.8(b) for PBRs on the insignificant activities list, the permit holder is required to provide information that would demonstrate compliance with the general requirements of 30 TAC § 106.4.
- As stated in 30 TAC § 106.8(c) for all other PBRs, the permit holder must maintain sufficient records to demonstrate compliance with the general requirements specified in 30 TAC § 106.4 and to demonstrate compliance with the emission limits and any specific conditions of the PBR as applicable.

The application, or a previously submitted application, contains a PBR Supplemental Table. This table provides supplemental information for all PBR authorizations at the site or application area, including PBRs that are not listed on the OP-REQ1 form. PBRs that are not listed on the OP-REQ1 form authorize emission units that the TCEQ has determined are insignificant sources of emissions (IEUs). PBRs are enforceable through permit condition number 16. The EPA gives States broad discretion in prescribing monitoring, recordkeeping, and reporting for generally applicable requirements that cover insignificant emission units. (see EPA *White Paper Number 2 for Improved Implementation of the Part 70 Operating Permits Program*). Federal regulations specifically identify recordkeeping as an appropriate level of monitoring necessary to assure compliance with the requirements applicable to an emissions unit. Permitting authorities have the best sense of where it is appropriate to conclude that periodic monitoring is not necessary for IEUs, when state program rules already provide sufficient monitoring for these units.

In the case of IEUs in particular, the recordkeeping in 30 TAC §106.8 is sufficient because the units do not have the potential to violate emission limitations or other requirements under normal operating conditions. In particular, where the establishment of a regular program of monitoring would not significantly enhance the ability of the permit to assure compliance with the applicable requirement, the permitting authority can provide that the applicable requirement has monitoring sufficient to yield reliable data that is representative of the emission unit's compliance with the limitations. Therefore, for IEUs compliance with 30 TAC §106.8 is sufficient to meet federal monitoring requirements.

The PBR records may include, but are not limited to, production capacity and throughput, hours of operation, safety data sheets (SDS), chemical composition of raw materials, speciation of air contaminant data, engineering calculations, maintenance records, fugitive data, performance tests, capture/control device efficiencies, or parametric monitoring. The PBR records also satisfy the federal operating permit periodic monitoring requirements of 30 TAC § 122.142(c) as they are representative of the emission unit's compliance with 30 TAC Chapter 106.

Emission Units and Emission Points

In air permitting terminology, any source capable of generating emissions (for example, an engine or a sandblasting area) is called an Emission Unit. For purposes of Title V, emission units are specifically listed in the operating permit when they have applicable requirements other than New Source Review (NSR), or when they are listed in the permit shield table.

The actual physical location where the emissions enter the atmosphere (for example, an engine stack or a sand-blasting yard) is called an emission point. For New Source Review preconstruction permitting purposes, every emission unit has an associated emission point. Emission limits are listed in an NSR permit, associated with an emission point. This list of emission points and emission limits per pollutant is commonly referred to as the "Maximum Allowable Emission Rate Table", or "MAERT" for short. Specifically, the MAERT lists the Emission Point Number (EPN) that identifies the emission point, followed immediately by the Source Name, identifying the emission unit that is the source of those emissions on this table.

Thus, by reference, an emission unit in a Title V operating permit is linked by reference number to an NSR authorization, and its related emission point.

Monitoring Sufficiency

Federal and state rules, 40 CFR § 70.6(a)(3)(i)(B) and 30 TAC § 122.142(c) respectively, require that each federal operating permit include additional monitoring for applicable requirements that lack periodic or instrumental monitoring (which may include recordkeeping that serves as monitoring) that yields reliable data from a relevant time period that are representative of the emission unit's compliance with the applicable emission limitation or standard. Furthermore, the federal operating permit must include compliance assurance monitoring (CAM) requirements for emission sources that meet the applicability criteria of 40 CFR Part 64 in accordance with 40 CFR § 70.6(a)(3)(i)(A) and 30 TAC § 122.604(b).

With the exception of any emission units listed in the Periodic Monitoring or CAM Summaries in the FOP, the TCEQ Executive Director has determined that the permit contains sufficient monitoring, testing, recordkeeping, and reporting requirements that assure compliance with the applicable requirements. If applicable, each emission unit that requires additional monitoring in the form of periodic monitoring or CAM is described in further detail under the Rationale for CAM/PM Methods Selected section following this paragraph.

Rationale for Compliance Assurance Monitoring (CAM)/ Periodic Monitoring Methods Selected

Periodic Monitoring:

The Federal Clean Air Act requires that each federal operating permit include monitoring sufficient to assure compliance with the terms and conditions of the permit. Most of the emission limits and standards applicable to emission units at Title V sources include adequate monitoring to show that the units meet the limits and standards. For those requirements that do not include monitoring, or where the monitoring is not sufficient to assure compliance, the federal operating permit must include such monitoring for the emission units affected. The following emission units are subject to periodic monitoring requirements because the emission units are subject to an emission limitation or standard for an air pollutant (or surrogate thereof) in an applicable requirement that does not already require monitoring, or the monitoring for the applicable requirement is not sufficient to assure compliance:

Unit/Group/Process Information	
ID No.: PT-CLEAN	
Control Device ID No.: N/A	Control Device Type: N/A
Applicable Regulatory Requirement	
Name: 30 TAC Chapter 115, Degreasing Processes	SOP Index No.: R5412-1
Pollutant: VOC	Main Standard: § 115.412(1)
Monitoring Information	
Indicator: Visual Inspection	
Minimum Frequency: Monthly	
Averaging Period: N/A	
Deviation Limit: Inspection not conducted. No cover, or cover open when unit not in use. Device not properly labeled. Waste solvent not stored in closed container, or parts not drained for at least 15 seconds, or porous or absorbent materials degreased in unit.	
Basis of monitoring: The monitoring option to cover cold cleaner or the open-top vapor cleaner was included in the EPA “Periodic Monitoring Technical Reference Document” (April 1999) to monitor VOC sources. In addition to covering the cleaner records of monthly inspections of equipment is an effective way to ensure that the system is operating in accordance with its design.	

Unit/Group/Process Information	
ID No.: VS-178T	
Control Device ID No.: FL-2	Control Device Type: Flare
Applicable Regulatory Requirement	
Name: 40 CFR Part 60, Subpart Kb	SOP Index No.: 60KB-FLR2
Pollutant: VOC	Main Standard: [G]§ 60.112b(a)(3)
Monitoring Information	
Indicator: VOC Concentration	
Minimum Frequency: Once per year	
Averaging Period: n/a	
Deviation Limit: VOC concentration > 500 ppmv.	
Basis of monitoring: It is widely practiced and accepted to monitor the VOC concentration at the outlet of a control device by use of a portable analyzer with procedures such as EPA Test Method 25A or a VOC CEMS. The measured concentration along with stack flow rate or AP-42 factors and fuel consumption records may be used to demonstrate compliance with an underlying emission limit or standard. Outlet VOC concentration has been used as an indicator of VOC emissions in many federal rules including 40 CFR Part 60, Subpart III, 40 CFR Part 60, Subpart NNN, 40 CFR Part 60, Subpart RRR, 40 CFR Part 61, Subpart BB, 40 CFR Part 61, Subpart FF, 40 CFR Part 63, Subpart R, 40 CFR Part 63, Subpart DD, and 40 CFR Part 63, Subpart HH.	

Unit/Group/Process Information	
ID No.: VS-178T	
Control Device ID No.: FL-2	Control Device Type: Flare
Applicable Regulatory Requirement	
Name: 40 CFR Part 60, Subpart Kb	SOP Index No.: 60KB-FLR2
Pollutant: VOC	Main Standard: [G]§ 60.112b(a)(3)
Monitoring Information	
Indicator: Visual Inspection	
Minimum Frequency: Once per year	
Averaging Period: n/a	
Deviation Limit: Inspections not conducted, or defects discovered and not repaired.	
Basis of monitoring: It is widely practiced and accepted to use work practice as a monitoring option to demonstrate compliance. Preventive maintenance and visual inspections of control equipment, as recommended by the manufacturer, conducted by the owner or operator can ensure that the unit is operating properly. The work practice requirements prescribe that preventive maintenance and/or visual inspections be performed and recorded in a log. This option assures that the owner or operator is adequately maintaining the control equipment.	

Unit/Group/Process Information	
ID No.: VS-178T	
Control Device ID No.: TOX	Control Device Type: Thermal Incinerator (Direct Flame Incinerator/Regenerative Thermal Oxidizer)
Applicable Regulatory Requirement	
Name: 40 CFR Part 60, Subpart Kb	SOP Index No.: 60KB-TOX
Pollutant: VOC	Main Standard: [G]§ 60.112b(a)(3)
Monitoring Information	
Indicator: VOC Concentration	
Minimum Frequency: Once per year	
Averaging Period: n/a	
Deviation Limit: VOC concentration > 500 ppmv.	
Basis of monitoring: It is widely practiced and accepted to monitor the VOC concentration at the outlet of a control device by use of a portable analyzer with procedures such as EPA Test Method 25A or a VOC CEMS. The measured concentration along with stack flow rate or AP-42 factors and fuel consumption records may be used to demonstrate compliance with an underlying emission limit or standard. Outlet VOC concentration has been used as an indicator of VOC emissions in many federal rules including 40 CFR Part 60, Subpart III, 40 CFR Part 60, Subpart NNN, 40 CFR Part 60, Subpart RRR, 40 CFR Part 61, Subpart BB, 40 CFR Part 61, Subpart FF, 40 CFR Part 63, Subpart R, 40 CFR Part 63, Subpart DD, and 40 CFR Part 63, Subpart HH.	

Unit/Group/Process Information	
ID No.: VS-178T	
Control Device ID No.: TOX	Control Device Type: Thermal Incinerator (Direct Flame Incinerator/Regenerative Thermal Oxidizer)
Applicable Regulatory Requirement	
Name: 40 CFR Part 60, Subpart Kb	SOP Index No.: 60KB-TOX
Pollutant: VOC	Main Standard: [G]§ 60.112b(a)(3)
Monitoring Information	
Indicator: Visual Inspection	
Minimum Frequency: Once per year	
Averaging Period: n/a	
Deviation Limit: Inspections not conducted, or defects discovered and not repaired.	
Basis of monitoring: It is widely practiced and accepted to use work practice as a monitoring option to demonstrate compliance. Preventive maintenance and visual inspections of control equipment, as recommended by the manufacturer, conducted by the owner or operator can ensure that the unit is operating properly. The work practice requirements prescribe that preventive maintenance and/or visual inspections be performed and recorded in a log. This option assures that the owner or operator is adequately maintaining the control equipment.	

Unit/Group/Process Information	
ID No.: VS-178T	
Control Device ID No.: TOX	Control Device Type: Thermal Incinerator (Direct Flame Incinerator/Regenerative Thermal Oxidizer)
Applicable Regulatory Requirement	
Name: 40 CFR Part 60, Subpart Kb	SOP Index No.: 60KB-TOX
Pollutant: VOC	Main Standard: [G]§ 60.112b(a)(3)
Monitoring Information	
Indicator: Firebox Temperature	
Minimum Frequency: Once per week	
Averaging Period: N/A	
Deviation Limit: Minimum firebox temperature of 1,800 degrees F.	
Basis of monitoring: It is widely practiced and accepted to use performance tests, manufacturer's recommendations, engineering calculations and/or historical data to establish a minimum temperature for thermal incinerators. This minimum temperature must be maintained in order for the proper destruction efficiency. Operation below the minimum combustion temperature will result in incomplete combustion and potential noncompliance with emission limitations and/or standards. The monitoring of the combustion temperature of a thermal incinerator is commonly required in federal and state rules, including: 40 CFR Part 60, Subparts III, NNN, QQQ, and RRR; 40 CFR Part 61, Subparts BB and FF; 40 CFR Part 63, Subparts G, R, DD, EE, and HH; and 30 TAC Chapter 115.

Obtaining Permit Documents

The New Source Review Authorization References table in the FOP specifies all NSR authorizations that apply at the permit area covered by the FOP. Individual NSR permitting files are located in the TCEQ Central File Room (TCEQ Main Campus located at 12100 Park 35 Circle, Austin, Texas, 78753, Building E, Room 103). They can also be obtained electronically from TCEQ's Central File Room Online (https://www.tceq.texas.gov/goto/cfr-online). Guidance documents that describe how to search electronic records, including Permits by Rule (PBRs) or NSR permits incorporated by reference into an FOP, archived in the Central File Room server are available at https://www.tceq.texas.gov/permitting/air/nav/air_status_permits.html

All current PBRs are contained in Chapter 106 and can be viewed at the following website:

https://www.tceq.texas.gov/permitting/air/permitbyrule/air_pbr_index.html

Previous versions of 30 TAC Chapter 106 PBRs may be viewed at the following website:

1. www.tceq.texas.gov/permitting/air/permitbyrule/historical_rules/old106list/index106.html

2. Historical Standard Exemption lists may be viewed at the following website:

www.tceq.texas.gov/permitting/air/permitbyrule/historical_rules/oldselist/se_index.html

Additional information concerning PBRs is available on the TCEQ website:

https://www.tceq.texas.gov/permitting/air/nav/air_pbr.html

Compliance Review

1. In accordance with 30 TAC Chapter 60, the compliance history was reviewed on April 15, 2021.
   Site rating: 2.37 / Satisfactory Company rating: 2.37 / Satisfactory
   (High < 0.10; Satisfactory ≥ 0.10 and ≤ 55; Unsatisfactory > 55)
2. Has the permit changed on the basis of the compliance history or site/company rating?..... No

Site/Permit Area Compliance Status Review

1. Were there any out-of-compliance units listed on Form OP-ACPS?..... No
2. Is a compliance plan and schedule included in the permit?..... No

Permit reviewer notes:
The OP-ACPS submitted on August 14, 2020 identified one non-compliance situation, but an updated OP-ACPS submitted on April 5, 2021 indicated that the issue was resolved, and all units are in compliance.

FEDERAL OPERATING PERMIT

A FEDERAL OPERATING PERMIT IS HEREBY ISSUED TO
Noltex, L.L.C

AUTHORIZING THE OPERATION OF
EVOH Copolymer Facility
Plastics Material and Resin Manufacturing

LOCATED AT
Harris County, Texas
Latitude 29° 42′ 4″ Longitude 95° 2′ 32″
Regulated Entity Number: RN101049518

This permit is issued in accordance with and subject to the Texas Clean Air Act (TCAA), Chapter 382 of the Texas Health and Safety Code and Title 30 Texas Administrative Code Chapter 122 (30 TAC Chapter 122), Federal Operating Permits. Under 30 TAC Chapter 122, this permit constitutes the permit holder's authority to operate the site and emission units listed in this permit. Operations of the site and emission units listed in this permit are subject to all additional rules or amended rules and orders of the Commission pursuant to the TCAA.

This permit does not relieve the permit holder from the responsibility of obtaining New Source Review authorization for new, modified, or existing facilities in accordance with 30 TAC Chapter 116, Control of Air Pollution by Permits for New Construction or Modification.

The site and emission units authorized by this permit shall be operated in accordance with 30 TAC Chapter 122, the general terms and conditions, special terms and conditions, and attachments contained herein.

This permit shall expire five years from the date of issuance. The renewal requirements specified in 30 TAC § 122.241 must be satisfied in order to renew the authorization to operate the site and emission units.

Permit No: O1301 Issuance Date: _____

_____
For the Commission

Table of Contents

General Terms and Conditions

The permit holder shall comply with all terms and conditions contained in 30 TAC § 122.143 (General Terms and Conditions), 30 TAC § 122.144 (Recordkeeping Terms and Conditions), 30 TAC § 122.145 (Reporting Terms and Conditions), and 30 TAC § 122.146 (Compliance Certification Terms and Conditions).

In accordance with 30 TAC § 122.144(1), records of required monitoring data and support information required by this permit, or any applicable requirement codified in this permit, are required to be maintained for a period of five years from the date of the monitoring report, sample, or application unless a longer data retention period is specified in an applicable requirement. The five year record retention period supersedes any less stringent retention requirement that may be specified in a condition of a permit identified in the New Source Review Authorization attachment.

If the permit holder chooses to demonstrate that this permit is no longer required, a written request to void this permit shall be submitted to the Texas Commission on Environmental Quality (TCEQ) by the Responsible Official in accordance with 30 TAC § 122.161(e). The permit holder shall comply with the permit's requirements, including compliance certification and deviation reporting, until notified by the TCEQ that this permit is voided.

The permit holder shall comply with 30 TAC Chapter 116 by obtaining a New Source Review authorization prior to new construction or modification of emission units located in the area covered by this permit.

All reports required by this permit must include in the submittal a cover letter which identifies the following information: company name, TCEQ regulated entity number, air account number (if assigned), site name, area name (if applicable), and Air Permits Division permit number(s).

Special Terms and Conditions:

Emission Limitations and Standards, Monitoring and Testing, and Recordkeeping and Reporting

1. Permit holder shall comply with the following requirements:

   A. Emission units (including groups and processes) in the Applicable Requirements Summary attachment shall meet the limitations, standards, equipment specifications, monitoring, recordkeeping, reporting, testing, and other requirements listed in the Applicable Requirements Summary attachment to assure compliance with the permit.

B. The textual description in the column titled “Textual Description” in the Applicable Requirements Summary attachment is not enforceable and is not deemed as a substitute for the actual regulatory language. The Textual Description is provided for information purposes only.

C. A citation listed on the Applicable Requirements Summary attachment, which has a notation [G] listed before it, shall include the referenced section and subsection for all commission rules, or paragraphs for all federal and state regulations and all subordinate paragraphs, subparagraphs and clauses, subclauses, and items contained within the referenced citation as applicable requirements.

D. When a grouped citation, notated with a [G] in the Applicable Requirements Summary, contains multiple compliance options, the permit holder must keep records of when each compliance option was used.

E. Emission units subject to 40 CFR Part 63, Subpart ZZZZ as identified in the attached Applicable Requirements Summary table are subject to 30 TAC Chapter 113, Subchapter C, §113.1090 which incorporates the 40 CFR Part 63 Subpart by reference.

F. Emission units subject to 40 CFR Part 63, Subpart FFFF as identified in the attached Applicable Requirements Summary table are subject to 30 TAC Chapter 113, Subchapter C, § 113.890 which incorporates the 40 CFR Part 63 Subpart by reference.

2. The permit holder shall comply with the following sections of 30 TAC Chapter 101 (General Air Quality Rules):

A. Title 30 TAC § 101.1 (relating to Definitions), insofar as the terms defined in this section are used to define the terms used in other applicable requirements

B. Title 30 TAC § 101.3 (relating to Circumvention)

C. Title 30 TAC § 101.8 (relating to Sampling), if such action has been requested by the TCEQ

D. Title 30 TAC § 101.9 (relating to Sampling Ports), if such action has been requested by the TCEQ

E. Title 30 TAC § 101.10 (relating to Emissions Inventory Requirements)

F. Title 30 TAC § 101.201 (relating to Emission Event Reporting and Recordkeeping Requirements)

G. Title 30 TAC § 101.211 (relating to Scheduled Maintenance, Start-up, and Shutdown Reporting and Recordkeeping Requirements)

H. Title 30 TAC § 101.221 (relating to Operational Requirements)

I. Title 30 TAC § 101.222 (relating to Demonstrations)

J. Title 30 TAC § 101.223 (relating to Actions to Reduce Excessive Emissions)

3. Permit holder shall comply with the following requirements of 30 TAC Chapter 111:

A. Visible emissions from stationary vents with a flow rate of less than 100,000 actual cubic feet per minute and constructed after January 31, 1972 that are not listed in the

Applicable Requirements Summary attachment for 30 TAC Chapter 111, Subchapter A, Division 1, shall not exceed 20% opacity averaged over a six-minute period. The permit holder shall comply with the following requirements for stationary vents at the site subject to this standard:

(i) Title 30 TAC § 111.111(a)(1)(B) (relating to Requirements for Specified Sources)

(ii) Title 30 TAC § 111.111(a)(1)(E)

(iii) Title 30 TAC § 111.111(a)(1)(F)(i), (ii), (iii), or (iv)

(iv) For emission units with vent emissions subject to 30 TAC § 111.111(a)(1)(B), complying with 30 TAC § 111.111(a)(1)(F)(ii), (iii), or (iv), and capable of producing visible emissions from, but not limited to, particulate matter, acid gases and NO_x, the permit holder shall also comply with the following periodic monitoring requirements for the purpose of annual compliance certification under 30 TAC § 122.146. These periodic monitoring requirements do not apply to vents that are not capable of producing visible emissions such as vents that emit only colorless VOCs; vents from non-fuming liquids; vents that provide passive ventilation, such as plumbing vents; or vent emissions from any other source that does not obstruct the transmission of light. Vents, as specified in the "Applicable Requirements Summary" attachment, that are subject to the emission limitation of 30 TAC § 111.111(a)(1)(B) are not subject to the following periodic monitoring requirements:

(1) An observation of stationary vents from emission units in operation shall be conducted at least once during each calendar quarter unless the emission unit is not operating for the entire quarter.

(2) For stationary vents from a combustion source, if an alternative to the normally fired fuel is fired for a period greater than or equal to 24 consecutive hours, the permit holder shall conduct an observation of the stationary vent for each such period to determine if visible emissions are present. If such period is greater than 3 months, observations shall be conducted once during each quarter. Supplementing the normally fired fuel with natural gas or fuel gas to increase the net heating value to the minimum required value does not constitute creation of an alternative fuel.

(3) Records of all observations shall be maintained.

(4) Visible emissions observations of emission units operated during daylight hours shall be conducted no earlier than one hour after sunrise and no later than one hour before sunset. Visible emissions observations of emission units operated only at night must be made with additional lighting and the temporary installation of contrasting backgrounds. Visible emissions observations shall be made during times when the activities described in 30 TAC § 111.111(a)(1)(E) are not taking place. Visible emissions shall be determined with each stationary vent in clear view of the observer. The observer shall be at least 15 feet, but not more than 0.25 mile, away from each stationary vent during the observation. For outdoor locations, the observer shall select a position where the sun is not directly in the observer's eyes. When condensed water vapor is present within the plume, as it emerges from the emissions outlet, observations must be made beyond the point in the plume at which condensed water vapor is no longer visible. When water

vapor within the plume condenses and becomes visible at a distance from the emissions outlet, the observation shall be evaluated at the outlet prior to condensation of water vapor. A certified opacity reader is not required for visible emissions observations.

(5) Compliance Certification:

(a) If visible emissions are not present during the observation, the RO may certify that the source is in compliance with the applicable opacity requirement in 30 TAC § 111.111(a)(1) and (a)(1)(B).

(b) However, if visible emissions are present during the observation, the permit holder shall either list this occurrence as a deviation on the next deviation report as required under 30 TAC § 122.145(2) or conduct the appropriate opacity test specified in 30 TAC § 111.111(a)(1)(F) as soon as practicable, but no later than 24 hours after observing visible emissions to determine if the source is in compliance with the opacity requirements. If an opacity test is performed and the source is determined to be in compliance, the RO may certify that the source is in compliance with the applicable opacity requirement. However, if an opacity test is performed and the source is determined to be out of compliance, the permit holder shall list this occurrence as a deviation on the next deviation report as required under 30 TAC § 122.145(2). The opacity test must be performed by a certified opacity reader.

(c) Some vents may be subject to multiple visible emission or monitoring requirements. All credible data must be considered when certifying compliance with this requirement even if the observation or monitoring was performed to demonstrate compliance with a different requirement.

B. For visible emissions from a building, enclosed facility, or other structure; the permit holder shall comply with the following requirements:

(i) Title 30 TAC § 111.111(a)(7)(A) (relating to Requirements for Specified Sources)

(ii) Title 30 TAC § 111.111(a)(7)(B)(i) or (ii)

(iii) For a building containing an air emission source, enclosed facility, or other structure containing or associated with an air emission source subject to 30 TAC § 111.111(a)(7)(A), complying with 30 TAC § 111.111(a)(7)(B)(i) or (ii), and capable of producing visible emissions from, but not limited to, particulate matter, acid gases and NO_x, the permit holder shall also comply with the following periodic monitoring requirements for the purpose of annual compliance certification under 30 TAC § 122.146:

(1) An observation of visible emissions from a building containing an air emission source, enclosed facility, or other structure containing or associated with an air emission source which is required to comply with 30 TAC § 111.111(a)(7)(A) shall be conducted at least once during each calendar quarter unless the air emission source or enclosed facility is not operating for the entire quarter.

(2) Records of all observations shall be maintained.

(3) Visible emissions observations of air emission sources or enclosed facilities operated during daylight hours shall be conducted no earlier than one hour after sunrise and no later than one hour before sunset. Visible emissions observations of air emission sources or enclosed facilities operated only at night must be made with additional lighting and the temporary installation of contrasting backgrounds. Visible emissions shall be determined with each emissions outlet in clear view of the observer. The observer shall be at least 15 feet, but not more than 0.25 mile, away from each emissions outlet during the observation. For outdoor locations, the observer shall select a position where the sun is not directly in the observer's eyes. When condensed water vapor is present within the plume, as it emerges from the emissions outlet, observations must be made beyond the point in the plume at which condensed water vapor is no longer visible. When water vapor within the plume condenses and becomes visible at a distance from the emissions outlet, the observation shall be evaluated at the outlet prior to condensation of water vapor. A certified opacity reader is not required for visible emissions observations.

(4) Compliance Certification:

(a) If visible emissions are not present during the observation, the RO may certify that the source is in compliance with the applicable opacity requirement in 30 TAC § 111.111(a)(7) and (a)(7)(A).

(b) However, if visible emissions are present during the observation, the permit holder shall either list this occurrence as a deviation on the next deviation report as required under 30 TAC § 122.145(2) or conduct the appropriate opacity test specified in 30 TAC § 111.111(a)(7)(B) as soon as practicable, but no later than 24 hours after observing visible emissions to determine if the source is in compliance with the opacity requirements. If an opacity test is performed and the source is determined to be in compliance, the RO may certify that the source is in compliance with the applicable opacity requirement. However, if an opacity test is performed and the source is determined to be out of compliance, the permit holder shall list this occurrence as a deviation on the next deviation report as required under 30 TAC § 122.145(2). The opacity test must be performed by a certified opacity reader.

C. Certification of opacity readers determining opacities under Method 9 (as outlined in 40 CFR Part 60, Appendix A) to comply with opacity monitoring requirements shall be accomplished by completing the Visible Emissions Evaluators Course, or approved agency equivalent, no more than 180 days before the opacity reading.

D. For emission units with contributions from uncombined water, the permit holder shall comply with the requirements of 30 TAC § 111.111(b).

E. Emission limits on nonagricultural processes, except for the steam generators specified in 30 TAC § 111.153, shall comply with the following requirements:

(i) Emissions of PM from any source may not exceed the allowable rates as required in 30 TAC § 111.151(a) (relating to Allowable Emissions Limits)

(ii) Sources with an effective stack height (h_e) less than the standard effective stack height (H_e), must reduce the allowable emission level by multiplying it by $[h_e/H_e]^2$ as required in 30 TAC § 111.151(b)

(iii) Effective stack height shall be calculated by the equation specified in 30 TAC § 111.151(c)

4. For storage vessels maintaining working pressure as specified in 30 TAC Chapter 115, Subchapter B, Division 1: Storage of Volatile Organic Compounds, the permit holder shall comply with the requirements of 30 TAC § 115.112(e)(1).

5. For industrial wastewater specified in 30 TAC Chapter 115, Subchapter B, the permit holder shall comply with the following requirements:

A. Title 30 TAC § 115.145 (relating to Approved Test Methods)

B. Title 30 TAC § 115.146 (relating to Recordkeeping Requirements)

C. Title 30 TAC § 115.147(1) (relating to Exemptions)

D. Title 30 TAC § 115.148 (relating to Determination of Wastewater Characteristics)

6. The permit holder shall comply with the following requirements of 30 TAC Chapter 115, Subchapter F, Division 3, Degassing of Storage Tanks, Transport Vessels and Marine Vessels:

A. For degassing of stationary VOC storage tanks, the permit holder shall comply with the following requirements:

(i) Title 30 TAC § 115.541(a) - (c) (relating to Emission Specifications)

(ii) Title 30 TAC § 115.541(f) (relating to Emission Specifications), for floating roof storage tanks

(iii) Title 30 TAC § 115.542(a) and (a)(1), (a)(2), (a)(3) or (a)(4) (relating to Control Requirements). Where the requirements of 30 TAC Chapter 115, Subchapter F contain multiple compliance options, the permit holder shall keep records of when each compliance option was used.

(iv) Title 30 TAC § 115.542(b) - (d), (relating to Control Requirements)

(v) Title 30 TAC § 115.543 (relating to Alternate Control Requirements)

(vi) Title 30 TAC § 115.544(a)(1) and (a)(2) (relating to Inspection, Monitoring, and Testing Requirements), for inspections

(vii) Title 30 TAC § 115.544(b) (relating to Inspection, Monitoring, and Testing Requirements), for monitoring

(viii) Title 30 TAC § 115.544(b)(1) and (b)(2) (relating to Inspection, Monitoring, and Testing Requirements), for monitoring of control devices

(ix) Title 30 TAC § 115.544(b)(2)(A) - (J) (relating to Inspection, Monitoring, and Testing Requirements), for monitoring (as appropriate to the control device)

(x) Title 30 TAC § 115.544(b)(3), (b)(4) and (b)(6) (relating to Inspection, Monitoring, and Testing Requirements), for VOC concentration or lower explosive limit threshold monitoring

(xi) Title 30 TAC § 115.544(c), and (c)(1) - (c)(3) (relating to Inspection, Monitoring, and Testing Requirements), for testing of control devices used to comply with 30 TAC § 115.542(a)(1)

(xii) Title 30 TAC § 115.545(1) - (7), (9) - (11) and (13) (relating to Approved Test Methods)

(xiii) Title 30 TAC § 115.546(a), (a)(1) and (a)(3) (relating to Recordkeeping and Notification Requirements), for recordkeeping

(xiv) Title 30 TAC § 115.546(a)(2) and (a)(2)(A) - (J) (relating to Recordkeeping and Notification Requirements), for recordkeeping (as appropriate to the control device)

(xv) Title 30 TAC § 115.546(a)(4) (relating to Recordkeeping and Notification Requirements), for recordkeeping of testing of control devices used to comply with 30 TAC § 115.542(a)(1)

(xvi) Title 30 TAC § 115.546(b) (relating to Recordkeeping and Notification Requirements), for notification

(xvii) Title 30 TAC § 115.547(4) (relating to Exemptions)

7. The permit holder shall comply with the requirements of 30 TAC § 115.722(b) (relating to Site-wide Cap and Control Requirements) and the requirements of 30 TAC § 115.726(g) (relating to Recordkeeping and Reporting Requirements).

8. The permit holder shall comply with the requirements of 30 TAC § 115.761(b) (relating to Site-wide Cap) and the requirements of 30 TAC § 115.766(g) (relating to Recordkeeping and Reporting Requirements).

9. The permit holder shall comply with the following requirements of 30 TAC Chapter 117:

   A. For boilers, process heaters, stationary reciprocating engines, and turbines (including duct burners) exempt from Subchapter D, Division 1 at minor sources of NO_x under 30 TAC § 117.2003(a), the permit holder shall comply with 30 TAC §§ 117.2030(c), 117.2035(g), 117.2045(b) and 117.2045(c).

10. The permit holder shall comply with the following requirements for units subject to any subpart of 40 CFR Part 60, unless otherwise stated in the applicable subpart:

    A. Title 40 CFR § 60.7 (relating to Notification and Recordkeeping)

    B. Title 40 CFR § 60.8 (relating to Performance Tests)

    C. Title 40 CFR § 60.11 (relating to Compliance with Standards and Maintenance Requirements)

D. Title 40 CFR § 60.12 (relating to Circumvention)

E. Title 40 CFR § 60.13 (relating to Monitoring Requirements)

F. Title 40 CFR § 60.14 (relating to Modification)

G. Title 40 CFR § 60.15 (relating to Reconstruction)

H. Title 40 CFR § 60.19 (relating to General Notification and Reporting Requirements)

11. The permit holder shall comply with the requirements of 30 TAC Chapter 113, Subchapter C, § 113.100 for units subject to any subpart of 40 CFR Part 63, unless otherwise stated in the applicable subpart.

12. For miscellaneous chemical process facilities subject to maintenance wastewater requirements as specified in 40 CFR § 63.2485, Table 7, the permit holder shall comply with the requirements of 40 CFR § 63.105 (relating to Maintenance Wastewater Requirements) (Title 30 TAC Chapter 113, Subchapter C, § 113.890 incorporated by reference).

13. For miscellaneous chemical process facilities with Group 2 wastewater streams subject to wastewater operations requirements in 40 CFR Part 63, Subpart FFFF, the permit holder shall comply with the requirements of 40 CFR § 63.132(a), (a)(1), (a)(1)(i), and (a)(3) as specified in § 63.2485(a) (Title 30 TAC Chapter 113, Subchapter C, § 113.890 incorporated by reference).

14. The permit holder shall comply with certified registrations submitted to the TCEQ for purposes of establishing federally enforceable emission limits. A copy of the certified registration shall be maintained with the permit. Records sufficient to demonstrate compliance with the established limits shall be maintained. The certified registration and records demonstrating compliance shall be provided, on request, to representatives of the appropriate TCEQ regional office and any local air pollution control agency having jurisdiction over the site. The permit holder shall submit updated certified registrations when changes at the site require establishment of new emission limits. If changes result in emissions that do not remain below major source thresholds, the permit holder shall submit a revision application to codify the appropriate requirements in the permit.

Additional Monitoring Requirements

15. The permit holder shall comply with the periodic monitoring requirements as specified in the attached “Periodic Monitoring Summary” upon issuance of the permit. Except for, as applicable, monitoring malfunctions, associated repairs, and required quality assurance or control activities (including, as applicable, calibration checks and required zero and span adjustments), the permit holder shall conduct all monitoring in continuous operation (or shall collect data at all required intervals) at all times that the pollutant-specific emissions unit is operating. The permit holder may elect to collect monitoring data on a more frequent basis and average the data, consistent with the averaging time or minimum frequency specified in the “Periodic Monitoring Summary,” for purposes of determining whether a deviation has occurred. However, the additional data points must be collected on a regular basis. In no event shall data be collected and used in particular instances to avoid reporting deviations. Deviations shall be reported according to 30 TAC § 122.145 (Reporting Terms and Conditions).

New Source Review Authorization Requirements

16. Permit holder shall comply with the requirements of New Source Review authorizations issued or claimed by the permit holder for the permitted area, including permits, permits by rule (including the permits by rule identified in the PBR Supplemental Tables in the application), standard

permits, flexible permits, special permits, permits for existing facilities including Voluntary Emissions Reduction Permits and Electric Generating Facility Permits issued under 30 TAC Chapter 116, Subchapter I, or special exemptions referenced in the New Source Review Authorization References attachment. These requirements:

A. Are incorporated by reference into this permit as applicable requirements

B. Shall be located with this operating permit

C. Are not eligible for a permit shield

17. The permit holder shall comply with the general requirements of 30 TAC Chapter 106, Subchapter A or the general requirements, if any, in effect at the time of the claim of any PBR.

18. The permit holder shall maintain records to demonstrate compliance with any emission limitation or standard that is specified in a permit by rule (PBR) or Standard Permit listed in the New Source Review Authorizations attachment. The records shall yield reliable data from the relevant time period that are representative of the emission unit's compliance with the PBR or Standard Permit. These records may include, but are not limited to, production capacity and throughput, hours of operation, safety data sheets (SDS), chemical composition of raw materials, speciation of air contaminant data, engineering calculations, maintenance records, fugitive data, performance tests, capture/control device efficiencies, direct pollutant monitoring (CEMS, COMS, or PEMS), or control device parametric monitoring. These records shall be made readily accessible and available as required by 30 TAC § 122.144. Any monitoring or recordkeeping data indicating noncompliance with the PBR or Standard Permit shall be considered and reported as a deviation according to 30 TAC § 122.145 (Reporting Terms and Conditions).

Compliance Requirements

19. The permit holder shall certify compliance in accordance with 30 TAC § 122.146. The permit holder shall comply with 30 TAC § 122.146 using at a minimum, but not limited to, the continuous or intermittent compliance method data from monitoring, recordkeeping, reporting, or testing required by the permit and any other credible evidence or information. The certification period may not exceed 12 months and the certification must be submitted within 30 days after the end of the period being certified.

20. Use of Emission Credits to comply with applicable requirements:

A. Unless otherwise prohibited, the permit holder may use emission credits to comply with the following applicable requirements listed elsewhere in this permit:

(i) Title 30 TAC Chapter 115

(ii) Title 30 TAC Chapter 117

(iii) Offsets for Title 30 TAC Chapter 116

B. The permit holder shall comply with the following requirements in order to use the emission credits to comply with the applicable requirements:

(i) The permit holder must notify the TCEQ according to 30 TAC § 101.306(c)-(d)

(ii) The emission credits to be used must meet all the geographic, timeliness, applicable pollutant type, and availability requirements listed in 30 TAC Chapter 101, Subchapter H, Division 1

(iii) The executive director has approved the use of the credit according to 30 TAC § 101.306(c)-(d)

(iv) The permit holder keeps records of the use of credits towards compliance with the applicable requirements in accordance with 30 TAC § 101.302(g) and 30 TAC Chapter 122

(v) Title 30 TAC § 101.305 (relating to Emission Reductions Achieved Outside the United States)

21. Use of Discrete Emission Credits to comply with the applicable requirements:

A. Unless otherwise prohibited, the permit holder may use discrete emission credits to comply with the following applicable requirements listed elsewhere in this permit:

(i) Title 30 TAC Chapter 115

(ii) Title 30 TAC Chapter 117

(iii) If applicable, offsets for Title 30 TAC Chapter 116

(iv) Temporarily exceed state NSR permit allowables

B. The permit holder shall comply with the following requirements in order to use the credit to comply with the applicable requirements:

(i) The permit holder must notify the TCEQ according to 30 TAC § 101.376(d)

(ii) The discrete emission credits to be used must meet all the geographic, timeliness, applicable pollutant type, and availability requirements listed in 30 TAC Chapter 101, Subchapter H, Division 4

(iii) The executive director has approved the use of the discrete emission credits according to 30 TAC § 101.376(d)(1)(A)

(iv) The permit holder keeps records of the use of credits towards compliance with the applicable requirements in accordance with 30 TAC § 101.372(h) and 30 TAC Chapter 122

(v) Title 30 TAC § 101.375 (relating to Emission Reductions Achieved Outside the United States)

Risk Management Plan

22. For processes subject to 40 CFR Part 68 and specified in 40 CFR § 68.10, the permit holder shall comply with the requirements of the Accidental Release Prevention Provisions in 40 CFR Part 68. The permit holder shall submit to the appropriate agency either a compliance schedule for meeting the requirements of 40 CFR Part 68 by the date provided in 40 CFR § 68.10(a), or as part of the compliance certification submitted under this permit, a certification statement that the source is in compliance with all requirements of 40 CFR Part 68, including the registration and submission of a risk management plan.

Protection of Stratospheric Ozone

23. Permit holders at a site subject to Title VI of the FCAA Amendments shall meet the following requirements for protection of stratospheric ozone:

    A. Any on site servicing, maintenance, and repair on refrigeration and nonmotor vehicle air-conditioning appliances using ozone-depleting refrigerants or non-exempt substitutes shall be conducted in accordance with 40 CFR Part 82, Subpart F. Permit holders shall ensure that repairs on or refrigerant removal from refrigeration and nonmotor vehicle air-conditioning appliances using ozone-depleting refrigerants are performed only by properly certified technicians using certified equipment. Records shall be maintained as required by 40 CFR Part 82, Subpart F.

Permit Location

24. The permit holder shall maintain a copy of this permit and records related to requirements listed in this permit on site.

Permit Shield (30 TAC § 122.148)

25. A permit shield is granted for the emission units, groups, or processes specified in the attached "Permit Shield." Compliance with the conditions of the permit shall be deemed compliance with the specified potentially applicable requirements or specified potentially applicable state-only requirements listed in the attachment "Permit Shield." Permit shield provisions shall not be modified by the executive director until notification is provided to the permit holder. No later than 90 days after notification of a change in a determination made by the executive director, the permit holder shall apply for the appropriate permit revision to reflect the new determination. Provisional terms are not eligible for this permit shield. Any term or condition, under a permit shield, shall not be protected by the permit shield if it is replaced by a provisional term or condition or the basis of the term and condition changes.

Applicable Requirements Summary

Note: A "none" entry may be noted for some emission sources in this permit's "Applicable Requirements Summary" under the heading of "Monitoring and Testing Requirements" and/or "Recordkeeping Requirements" and/or "Reporting Requirements." Such a notation indicates that there are no requirements for the indicated emission source as identified under the respective column heading(s) for the stated portion of the regulation when the emission source is operating under the conditions of the specified SOP Index Number. However, other relevant requirements pursuant to 30 TAC Chapter 122

including Recordkeeping Terms and Conditions (30 TAC § 122.144), Reporting Terms and Conditions (30 TAC § 122.145), and Compliance Certification Terms and Conditions (30 TAC § 122.146) continue to apply.

Unit Summary

Unit/Group/ Process ID No.	Unit Type	Group/Inclusive Units	SOP Index No.	Regulation	Requirement Driver
COOLTOW	INDUSTRIAL PROCESS COOLING TOWERS	N/A	R5761-COOLTOW	30 TAC Chapter 115, HRVOC Cooling Towers	No changing attributes.
COOLTOW	INDUSTRIAL PROCESS COOLING TOWERS	N/A	63FFFF-COOLTOW2	40 CFR Part 63, Subpart FFFF	No changing attributes.
COOLTOW2	INDUSTRIAL PROCESS COOLING TOWERS	N/A	R5761-COOLTOW2	30 TAC Chapter 115, HRVOC Cooling Towers	No changing attributes.
COOLTOW2	INDUSTRIAL PROCESS COOLING TOWERS	N/A	63FFFF-COOLTOW2	40 CFR Part 63, Subpart FFFF	No changing attributes.
EMGEN2	SRIC ENGINES	N/A	60IIII-2005+	40 CFR Part 60, Subpart IIII	No changing attributes.
EMGEN2	SRIC ENGINES	N/A	63ZZZZ-06+	40 CFR Part 63, Subpart ZZZZ	No changing attributes.
FL-2	FLARES	N/A	R1111-FL2	30 TAC Chapter 111, Visible Emissions	No changing attributes.
FL-2	FLARES	N/A	R5720-HRVOCFL2	30 TAC Chapter 115, HRVOC Vent Gas	No changing attributes.
FL-2	FLARES	N/A	60A-FL2	40 CFR Part 60, Subpart A	No changing attributes.
FL-2	FLARES	N/A	63A-FL2	40 CFR Part 63, Subpart A	No changing attributes.
GC1	EMISSION POINTS/STATIONARY VENTS/PROCESS VENTS	N/A	R5127-GC1	30 TAC Chapter 115, Vent Gas Controls	No changing attributes.
GC2	EMISSION POINTS/STATIONARY VENTS/PROCESS VENTS	N/A	R5127-GC2	30 TAC Chapter 115, Vent Gas Controls	No changing attributes.
GC3	EMISSION POINTS/STATIONARY VENTS/PROCESS VENTS	N/A	R5127-GC3	30 TAC Chapter 115, Vent Gas Controls	No changing attributes.
GRP-NNN	EMISSION POINTS/STATIONARY	HE-252, HE-350, HE-703, HE-751, HE-	R5121-FL2	30 TAC Chapter 115, Vent Gas Controls	Control Device Type = Smokeless flare

Additional Monitoring Requirements

Periodic Monitoring Summary

Unit/Group/Process Information	
ID No.: PT-CLEAN	
Control Device ID No.: N/A	Control Device Type: N/A
Applicable Regulatory Requirement	
Name: 30 TAC Chapter 115, Degreasing Processes	SOP Index No.: R5412-1
Pollutant: VOC	Main Standard: § 115.412(1)
Monitoring Information	
Indicator: Visual Inspection	
Minimum Frequency: Monthly	
Averaging Period: N/A	
Deviation Limit: Inspection not conducted. No cover, or cover open when unit not in use. Device not properly labeled. Waste solvent not stored in closed container, or parts not drained for at least 15 seconds, or porous or absorbent materials degreased in unit.	
Periodic Monitoring Text: Inspect equipment and record data monthly to ensure compliance with § 115.412(1)(A), (C), and (F). Any monitoring data which indicates that the cold cleaner is not in compliance with the applicable requirements of § 115.412(1)(A), (C), or (F) shall be considered and reported as a deviation.	

Periodic Monitoring Summary

Unit/Group/Process Information	
ID No.: VS-178T	
Control Device ID No.: FL-2	Control Device Type: Flare
Applicable Regulatory Requirement	
Name: 40 CFR Part 60, Subpart Kb	SOP Index No.: 60KB-FLR2
Pollutant: VOC	Main Standard: [G]§ 60.112b(a)(3)
Monitoring Information	
Indicator: VOC Concentration	
Minimum Frequency: Once per year	
Averaging Period: N/A	
Deviation Limit: VOC concentration > 500 ppmv.	
Periodic Monitoring Text: Measure and record fugitive emissions from the vapor collection system in accordance with part 60, appendix A, method 21.	

Periodic Monitoring Summary

Unit/Group/Process Information	
ID No.: VS-178T	
Control Device ID No.: FL-2	Control Device Type: Flare
Applicable Regulatory Requirement	
Name: 40 CFR Part 60, Subpart Kb	SOP Index No.: 60KB-FLR2
Pollutant: VOC	Main Standard: [G]§ 60.112b(a)(3)
Monitoring Information	
Indicator: Visual Inspection	
Minimum Frequency: Once per year	
Averaging Period: N/A	
Deviation Limit: Inspections not conducted, or defects discovered and not repaired.	
Periodic Monitoring Text: Visually inspect all components of the vapor collection system for defects, such as cracks, holes, gaps, loose connections, or broken or missing covers or other closure devices, that could result in air emissions.	

Periodic Monitoring Summary

Unit/Group/Process Information	
ID No.: VS-178T	
Control Device ID No.: TOX	Control Device Type: Thermal incinerator (direct flame incinerator/regenerative thermal oxidizer)
Applicable Regulatory Requirement	
Name: 40 CFR Part 60, Subpart Kb	SOP Index No.: 60KB-TOX
Pollutant: VOC	Main Standard: [G]§ 60.112b(a)(3)
Monitoring Information	
Indicator: Firebox Temperature	
Minimum Frequency: Once per week	
Averaging Period: N/A	
Deviation Limit: Minimum firebox temperature of 1,800 degrees F.	
Periodic Monitoring Text: Monitor and record the firebox temperature in the thermal oxidizer. The temperature measurement device shall be installed, calibrated and maintained according to accepted practice and the manufacturer's specifications. Any monitoring data below the minimum limit shall be considered and reported as a deviation.	

Periodic Monitoring Summary

Unit/Group/Process Information

Control Device ID No.: TOX	Control Device Type: Thermal incinerator (direct flame incinerator/regenerative thermal oxidizer)
Applicable Regulatory Requirement	
Name: 40 CFR Part 60, Subpart Kb	SOP Index No.: 60KB-TOX
Pollutant: VOC	Main Standard: [G]§ 60.112b(a)(3)
Monitoring Information	
Indicator: Visual Inspection	
Minimum Frequency: Once per year	
Averaging Period: N/A	
Deviation Limit: Inspections not conducted, or defects discovered and not repaired.	
Periodic Monitoring Text: Visually inspect all components of the vapor collection system for defects, such as cracks, holes, gaps, loose connections, or broken or missing covers or other closure devices, that could result in air emissions.	

Periodic Monitoring Summary

Unit/Group/Process Information	
ID No.: VS-33T	
Control Device ID No.: VS-62C	Control Device Type: Flare
Applicable Regulatory Requirement	
Name: 40 CFR Part 60, Subpart Kb	SOP Index No.: 60KB-VS62C
Pollutant: VOC	Main Standard: [G]§ 60.112b(a)(3)
Monitoring Information	
Indicator: VOC Concentration	
Minimum Frequency: Once per year	
Averaging Period: N/A	
Deviation Limit: VOC concentration > 500 ppmv.	
Periodic Monitoring Text: Measure and record fugitive emissions from the vapor collection system in accordance with part 60, appendix A, method 21.	

Periodic Monitoring Summary

Unit/Group/Process Information	
ID No.: VS-33T	
Control Device ID No.: VS-62C	Control Device Type: Flare
Applicable Regulatory Requirement	
Name: 40 CFR Part 60, Subpart Kb	SOP Index No.: 60KB-VS62C
Pollutant: VOC	Main Standard: [G]§ 60.112b(a)(3)
Monitoring Information	
Indicator: Visual Inspection	
Minimum Frequency: Once per year	
Averaging Period: N/A	
Deviation Limit: Inspections not conducted, or defects discovered and not repaired.	
Periodic Monitoring Text: Visually inspect all components of the vapor collection system for defects, such as cracks, holes, gaps, loose connections, or broken or missing covers or other closure devices, that could result in air emissions.	

Permit Shield

Permit Shield

The Executive Director of the TCEQ has determined that the permit holder is not required to comply with the specific regulation(s) unit, group, or process in this table.

Unit / Group / Process ID No.	Group / Inclusive Units	Regulation	Basi
AKMU-P	N/A	30 TAC Chapter 115, Storage of VOCs	Vessel is less tha

CAUS-1	N/A	30 TAC Chapter 115, Storage of VOCs	Vessel does not s
CAUS-1	N/A	40 CFR Part 60, Subpart Kb	Vessel does not s
CL5898	N/A	30 TAC Chapter 115, Storage of VOCs	Vessel is less tha

CL5898	N/A	40 CFR Part 60, Subpart Kb	Vessel is less than 75 cubic meters capacity.
COOLTOW	N/A	40 CFR Part 63, Subpart Q	Chromium is not used in the cooling water.
COOLTOW2	N/A	40 CFR Part 63, Subpart Q	Chromium is not used in the cooling water.
EMGEN	N/A	40 CFR Part 60, Subpart IIII	Engine manufactured before July 11, 2005.
EMGEN	N/A	40 CFR Part 63, Subpart ZZZZ	Existing emergency stationary RICE with > 500 brake HP at a major source of HAPs and does not operate/is not contractually obligated to be available for > 15 hours per calendar year for the purposes specified later in rule text.
FL-2	N/A	30 TAC Chapter 117, Subchapter B	Flares are exempted from the regulation.
FUEL-2	N/A	30 TAC Chapter 115, Storage of VOCs	Vessel is less than 1,000 gallons capacity.
FUEL-2	N/A	40 CFR Part 60, Subpart Kb	Vessel is less than 75 cubic meters capacity.
H2SO4	N/A	40 CFR Part 60, Subpart Kb	Tank capacity is less than 75 cubic meters.
HE-470	N/A	30 TAC Chapter 115, Storage of VOCs	Process vessel and not a storage vessel.
HE-470	N/A	40 CFR Part 60, Subpart Kb	Process vessel and not a storage vessel.
HE-471	N/A	30 TAC Chapter 115, Storage of VOCs	Process vessel and not a storage vessel.
HE-471	N/A	40 CFR Part 60, Subpart Kb	Process vessel and not a storage vessel.
L1_2-POLY	N/A	30 TAC Chapter 115, Storage of VOCs	Vessel is less than 1,000 gallons capacity.
L1_2-POLY	N/A	40 CFR Part 60, Subpart Kb	Vessel is less than 75 cubic meters capacity.
L3-152	N/A	30 TAC Chapter 115, Storage of VOCs	Vessel does not store volatile organic liquid.
L3-152	N/A	40 CFR Part 60, Subpart Kb	Vessel does not store volatile organic liquid.
L3-260	N/A	30 TAC Chapter 115, Storage of VOCs	Vessel is less than 1,000 gallons capacity.
L3-260	N/A	40 CFR Part 60, Subpart Kb	Vessel is less than 75 cubic meters capacity.
L3-26T-3	N/A	30 TAC Chapter 115, Storage of VOCs	Process vessel and not a storage vessel.
L3-26T-3	N/A	40 CFR Part 60, Subpart Kb	Process vessel and not a storage vessel.
L3-28T-3	N/A	30 TAC Chapter 115, Storage of VOCs	Process vessel and not a storage vessel.
L3-28T-3	N/A	40 CFR Part 60, Subpart Kb	Process vessel and not a storage vessel.

L3-37T-3	N/A	30 TAC Chapter 115, Storage of VOCs	Process vessel and not a storage vessel.
L3-37T-3	N/A	40 CFR Part 60, Subpart Kb	Process vessel and not a storage vessel.
L3-45T-3	N/A	30 TAC Chapter 115, Storage of VOCs	Process vessel and not a storage vessel.
L3-45T-3	N/A	40 CFR Part 60, Subpart Kb	Process vessel and not a storage vessel.
L3-78-3	N/A	30 TAC Chapter 115, Storage of VOCs	Process vessel and not a storage vessel.
L3-78-3	N/A	40 CFR Part 60, Subpart Kb	Process vessel and not a storage vessel.
L3-AF	N/A	30 TAC Chapter 115, Storage of VOCs	Vessel is less than 1,000 gallons capacity.
L3-AF	N/A	40 CFR Part 60, Subpart Kb	Vessel is less than 75 cubic meters capacity.
L3-BLEACH	N/A	30 TAC Chapter 115, Storage of VOCs	Vessel is less than 1,000 gallons capacity.
L3-BLEACH	N/A	40 CFR Part 60, Subpart Kb	Vessel is less than 75 cubic meters capacity.
L3-CL5898	N/A	30 TAC Chapter 115, Storage of VOCs	Vessel is less than 1,000 gallons capacity.
L3-CL5898	N/A	40 CFR Part 60, Subpart Kb	Vessel is less than 75 cubic meters capacity.
L3-POLY	N/A	30 TAC Chapter 115, Storage of VOCs	Vessel is less than 1,000 gallons capacity.
L3-POLY	N/A	40 CFR Part 60, Subpart Kb	Vessel is less than 75 cubic meters capacity.
NEUT-1	N/A	40 CFR Part 60, Subpart Kb	Storage vessel is greater than 75 cubic meters and less than 151 cubic meters storing volatile organic liquid with vapor pressure less than 15.0 kPa.
SPT-AF	N/A	30 TAC Chapter 115, Storage of VOCs	Vessel is less than 1,000 gallons capacity.
SPT-AF	N/A	40 CFR Part 60, Subpart Kb	Vessel is less than 75 cubic meters capacity.
SPT-DIS	N/A	30 TAC Chapter 115, Storage of VOCs	Vessel is less than 1,000 gallons capacity.
SPT-DIS	N/A	40 CFR Part 60, Subpart Kb	Vessel is less than 75 cubic meters capacity.
SURCT	N/A	30 TAC Chapter 115, Surface Coating Operations	Surface coating of fixed immovable structures not included in the list of surface coating processes in 115.420(a).
SURCT	N/A	40 CFR Part 63, Subpart MMMM	Surface coating operations that occur due to facility maintenance operations.
TA-004	N/A	30 TAC Chapter 115, Storage of VOCs	Process vessel and not a storage vessel.

TA-004	N/A	40 CFR Part 60, Subpart Kb	Process vessel and not a storage vessel.
TTANK	N/A	30 TAC Chapter 115, Storage of VOCs	Storage tank has a storage capacity less than 1,000 gallons.
TTANK	N/A	40 CFR Part 60, Subpart Kb	Tank capacity is less than 75 cubic meters.
VE-020	N/A	30 TAC Chapter 115, Storage of VOCs	Process vessel and not a storage vessel.
VE-020	N/A	40 CFR Part 60, Subpart Kb	Process vessel and not a storage vessel.
VE-025	N/A	30 TAC Chapter 115, Storage of VOCs	Process vessel and not a storage vessel.
VE-025	N/A	40 CFR Part 60, Subpart Kb	Process vessel and not a storage vessel.
VE-030	N/A	30 TAC Chapter 115, Storage of VOCs	Vessel is less than 1,000 gallons capacity.
VE-030	N/A	40 CFR Part 60, Subpart Kb	Vessel is less than 75 cubic meters capacity.
VE-101	N/A	30 TAC Chapter 115, Storage of VOCs	Process vessel and not a storage vessel.
VE-101	N/A	40 CFR Part 60, Subpart Kb	Process vessel and not a storage vessel.
VE-102	N/A	30 TAC Chapter 115, Storage of VOCs	Process vessel and not a storage vessel.
VE-102	N/A	40 CFR Part 60, Subpart Kb	Process vessel and not a storage vessel.
VE-170	N/A	30 TAC Chapter 115, Storage of VOCs	Process vessel and not a storage vessel.
VE-170	N/A	40 CFR Part 60, Subpart Kb	Process vessel and not a storage vessel.
VE-171	N/A	30 TAC Chapter 115, Storage of VOCs	Process vessel and not a storage vessel.
VE-171	N/A	40 CFR Part 60, Subpart Kb	Process vessel and not a storage vessel.
VE-350	N/A	30 TAC Chapter 115, Storage of VOCs	Process vessel and not a storage vessel.
VE-350	N/A	40 CFR Part 60, Subpart Kb	Process vessel and not a storage vessel.
VE-401	N/A	30 TAC Chapter 115, Storage of VOCs	Process vessel and not a storage vessel.
VE-401	N/A	40 CFR Part 60, Subpart Kb	Process vessel and not a storage vessel.
VE-450	N/A	30 TAC Chapter 115, Storage of VOCs	Process vessel and not a storage vessel.
VE-450	N/A	40 CFR Part 60, Subpart Kb	Process vessel and not a storage vessel.
VE-451	N/A	30 TAC Chapter 115, Storage of VOCs	Process vessel and not a storage vessel.
VE-451	N/A	40 CFR Part 60, Subpart Kb	Process vessel and not a storage vessel.

VE-471	N/A	30 TAC Chapter 115, Storage of VOCs	Process vessel and not a storage vessel.
VE-471	N/A	40 CFR Part 60, Subpart Kb	Process vessel and not a storage vessel.
VE-472	N/A	40 CFR Part 60, Subpart Kb	Vessel is less than 75 cubic meters capacity.
VE-701	N/A	30 TAC Chapter 115, Storage of VOCs	Process vessel and not a storage vessel.
VE-701	N/A	40 CFR Part 60, Subpart Kb	Process vessel and not a storage vessel.
VE-902	N/A	30 TAC Chapter 115, Storage of VOCs	Process vessel and not a storage vessel.
VE-902	N/A	40 CFR Part 60, Subpart Kb	Process vessel and not a storage vessel.
VE-911	N/A	30 TAC Chapter 115, Storage of VOCs	Process vessel and not a storage vessel.
VE-911	N/A	40 CFR Part 60, Subpart Kb	Process vessel and not a storage vessel.
VS-112	N/A	30 TAC Chapter 115, Vent Gas Controls	Vent gas stream is a combustion unit exhaust stream from a unit which is not being used as a control device for any vent gas stream subject to this division and originating from a non-combustion source.
VS-127T	N/A	30 TAC Chapter 115, Storage of VOCs	Process vessel and not a storage vessel.
VS-127T	N/A	40 CFR Part 60, Subpart Kb	Process vessel and not a storage vessel.
VS-131T	N/A	30 TAC Chapter 115, Storage of VOCs	Process vessel and not a storage vessel.
VS-131T	N/A	40 CFR Part 60, Subpart Kb	Process vessel and not a storage vessel.
VS-174P	N/A	30 TAC Chapter 115, Storage of VOCs	Process vessel and not a storage vessel.
VS-174P	N/A	40 CFR Part 60, Subpart Kb	Process vessel and not a storage vessel.
VS-210T	N/A	30 TAC Chapter 115, Storage of VOCs	Process vessel and not a storage vessel.
VS-210T	N/A	40 CFR Part 60, Subpart Kb	Process vessel and not a storage vessel.
VS-210T-1	N/A	30 TAC Chapter 115, Storage of VOCs	Process vessel and not a storage vessel.
VS-210T-1	N/A	40 CFR Part 60, Subpart Kb	Process vessel and not a storage vessel.
VS-23T	N/A	40 CFR Part 60, Subpart Kb	Tank capacity is less than 75 cubic meters.
VS-23T-1	N/A	30 TAC Chapter 115, Storage of VOCs	Process vessel and not a storage vessel.
VS-23T-1	N/A	40 CFR Part 60, Subpart Kb	Process vessel and not a storage vessel.

VS-24T	N/A	30 TAC Chapter 115, Storage of VOCs	Process vessel and not a storage vessel.
VS-24T	N/A	40 CFR Part 60, Subpart Kb	Tank is defined as a process vessel according §60.111b.
VS-24T-1	N/A	30 TAC Chapter 115, Storage of VOCs	Process vessel and not a storage vessel.
VS-24T-1	N/A	40 CFR Part 60, Subpart Kb	Process vessel and not a storage vessel.
VS-255T	N/A	30 TAC Chapter 115, Storage of VOCs	Tank capacity is less than 1000 gallons
VS-255T	N/A	40 CFR Part 60, Subpart Kb	Tank Capacity is less than 75 cubic meters
VS-259T	N/A	30 TAC Chapter 115, Storage of VOCs	Vessel is less than 1,000 gallons capacity.
VS-259T	N/A	40 CFR Part 60, Subpart Kb	Vessel is less than 75 cubic meters capacity.
VS-262T	N/A	30 TAC Chapter 115, Storage of VOCs	Process vessel and not a storage vessel.
VS-262T	N/A	40 CFR Part 60, Subpart Kb	Process vessel and not a storage vessel.
VS-263T	N/A	40 CFR Part 60, Subpart Kb	Tank capacity is less than 75 cubic meters.
VS-264T	N/A	40 CFR Part 60, Subpart Kb	Material stored is not a volatile organic liquid.
VS-26T	N/A	30 TAC Chapter 115, Storage of VOCs	Process vessel and not a storage vessel.
VS-26T	N/A	40 CFR Part 60, Subpart Kb	Process vessel and not a storage vessel.
VS-26T-1	N/A	30 TAC Chapter 115, Storage of VOCs	Process vessel and not a storage vessel.
VS-26T-1	N/A	40 CFR Part 60, Subpart Kb	Process vessel and not a storage vessel.
VS-28T	N/A	30 TAC Chapter 115, Storage of VOCs	Process vessel and not a storage vessel.
VS-28T	N/A	40 CFR Part 60, Subpart Kb	Process vessel and not a storage vessel.
VS-28T-1	N/A	30 TAC Chapter 115, Storage of VOCs	Process vessel and not a storage vessel.
VS-28T-1	N/A	40 CFR Part 60, Subpart Kb	Process vessel and not a storage vessel.
VS-29T	N/A	30 TAC Chapter 115, Storage of VOCs	Process vessel and not a storage vessel.
VS-29T	N/A	40 CFR Part 60, Subpart Kb	Process vessel and storage vessel.
VS-29T-1	N/A	30 TAC Chapter 115, Storage of VOCs	Process vessel and not a storage vessel.
VS-29T-1	N/A	40 CFR Part 60, Subpart Kb	Process vessel and not a storage vessel.
VS-31T	N/A	30 TAC Chapter 115, Storage of VOCs	Process vessel and not a storage vessel.

VS-31T	N/A	40 CFR Part 60, Subpart Kb	Tank is defined as a process vessel according §60.111b.
VS-31T-1	N/A	30 TAC Chapter 115, Storage of VOCs	Process vessel and not a storage vessel.
VS-31T-1	N/A	40 CFR Part 60, Subpart Kb	Tank is defined as a process vessel according §60.111b.
VS-32T	N/A	30 TAC Chapter 115, Storage of VOCs	Process vessel and not a storage vessel.
VS-32T	N/A	40 CFR Part 60, Subpart Kb	Process vessel and not a storage vessel.
VS-34T	N/A	30 TAC Chapter 115, Storage of VOCs	Process vessel and not a storage vessel.
VS-34T	N/A	40 CFR Part 60, Subpart Kb	Process vessel and not a storage vessel.
VS-34T-1	N/A	30 TAC Chapter 115, Storage of VOCs	Process vessel and not a storage vessel.
VS-34T-1	N/A	40 CFR Part 60, Subpart Kb	Process vessel and not a storage vessel.
VS-37T	N/A	30 TAC Chapter 115, Storage of VOCs	Process vessel and not a storage vessel.
VS-37T	N/A	40 CFR Part 60, Subpart Kb	Process vessel and not a storage vessel.
VS-37T-1	N/A	30 TAC Chapter 115, Storage of VOCs	Process vessel and not a storage vessel.
VS-37T-1	N/A	40 CFR Part 60, Subpart Kb	Process vessel and not a storage vessel.
VS-38T	N/A	30 TAC Chapter 115, Storage of VOCs	Process vessel and not a storage vessel.
VS-38T	N/A	40 CFR Part 60, Subpart Kb	Process vessel and not a storage vessel.
VS-39T	N/A	40 CFR Part 60, Subpart Kb	Tank capacity is less than 75 cubic meters.
VS-41T	N/A	30 TAC Chapter 115, Storage of VOCs	Process vessel and not a storage vessel.
VS-41T	N/A	40 CFR Part 60, Subpart Kb	Process vessel and not a storage vessel.
VS-41T-1	N/A	30 TAC Chapter 115, Storage of VOCs	Process vessel and not a storage vessel.

VS-80T	N/A	30 TAC Chapter 115, Storage of VOCs	Tank capacity is less than 1,000 gallons.
VS-80T	N/A	40 CFR Part 60, Subpart Kb	Tank capacity is less than 75 cubic meters.
VS-81T	N/A	40 CFR Part 60, Subpart Kb	Tank capacity is less than 75 cubic meters.
VS-82T	N/A	40 CFR Part 60, Subpart Kb	Tank capacity is less than 75 cubic meters.
VS-84T	N/A	30 TAC Chapter 115, Storage of VOCs	Process vessel and not a storage vessel.
VS-84T	N/A	40 CFR Part 60, Subpart Kb	Process vessel and not a storage vessel.

VS-85	N/A	30 TAC Chapter 115, Vent Gas Controls	Vent gas stream is a combustion unit exhaust stream from a unit which is not being used as a control device for any vent gas stream subject to this Division and originates from a non-combustion source.
VS-86T	N/A	30 TAC Chapter 115, Storage of VOCs	Process vessel and not a storage vessel.
VS-86T	N/A	40 CFR Part 60, Subpart Kb	Process vessel and not a storage vessel.
VS-86T-1	N/A	30 TAC Chapter 115, Storage of VOCs	Process vessel and not a storage vessel.
VS-86T-1	N/A	40 CFR Part 60, Subpart Kb	Process vessel and not a storage vessel.
VS-88T	N/A	30 TAC Chapter 115, Storage of VOCs	Process vessel and not a storage vessel.
VS-88T	N/A	40 CFR Part 60, Subpart Kb	Process vessel and not a storage vessel.
VS-88T-1	N/A	30 TAC Chapter 115, Storage of VOCs	Process vessel and not a storage vessel.
VS-88T-1	N/A	40 CFR Part 60, Subpart Kb	Process vessel and not a storage vessel.
VS-90T	N/A	30 TAC Chapter 115, Storage of VOCs	Tank capacity is less than 1,000 gallons.
VS-90T	N/A	40 CFR Part 60, Subpart Kb	Tank capacity is less than 75 cubic meters.
VS-91T	N/A	30 TAC Chapter 115, Storage of VOCs	Tank capacity is less than 1,000 gallons.
VS-91T	N/A	40 CFR Part 60, Subpart Kb	Tank capacity is less than 75 cubic meters.

New Source Review Authorization References

New Source Review Authorization References

The New Source Review authorizations listed in the table below are applicable requirements under 30 TAC Chapter 122 and enforceable under this operating permit.

Title 30 TAC Chapter 116 Permits, Special Permits, and Other Authorizations (Other Than Permits By Rule, PSD Permits, or NA Permits) for the Application Area.	
Authorization No.: 19074	Issuance Date: 01/27/2021
Permits By Rule (30 TAC Chapter 106) for the Application Area	
Number: 106.261	Version No./Date: 11/01/2003
Number: 106.262	Version No./Date: 11/01/2003
Number: 106.263	Version No./Date: 11/01/2001
Number: 106.373	Version No./Date: 09/04/2000
Number: 106.454	Version No./Date: 11/01/2001
Number: 106.472	Version No./Date: 09/04/2000

New Source Review Authorization References by Emissions Unit

The following is a list of New Source Review (NSR) authorizations for emission units listed elsewhere in this operating permit. The NSR authorizations are applicable requirements under 30 TAC Chapter 122 and enforceable under this operating permit.

Unit/Group/Process ID No.	Emission Unit Name/Description	New Source Review Authorization**
AKMU-P	ADDITIVE K MAKE-UP POT	19074
AKMU-TK1	ADDITIVE K MAKE-UP TANK	19074
AKMU-TK2	ADDITIVE K MAKE-UP TANK	19074
BLCH-TK	BLEACH TANK	106.472/09/04/2000
CAUS-1	AQUEOUS CAUSTIC SOLUTION TANK	106.472/09/04/2000
CL5898	DISPERSANT SOLUTION TOTE	106.472/09/04/2000
COOLTOW	COOLING TOWER	19074
COOLTOW2	COOLING TOWER 2 (LINE 3)	19074
EMGEN	EMERGENCY GENERATOR	19074
EMGEN2	EMERGENCY GENERATOR 2	19074
FL-2	EVOH FLARE	19074
FUEL-2	DIESEL TANK FOR AUXILIARY EQUIPMENT	106.472/09/04/2000
GC1	ANALYZER VENT	19074
GC2	ANALYZER VENT	19074
GC3	ANALYZER VENT	19074
H2SO4	SULFURIC ACID STORAGE TANK	19074
HE-252	RAC COLUMN O/H CONDENSER (LINE 3)	19074
HE-301	ALCOHOLYSIS O/H CONDENSER (LINE 3)	19074
HE-350	FLASHER O/H CONDENSER (LINE 3)	19074
HE-470	#1 FLUSH SOLUTION TANK (LINE 3)	19074
HE-471	#2 FLUSH SOLUTION TANK (LINE 3)	19074

HE-703	MEAC COLUMN CONDENSER (LINE 3)	19074
HE-751	MEOH COLUMN O/H CONDENSER (LINE 3)	19074
HE-802	WED COLUMN O/H CONDENSER (LINE 3)	19074
HE-821	LIGHT END COLUMN O/H CONDENSER (LINE 3)	19074
HE-841	FLASH VAC CONDENSER (LINE 3)	19074
L1-WBATH	LINE 1 WATER BATH	19074
L1_2-POLY	LINE 1 AND 2 DISTILLATION POLYSTOP TOTE	106.472/09/04/2000
L2-WBATH	LINE 2 WATER BATH	19074
L3-136P-3	EXTRACTION COLUMN (LINE 3)	19074
L3-152	ADDITIVE G STORAGE TANK	106.472/09/04/2000
L3-260	DIESEL FUEL TANK EMGEN2 (LINE 3)	19074
L3-26T-3	STRIPPER BASE STORAGE TANK	19074
L3-28T-3	EVOH PROCESS TANK (LINE 3)	19074
L3-37T-3	#1 SURGE TANK (LINE 3)	19074
L3-45T-3	#2 SURGE TANK (LINE 3)	19074
L3-68-3	EXTRACTION SYSTEM VENT (LINE 3)	19074
L3-72-3	FLUIDIZED BED DRYER EXHAUST AIR FILTER (LINE 3)	19074
L3-78-3	CENTRATE TANK (LINE 3)	19074
L3-93F-3	FUGITIVES (LINE 3)	19074, 106.261/11/01/2003[160783], 106.262/11/01/2003[160783]
L3-AF	LINE 3 ANTIFOAM SOLUTION TOTE	106.472/09/04/2000
L3-BLEACH	LINE 3 BLEACH TOTE	106.472/09/04/2000
L3-CL5898	LINE 3 DISPERSANT SOLUTION TOTE	106.472/09/04/2000
L3-POLY	LINE 3 POLYSTOP TOTE	106.472/09/04/2000
L3-WBATH	LINE 3 WATER BATH	19074
NEUT-1	SULFUR ACID SOLUTION TANK	106.472/09/04/2000

PROFLUSH	PROCESS FLUSH SOLUTION VESSELS	19074
PT-CLEAN	COLD SOLVENT CLEANER	106.454/11/01/2001
RE-101	POLYMERIZATION REACTOR (LINE 3)	19074
RES-1	RECYCLE ETHYLENE SCRUBBER (LINE 1)	19074
RES-2	RECYCLE ETHYLENE SCRUBBER (LINE 2)	19074
RGT-2	RECYCLE GAS TANK (LINE 2)	19074
RTO	REGENERATIVE THERMAL OXIDIZER	19074
SPT-AF	ANTIFOAM SOLUTION TOTE	106.472/09/04/2000
SPT-DIS	DISPERSANT SOLUTION TOTE	106.472/09/04/2000
SURCT	SURFACE COATING FIXED STRUCTURES	106.263/11/01/2001
TA-004	OFF AZ STORAGE TANK	19074
TRUCKLOAD	TRUCK LIQUID LOADING	19074
TTANK	DIESEL TANK FOR COMPRESSOR ENGINE	106.472/09/04/2000
VE-020	-20 DEG REFRIG UNIT TANK (LINE 3)	19074
VE-025	+5 DEG REFRIG UNIT TANK (LINE 3)	19074
VE-030	FLUSH SOLUTION TANK (LINE 3)	19074

**This column may include Permit by Rule (PBR) numbers and version dates, PBR Registration numbers in brackets, Standard Permit Registration numbers, Minor NSR permit numbers, and Major NSR permit numbers.

Appendix A

Acronym List

The following abbreviations or acronyms may be used in this permit:

ACFM..... actual cubic feet per minute
AMOC..... alternate means of control
ARP..... Acid Rain Program
ASTM..... American Society of Testing and Materials
B/PA..... Beaumont/Port Arthur (nonattainment area)
CAM..... Compliance Assurance Monitoring
CD..... control device
CEMS..... continuous emissions monitoring system
CFR..... Code of Federal Regulations
COMS..... continuous opacity monitoring system
CVS..... closed vent system
D/FW..... Dallas/Fort Worth (nonattainment area)
EP..... emission point
EPA..... U.S. Environmental Protection Agency
EU..... emission unit
FCAA Amendments..... Federal Clean Air Act Amendments
FOP..... federal operating permit
gr/100 scf..... grains per 100 standard cubic feet
HAP..... hazardous air pollutant
H/G/B..... Houston/Galveston/Brazoria (nonattainment area)
H_2S..... hydrogen sulfide
ID No..... identification number
lb/hr..... pound(s) per hour
MACT..... Maximum Achievable Control Technology (40 CFR Part 63)
MMBtu/hr..... Million British thermal units per hour
NA..... nonattainment
N/A..... not applicable
NADB..... National Allowance Data Base
NESHAP.....National Emission Standards for Hazardous Air Pollutants (40 CFR Part 61)
NO_x..... nitrogen oxides
NSPS..... New Source Performance Standard (40 CFR Part 60)
NSR..... New Source Review
ORIS..... Office of Regulatory Information Systems
Pb..... lead
PBR..... Permit By Rule
PEMS..... predictive emissions monitoring system
PM..... particulate matter
ppmv..... parts per million by volume
PRO..... process unit
PSD..... prevention of significant deterioration
psia..... pounds per square inch absolute
SIP..... state implementation plan
SO_2..... sulfur dioxide
TCEQ.....Texas Commission on Environmental Quality
TSP..... total suspended particulate
TVP..... true vapor pressure
U.S.C..... United States Code
VOC..... volatile organic compound
